AT/AR1000 & AR2000 Series
IFS Audio Transmitter/Receiver and Transceiver

OVERVIEW
The IFS AT/AR1000 Series audio transmitter and receiver provide one-way transmission of an audio signal on one optical fiber. The IFS AR2000 Series audio transceiver provides bi-directional transmission of one audio signal on one or two optical fibers. The modules use frequency modulation (FM) for superior transmission of balanced or unbalanced line-level audio (2.2V peak-to-peak). Models within this series are available for use with multimode or single mode optical fiber. Plug-and-play design ensures ease of installation requiring no electrical or optical adjustments. The modules incorporate power and carrier detect status indicating LED’s for monitoring proper system operation. The modules are available in either stand-alone or rack mount versions.

APPLICATION EXAMPLES
• Transmission of Stage Mics from Pre-amp to Amplifier
• Recording Studios and Post-Production Facilities
• Transmission of Broadcast Audio Feeds
• Elimination of EMI/RFI Interference in Audio Cables
• Optical Isolation for Elimination of Ground Loop Noise

Options
Add '-R3' to Model Number for R3 Rack Mount - No Charge (Requires R3 Rack purchased separately)

*Optical transmission distance is limited to optical loss of the fiber and any additional loss introduced by connectors, splices and patch panels. Distance can also be limited by fiber bandwidth. **For 50/125 Fiber, subtract 4 dB from Optical Power Budget.

All accessories are third party manufactured. ✧ WDMA must mate with a WDMB
