Overview

The S732DV fiber links provide transmission of one-way video and two-way multiprotocol data over one or two multimode optical fibers. A complete system consists of a transmitter and a receiver. The links can be supplied as either a standalone module or as a rack card that can be installed in a standard 19-inch card cage.

Video Processing

The units utilize 8-bit video processing of the video component along with a signal-to-noise ratio >55 dB that assures clean, noise-free video at the receiver.

Data Translation

The data functions include the unique data translation feature, which allows one data format to be input and a different data format to be output. Data formats are selected during installation and can be easily changed in the field via rotary switch.

Superior Diagnostics

The SMARTS™ diagnostic technology provides an extensive set of built-in diagnostic tools including a video test pattern generator that allows failures to be diagnosed from the monitor. LEDs provide a visual indication of the operating status of the equipment.

CWDM Technology

Certain models of the S732DV series incorporate Coarse Wavelength Division Multiplexer (CWDM) technology for maximum distance capability using a single multimode fiber.
