AXIS M30 Series

Product overview

Product overview

1 SD card slot (microSD)
2 Status LED
3 RJ45 connector
4 Control button
How to access the product

AXIS IP Utility and AXIS Camera Management are recommended methods for finding Axis products on the network and assigning them IP addresses in Windows®. Both applications are free and can be downloaded from axis.com/support.

The product can be used with the following browsers:
- Chrome™ (recommended), Firefox®, Edge®, or Opera® with Windows®
- Chrome™ (recommended) or Safari® with OS X®
- Chrome™ or Firefox® with other operating systems.

If you need more information about recommended browsers, go to axis.com/browser-support

How to access the product from a browser

1. Start a web browser.
2. Enter the IP address or host name of the Axis product in the browser's address field.
   - To access the product from a Mac computer (OS X), go to Safari, click on Bonjour and select the product from the drop-down list.
   - If you do not know the IP address, use AXIS IP Utility to locate the product on the network. For information about how to discover and assign an IP address, see the document Assign an IP Address and Access the Video Stream on Axis Support web at axis.com/support

   Note
   - To show Bonjour as a browser bookmark, go to Safari > Preferences.
3. Enter your username and password. If this is the first time the product is accessed, the root password must first be configured.
4. The product's live view page opens in your browser.

About secure passwords

Important
- When setting the initial password, the password is sent in clear text over the network. If there is a risk of network sniffing, first set up a secure and encrypted HTTPS connection before resetting the passwords.

The device password is the primary protection for the data and services. Axis' products do not impose a password policy as products may be used in various types of installations, but to protect your data do the following:
- Don't use the default password that comes with the products.
- Use a password with at least 8 characters, preferably using a password generator.
- Don't expose the password.
- Change password at a recurring interval, at least once a year.

Set a password for the root account

Important
- The default administrator user name root cannot be deleted. If the password for root is lost, the product must be reset to the factory default settings.
AXIS M30 Series

How to access the product

The default root account has full privileges and should be reserved for administrative tasks. Always create a user account with limited privileges for daily use. This reduces the exposure of the administrative account.

1. Make sure to follow the instructions about secure passwords, see About secure passwords on page 5.
2. Type a password and then retype it to confirm the spelling.
3. Click Create login. The password has now been configured.
About the product's built-in help

You can access the built-in help through your product's web page. The help provides more detailed information on the product's features and their settings.

Image quality

About capture modes

A capture mode consists of a resolution and the corresponding frame rate available in the product. The capture mode setting affects the camera's field of view and aspect ratio.

The lower resolution capture mode is cropped out from the highest resolution.

The image shows how the field of view and aspect ratio can change between two different capture modes.

How to select capture mode

What capture mode to choose depends on the requirements of frame rate and resolution for the specific surveillance setup. For specifications about available capture modes, see the product's datasheet. To find the latest version of the datasheet, go to axis.com

How to hide parts of the image with privacy masks

If you want to hide parts of the image due to privacy reasons, use one or several privacy masks.

What is a privacy mask?
A privacy mask is a user-defined area that prohibits users from viewing parts of the monitored area. Privacy masks appear as blocks of solid color and are applied on the video stream.

Privacy masks are present on all snapshots, recorded video, and requested streams. They can not be bypassed through the VAPIX® application programming interface (API).

**Important**
If you add many privacy masks, this may affect the product's performance.

**How to create a privacy mask**
To create or edit a privacy mask, go to Settings > Privacy mask.

**How to reduce noise in low-light conditions**
To reduce noise in low-light conditions, you can adjust one or more of the following settings:

- Make sure that the exposure mode is automatic.

**Note**
Increasing the max shutter value can result in motion blur.

- The shutter speed should be as slow as possible, which means you should set max shutter to the highest possible value.
- Reduce sharpness in the image.
- Try lowering the max gain value.

**How to select exposure mode**
There are several exposure mode options in the camera that adjusts aperture, shutter speed, and gain to improve image quality for specific surveillance scenes. Go to Settings > Image > Exposure and select between the following exposure modes:

- For most use cases, select Automatic exposure.
- For environments with certain artificial lighting, for example fluorescent lighting, select Flicker-free.
  Select the same frequency as the power line frequency.
- For environments with certain artificial light and bright light, for example outdoors with fluorescent lighting at night and sun during daytime, select Flicker-reduced.
  Select the same frequency as the power line frequency.
- To lock the current exposure settings, select Hold current.

**How to monitor long and narrow areas**
Use corridor format to better utilize the full field of view in a long and narrow area, for example a staircase, hallway, road, or tunnel.
1. Depending on your product, turn the camera or the 3-axis lens in the camera 90° or 270°.

2. Go to Settings > Stream > Orientation on the product’s webpage and rotate the view 90° or 270°.

Find out more at axis.com/axis-corridor-format

**How to enhance facial recognition**

To better recognize the face of a person passing by the camera, you can set the optimal pixel resolution with the camera's pixel counter.

1. Go to Settings > System > Orientation and click

2. Adjust the size and placement of the rectangle in the camera's live view around the area of interest, for example where the faces of passing persons are expected to appear. You can then see the number of pixels represented by the sides of the rectangle.

**Note**

You can use an object of a known size in the view as a reference to decide how much resolution is needed for recognition.
**About view area**

A view area is a cropped part of the full view. You can stream and store the view area instead of the full view to minimize bandwidth and storage needs. If you enable PTZ for the view area, you can pan, tilt and zoom within it. By using a view area you can remove parts of the full view, for example sky.

When you set up a view area, we recommend you to set the video stream resolution to the same size as or smaller than the view area size. If you set the video stream resolution larger than the view area size it implies digitally scaled up video after sensor capture, which requires more bandwidth without adding image information.

**How to handle scenes with strong backlight**

Use WDR to make both dark and bright areas of the image visible.

1. Go to Settings > Image.
2. Turn on WDR under Wide dynamic range.

![Image without WDR.](image)

![Image with WDR.](image)

**Note**

If you use WDR, you may experience some WDR artifacts in the image.

Find out more about WDR and how to use it at [axis.com/web-articles/wdr](http://axis.com/web-articles/wdr)

**Overlays**

**About overlays**

Overlays are superimposed over the video stream. They are used to provide extra information during recordings, such as a timestamp, or during product installation and configuration.
**AXIS M30 Series**

**Setup**

**How to show a text overlay when the camera detects motion**

This example explains how to display the text “Motion detected” when the camera detects motion:

1. Go to Settings > Overlay.
2. Enter #D in the text field.
3. Choose alignment, text size and appearance.
4. Include the text overlay.
5. Go to System > Events > Action rules.
6. Create an action rule with AXIS Video Motion Detection as trigger.
7. From the list of actions, select Overlay text.
8. Type “Motion detected”.
9. Set the duration.

**Streaming and storage**

**How to choose video compression format**

Deciding which compression method to choose depends on your viewing requirements, and on the properties of your network. The available options are:

**Motion JPEG**

Motion JPEG or MJPEG is a digital video sequence that is made up of a series of individual JPEG images. These images are then displayed and updated at a rate sufficient to create a stream that shows constantly updated motion. For the viewer to perceive motion video the rate must be at least 16 image frames per second. Full motion video is perceived at 30 (NTSC) or 25 (PAL) frames per second.

The Motion JPEG stream uses considerable amounts of bandwidth, but provides excellent image quality and access to every image contained in the stream.

**H.264 or MPEG-4 Part 10/AVC**

- **Note**: H.264 is a licensed technology. The Axis product includes one H.264 viewing client license. Installing additional unlicensed copies of the client is prohibited. To purchase additional licenses, contact your Axis reseller.

H.264 can, without compromising image quality, reduce the size of a digital video file by more than 80% compared to the Motion JPEG format and by as much as 50% compared to the MPEG-4 standard. This means that less network bandwidth and storage space are required for a video file. Or seen another way, higher video quality can be achieved for a given bitrate.

**H.265 or MPEG-H Part 2/HEVC**

- **Note**: H.265 is licensed technology. The Axis product includes one H.265 viewing client license. Installing additional unlicensed copies of the client is prohibited. To purchase additional licenses, contact your Axis reseller.

H.265 can, without compromising image quality, reduce the size of a digital video file by as much as 50% more than with the H.264 standard.

Find out more at [axis.com/compression-formats](http://axis.com/compression-formats)
**AXIS M30 Series**

**Setup**

**How to reduce bandwidth and storage**

**Important**
If you reduce the bandwidth it can result in less details in the picture.

2. Go to Settings > Stream.
3. Do one or more of the following:
   - Turn on the Zipstream functionality and select the desired level.
   - Turn on dynamic GOP and set a high GOP length value.
   - Increase the compression.
   - Turn on dynamic FPS.

**How to set up network storage**

To store recordings on the network, you need to set up network storage:

1. Go to Settings > System > Storage.
2. Click Setup under Network storage.
3. Enter the IP address of the host server.
4. Enter the name of the shared location on the host server.
5. Move the switch if the share requires a login, and enter username and password.
6. Click Connect.

**Events**

**About events**

The event pages allow you to configure your product to perform actions when different events occur. For example, the product can start a recording or send an email notification when motion is detected. The set of conditions that defines how and when the action is triggered is called an action rule.

**How to trigger an action**

1. Go to Settings > System > Events to set up an action rule. The action rule defines when the product will perform certain actions. Action rules can be setup as scheduled, recurring, or for example, triggered by motion detection.
2. Select what **Trigger** must be met to trigger the action. If you specify more than one trigger for the action rule, all of them must be met to trigger the action.
3. Select which **Action** the camera should perform when the conditions are met.

**Note**
If you make changes to an active action rule, the action rule needs to be restarted for the changes to take effect.

**Note**
If you change the definition of a stream profile used in an action rule, you need to restart any action rules that use that stream profile.
**How to record video when the camera detects motion**

This example explains how to set up the camera to start recording to the SD card five seconds before it detects motion and to stop one minute after.

Make sure the AXIS Video Motion Detection application is running:

1. Go to Settings > Apps > AXIS Video Motion Detection.
2. Start the application if it is not already running.
3. Make sure you have set up the application according to your needs.

Create an action rule:

4. Go to Settings > System > Events and add an action rule.
5. Type a name for the action rule.
6. From the list of triggers, select Applications and then select AXIS Video Motion Detection (VMD).
7. From the list of actions, select Record video.
8. Select an existing stream profile or create a new one.
9. Set the pre-trigger time to 5 seconds.
10. Set the post-trigger time to 60 seconds.
11. Select SD card from the list of storage options.
12. Click Ok.

**Applications**

**About applications**

AXIS Camera Application Platform (ACAP) is an open platform that enables third parties to develop analytics and other applications for Axis products. To find out more about available applications, downloads, trials and licenses, go to axis.com/applications

To find the user manuals for Axis applications, go to axis.com

**Note**

- It is recommended to run one application at a time.
- Avoid running applications when the built-in motion detection is active.

**AXIS People Counter**

AXIS People Counter is an analytic application that can be installed on a network camera.

The counter is embedded in the camera which means you do not need a dedicated computer to run the application. AXIS People Counter is intended for retail environments, like stores or shopping malls, or other environments where you want to count people.
AXIS M30 Series

Setup
AXIS M30 Series

Troubleshooting

How to reset to factory default settings

**Important**

Reset to factory default should be used with caution. A reset to factory default resets all settings, including the IP address, to the factory default values.

To reset the product to the factory default settings:
1. Disconnect power from the product.
2. Press and hold the control button while reconnecting power. See Product overview.
3. Keep the control button pressed for 15–30 seconds until the status LED indicator flashes amber.
4. Release the control button. The process is complete when the status LED indicator turns green. The product has been reset to the factory default settings.
5. Use the installation and management software tools to assign an IP address, set the password, and access the video stream.

The installation and management software tools are available from the support pages on axis.com/support

How to check the current firmware

Firmware is the software that determines the functionality of network devices. One of your first actions when troubleshooting a problem should be to check the current firmware version. The latest version may contain a correction that fixes your particular problem.

To check the current firmware:
1. Go to the product’s webpage.
2. Click on the help menu.
3. Click About.

How to upgrade the firmware

**Important**

Preconfigured and customized settings are saved when the firmware is upgraded (provided that the features are available in the new firmware) although this is not guaranteed by Axis Communications AB.

**Note**

When you upgrade the product with the latest firmware, the product receives the latest functionality available. Always read the upgrade instructions and release notes available with each new release before upgrading the firmware. To find the latest firmware and the release notes, go to axis.com/support/firmware

1. Download the latest firmware file to your computer, available free of charge at axis.com/support/firmware
2. Log in to the product as an administrator.
3. Go to Settings > System > Maintenance in the product’s webpage and follow the instructions.
4. The upgrade takes a while, don’t break the power to the product. When the upgrade is finished, the product restarts automatically.
### AXIS M30 Series

**Troubleshooting**

AXIS Camera Management can be used for multiple upgrades. Find out more at axis.com/products/axis-camera-management

**Technical issues, clues and solutions**

If you can't find what you're looking for here, try the troubleshooting section at axis.com/support

#### Problems upgrading the firmware

<table>
<thead>
<tr>
<th>Issue</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Firmware upgrade failure</td>
<td>If the firmware upgrade fails, the product reloads the previous firmware. The most common reason is that the wrong firmware file has been uploaded. Check that the name of the firmware file corresponds to your product and try again.</td>
</tr>
</tbody>
</table>

#### Problems setting the IP address

<table>
<thead>
<tr>
<th>Issue</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>The product is located on a different subnet</td>
<td>If the IP address intended for the product and the IP address of the computer used to access the product are located on different subnets, you cannot set the IP address. Contact your network administrator to obtain an IP address.</td>
</tr>
<tr>
<td>The IP address is being used by another device</td>
<td>Disconnect the Axis product from the network. Run the ping command (in a Command/DOS window, type ping and the IP address of the product):</td>
</tr>
<tr>
<td>- If you receive: Reply from &lt;IP address&gt;: bytes=32; time=10...</td>
<td>this means that the IP address may already be in use by another device on the network. Obtain a new IP address from the network administrator and reinstall the product.</td>
</tr>
<tr>
<td>- If you receive: Request timed out, this means that the IP address</td>
<td>is available for use with the Axis product. Check all cabling and reinstall the product.</td>
</tr>
<tr>
<td>Possible IP address conflict with another device on the same subnet</td>
<td>The static IP address in the Axis product is used before the DHCP server sets a dynamic address. This means that if the same default static IP address is also used by another device, there may be problems accessing the product.</td>
</tr>
</tbody>
</table>

#### The product cannot be accessed from a browser

<table>
<thead>
<tr>
<th>Issue</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cannot log in</td>
<td>When HTTPS is enabled, ensure that the correct protocol (HTTP or HTTPS) is used when attempting to log in. You may need to manually type http or https in the browser’s address field.</td>
</tr>
<tr>
<td>The IP address has been changed by DHCP</td>
<td>If the password for the user root is lost, the product must be reset to the factory default settings. See How to reset to factory default settings.</td>
</tr>
<tr>
<td>Certificate error when using IEEE 802.1X</td>
<td>IP addresses obtained from a DHCP server are dynamic and may change. If the IP address has been changed, use AXIS IP Utility or AXIS Camera Management to locate the product on the network. Identify the product using its model or serial number, or by the DNS name (if the name has been configured).</td>
</tr>
<tr>
<td>Certificate error when using IEEE 802.1X</td>
<td>If required, a static IP address can be assigned manually. For instructions, go to axis.com/support.</td>
</tr>
</tbody>
</table>

#### The product is accessible locally but not externally

<table>
<thead>
<tr>
<th>Issue</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Router configuration</td>
<td>Check that your router allows incoming data traffic to the Axis product. The router must support UPnP®.</td>
</tr>
<tr>
<td>Firewall protection</td>
<td>Check the Internet firewall with your network administrator.</td>
</tr>
</tbody>
</table>

#### Problems with streaming

<table>
<thead>
<tr>
<th>Issue</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Multicast H.264 only accessible by local clients</td>
<td>Check if your router supports multicasting, or if the router settings between the client and the product need to be configured. The TTL (Time To Live) value may need to be increased.</td>
</tr>
</tbody>
</table>
Troubleshooting

No multicast H.264 displayed in the client
Check with your network administrator that the multicast addresses used by the Axis product are valid for your network.

Check with your network administrator to see if there is a firewall preventing viewing.

Poor rendering of H.264 images
Ensure that your graphics card is using the latest driver. The latest drivers can usually be downloaded from the manufacturer's website.

Color saturation is different in H.264 and Motion JPEG
Modify the settings for your graphics adapter. Go to the adapter's documentation for more information.

Lower frame rate than expected
- See Performance considerations on page 17.
- Reduce the number of applications running on the client computer.
- Limit the number of simultaneous viewers.
- Check with the network administrator that there is enough bandwidth available.
- Lower the image resolution.
- In the product's webpage, set a capture mode that prioritizes frame rate. Changing the capture mode to prioritize frame rate might lower the maximum resolution depending on the product used and capture modes available.
- The maximum frames per second is dependent on the utility frequency (60/50 Hz) of the Axis product.

Can’t select H.265 encoding in live view
Web browsers do not support H.265 decoding. Use a video management system or application supporting H.265 decoding.

Problems retrieving additional video streams

'Video Error' displayed in AXIS Companion, or
The camera is designed to deliver up to four different streams. If a fifth unique stream is requested, the camera will not be able to provide it, and an error message is displayed. The error message depends on the way the stream is requested. The streams are used on a first come, first served basis. Examples of instances using a stream are:
- Live viewing in a web browser or other application
- While recording – continuous or motion triggered recording
- An event using images on the camera, for example an event sending an e-mail with an image every hour
- An installed application, such as Axis Video Motion Detection, will always use a stream regardless of whether it is used or not.

The camera can deliver more than four simultaneous streams provided the configuration of any additional stream is identical to any of the first four streams. Identical configuration implies exactly the same resolution, frame rate, compression, video format, rotation etc. For more information see the white paper "Max number of unique video stream configurations", available at axis.com

'Stream: Error. Something went wrong. Maybe there are too many viewers.' in Chrome/Firefox, or
'S03 service unavailable' error in Quick Time, or
'Camera not available' displayed in AXIS Camera Station, or
'Error reading video stream' message in browser when using the Java applet

Performance considerations

When setting up your system, it is important to consider how various settings and situations affect the performance. Some factors affect the amount of bandwidth (the bitrate) required, others can affect the frame rate, and some affect both. If the load on the CPU reaches its maximum, this also affects the frame rate.

The following factors are the most important to consider:
- High image resolution or lower compression levels result in images containing more data which in turn affects the bandwidth.
- Access by large numbers of Motion JPEG or unicast H.264 clients affects the bandwidth.
- Simultaneous viewing of different streams (resolution, compression) by different clients affects both frame rate and bandwidth.
Troubleshooting

Use identical streams wherever possible to maintain a high frame rate. Stream profiles can be used to ensure that streams are identical.

- Accessing Motion JPEG and H.264 video streams simultaneously affects both frame rate and bandwidth.
- Heavy usage of event settings affects the product's CPU load which in turn affects the frame rate.
- Using HTTPS may reduce frame rate, in particular if streaming Motion JPEG.
- Heavy network utilization due to poor infrastructure affects the bandwidth.
- Viewing on poorly performing client computers lowers perceived performance and affects frame rate.
- Running multiple AXIS Camera Application Platform (ACAP) applications simultaneously may affect the frame rate and the general performance.
AXIS M30 Series

Specifications

To find the latest version of the product’s datasheet, go to the product page on axis.com and locate Support & Documentation.

LED indicators

<table>
<thead>
<tr>
<th>Status LED</th>
<th>Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unlit</td>
<td>Connection and normal operation.</td>
</tr>
<tr>
<td>Green</td>
<td>Shows steady green for 10 seconds for normal operation after startup completed.</td>
</tr>
<tr>
<td>Amber</td>
<td>Steady during startup. Flashes during firmware upgrade or reset to factory default.</td>
</tr>
<tr>
<td>Amber/Red</td>
<td>Flashes amber/red if network connection is unavailable or lost.</td>
</tr>
<tr>
<td>Red</td>
<td>Firmware upgrade failure.</td>
</tr>
</tbody>
</table>

SD card slot

**NOTICE**

- Risk of damage to SD card. Do not use sharp tools, metal objects, or excessive force when inserting or removing the SD card. Use your fingers to insert and remove the card.
- Risk of data loss and corrupted recordings. Do not remove the SD card while the product is running. Unmount the SD card from the product’s webpage before removal.

This product supports microSD/microSDHC/microSDXC cards (not included).

For SD card recommendations, see axis.com

Buttons

**Control button**

The control button is used for:

- Resetting the product to factory default settings. See *How to reset to factory default settings on page 15.*
- Connecting to an AXIS Video Hosting System service. To connect, press and hold the button for about 3 seconds until the status LED flashes green.

Connectors

**Network connector**

RJ45 Ethernet connector with Power over Ethernet (PoE).
