1 Name and parts

1. Vibration switch
2. Hidden camera scan Blink/On/Off
3. Sensitivity adjustment
4. Back cover

2 Package content

1. Vibration switch
2. Hidden camera scan Blink/On/Off
3. Sensitivity adjustment
4. Back cover

3 Power supply

1. Vibration switch
2. Hidden camera scan Blink/On/Off
3. Sensitivity adjustment
4. Back cover

4 RF signal strength colored light array / Silent vibration alert mode

1. Vibration switch
2. Hidden camera scan Blink/On/Off
3. Sensitivity adjustment
4. Back cover

5 Operation

1. Vibration switch
2. Hidden camera scan Blink/On/Off
3. Sensitivity adjustment
4. Back cover

5.2 If ten colored LED still keep lighting, it means the surrounding signal is very strong.
5.3 When the surrounding signal is too strong, it may influence the real target finding. In this situation, switch the sensitivity adjustment to Low and pull back the antenna. (WiFi is also a RF signal)
5.4 RF sensitivity adjustment can be used for a confirmation of irregular signal finding. Switch the sensitivity to low and approach to the suspected target. If the signal strength is still strong, the view finder can be turned on for the final check.
5.5 Switch View Finder to On or Blink to find the hidden camera lens.
5.6 Look through the view finder from the obverse side of the device.
5.7 The hidden lens will flash when the laser LED light spot it as shown in the illustrations below.

4.2 Silent Covert Pocket Vibration Mode: You can place this small gem in your pocket and when it detects eavesdropping, it will alert you by silently vibrating. You will know in an instant if it detects an RF bug, cell phone bug or sends a GPS transmission.
(The RF detector must be on)

5.1 Pull up the antenna and switch to High Sensitivity. At the time the device is on, ten colored LED lights blink and it leaves 1-3 LED lighting in the detection mode.
