Overview

Features

- SNC-ZB550/ZM550/ZM551 are IPELA HYBRID-compatible cameras.
  These cameras feature SLOC technology, which enables HD images and SD video images to be sent simultaneously over an IP network using just one coaxial cable.
- High-quality Full HD (1080P) real-time monitoring, up to 30 fps. (SNC-CH220/CH260/DH220/DH220T/ DH260)
- High-quality HD (720P) live images from camera can be monitored at a maximum frame rate of 30 fps. (SNC-CH115/CH120/CH160/DH120/DH120T/ DH160)
- Live images can be streamed in high-quality with maximum SXGA (1280 × 1024) image size. (SNC-CH115/CH120/CH160/CH220/CH260/ DH120/DH120T/DH160/DH220/DH220T/DH260/ ZB550/ZM550/ZM551)
- High quality real-time streaming, up to image size 1920 × 1440. (SNC-CH220/CH260/DH220/DH220T/ DH260)
- Exmor CMOS sensor enables high-quality images for streaming.
- NR enables clearer images for streaming in the low lightness environment.
- Three video compression modes (video codecs) JPEG/MPEG4/H.264 are supported.
- Single codec mode and dual codec mode are available.
- Easy Focus enables easier focus adjustment when it is installed.
- Up to 5 users can view images from one camera at the same time.
- Date/time can be superimposed on the image.
- Compatible with AC 24V/DC 12V. (SNC-ZB550/ ZM550/ZM551)

How to Use This User’s Guide

This User’s Guide explains how to operate the Network Camera from a computer. The User’s Guide is designed to be read on the computer display. This section gives tips on making the most of the User’s Guide-read it before you operate the camera.

Jumping to a related page
When you read the User’s Guide on the computer display, you can click on a sentence to jump to a related page.

Software display examples
Note that the displays shown in the User’s Guide are explanatory examples. Some displays may be different from the ones that appear in actual use. The illustrations of the camera and menu display in the User’s Guide show the SNC-CH120 as an example.

Printing the User’s Guide
Depending on your system, certain displays or illustrations in the User’s Guide, when printed out, may differ from those that appear on your screen.

Installation Manual (printed matter)
The supplied Installation Manual describes the names and functions of parts and controls of the Network Camera, connection examples, and how to set up the camera. Be sure to read the Installation Manual before hand.

System Requirements

The following computer environment is necessary for the computer to display images and the controls of the camera.
(November 2014)

Common

OS
Microsoft Windows XP, Windows Vista (32bit version only), Windows 7 (32-bit version, 64-bit version), Windows 8 Pro (32-bit version, 64-bit version)*, Windows 8.1 Pro (32-bit version, 64-bit version)*
Authorized editions:
Windows XP: Professional
Windows Vista: Ultimate, Business
Windows 7: Ultimate, Professional
Windows 8: Pro
Windows 8.1: Pro
Microsoft DirectX 9.0c or higher
Web Browser
Windows Internet Explorer Ver. 7.0, Ver. 8.0, Ver. 9.0, Ver. 10.0*
Firefox Ver. 25.0 (Plug-in free viewer only)
Safari Ver. 5.1 (Plug-in free viewer only)
Google Chrome Ver. 31.0 (Plug-in free viewer only)

SNC-CH115/CH120/CH160/CH120/DH120/DH120T/DH160/EB520/EM520/EM521/ZB550/ZM550/ZM551

CPU
Intel Core 2 Duo, 2 GHz or higher
Memory
1 GB or more
Display
1600 × 1200 pixels or higher

SNC-CH220/CH260/DH220/DH220T/DH260

CPU
Intel Core 2 Duo, 2.33 GHz or higher
Memory
2 GB or more
Display
1600 × 1200 pixels or higher (2560 × 1600 pixels or higher is recommended)

* In case of Windows 8 or Windows 8.1, use the Internet Explorer desktop user interface (desktop UI) edition.
The Preparation section explains what the administrator has to prepare for monitoring images after installation and connection of the camera.

Assigning the IP Address to the Camera

To connect the camera to a network, you need to assign a new IP address to the camera when you install it for the first time.

Before starting, connect the camera, referring to “Connecting the Camera to a Local Network” in the supplied Installation Manual. Consult the administrator of the network about the assigned IP address.

Assigning an IP address using SNC toolbox

1. Insert the CD-ROM in your CD-ROM drive. A cover page appears automatically in your Web browser. If it does not appear automatically in the Web browser, double-click the index.htm file on the CD-ROM.

   When you are using Windows Vista, the “Auto play” pop-up may appear.

2. Click the Setup icon of SNC toolbox. The “File Download” dialog appears.

3. Click File Open.

4. Install “SNC toolbox” on your computer using the wizard. For details of the software installation and usage, see the Application Guide.

5. Assign the IP address. Assign the IP address using the installed SNC toolbox. For details, see “Using the SNC toolbox” - “Assigning an IP address” in the Application Guide.

Tips

- Download the latest installer or Application Guide of SNC toolbox from the following URL: http://www.sony.net/ipela/snc
- SNC toolbox stands for Sony Network Camera toolbox.
Accessing the Camera Using the Web Browser

After the IP address has been assigned to the camera, check that you can actually access the camera using the Web browser installed on your computer. Use Internet Explorer as a Web browser.

1. Start the Web browser on the computer and type the IP address of the camera in the URL address bar.

   ![Image](https://via.placeholder.com/150)

   The viewer window is displayed.

   **Display sample**

   ![Image](https://via.placeholder.com/150)

**Note**

When accessing the camera, images will not be displayed in the following conditions.

- When the maximum number of viewers exceeds 5
  However, if the e-Mail (SMTP) function or the FTP client function is set to On, the maximum number of viewers will be 3.
- The bit rate including new requests exceeds 16Mbps
- Depending on the setup environment, video may become unclear even when being viewed by less than the maximum number of viewers. If this occurs, reduce the number of viewers, lower the bit rate, or decrease the size of the picture (SNC-ZB550/ZM550/ZM551).

**Using the SSL function**

**Note**

The model on sale in China does not support the SSL function.

---

When Internet Explorer is used

When you enter the camera IP address, “Certificate Error” may appear according to the status of the certificate set on the camera. In this case, click Continue to this website (not recommended), to continue.

The welcome page appears (in SSL communication).

---

When “Allow HTTP connection for some clients” (page 47) is checked

To use HTTP and SSL connections separately to access, enter the following in the address box of the browser.

**For HTTP connection**

Address: http://192.168.0.100

**For SSL connection**

Address: https://192.168.0.100

---

When the viewer of the camera is displayed for the first time

“Security Warning” is displayed. When you click Yes, ActiveX control is installed and the viewer is displayed.
Notes
• If Automatic configuration is enabled in the Local Area Network (LAN) settings of Internet Explorer, the image may not be displayed. In that case, disable Automatic configuration and set the Proxy server manually. For the setting of the Proxy server, consult your network administrator.
• When you install ActiveX Control, you should be logged in to the computer as Administrator.

Tip
The software is optimized for Internet Explorer using medium font.

To display the viewer correctly
To operate the viewer correctly, set the security level of Internet Explorer to Medium or lower, as follows:

1 Select Tools from the menu bar for Internet Explorer, then select Internet Options and click the Security tab.

2 Click the Internet icon (when using the camera via the Internet), or Local intranet icon (when using the camera via a local network).

3 Set the slider to Medium or lower. (If the slider is not displayed, click Default Level.)

When using antivirus software, etc., on the computer
• When you use antivirus software, security software, personal firewall or pop-up blocker on your computer, the camera performance may be reduced, for example, the frame rate for displaying the image may be lower.
• The Web page displayed when you log in to the camera uses JavaScript. The display of the Web page may be affected if you use antivirus software or other software described above on your computer.
Basic Configuration by the Administrator

You can monitor the camera image by logging in with the initial conditions set for this network camera. You can also set various functions according to the installing position, network conditions or purpose of the camera. We recommend you configure the following items before monitoring images from the camera.

<table>
<thead>
<tr>
<th>Setting contents</th>
<th>Setting menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set the format of the image sent from the camera.</td>
<td>Video codec Tab (page 37)</td>
</tr>
<tr>
<td>Select the White Balance mode according to the installation position.</td>
<td>White balance (page 34)</td>
</tr>
<tr>
<td>Select the brightness of the image sent from the camera.</td>
<td>Exposure (page 34)</td>
</tr>
<tr>
<td></td>
<td>Brightness (page 35)</td>
</tr>
<tr>
<td>Select the quality of the image sent from the camera.</td>
<td>Video codec Tab (page 37)</td>
</tr>
<tr>
<td>Select the view size of the image.</td>
<td>View size (page 14)</td>
</tr>
<tr>
<td>Synchronize the date and time of the camera with those of the computer.</td>
<td>Date &amp; time Tab (page 28)</td>
</tr>
<tr>
<td>Make the setting for sending the monitor image attached to an e-mail.</td>
<td>e-Mail (SMTP) Menu (page 63)</td>
</tr>
<tr>
<td>Set the user access right for the camera.</td>
<td>User Menu (page 58)</td>
</tr>
<tr>
<td>Set a place to be watched beforehand.</td>
<td>Preset position Menu (page 60)</td>
</tr>
<tr>
<td>Prepare a panorama image.</td>
<td>To create a full image (page 19)</td>
</tr>
</tbody>
</table>
Precautions for Preventing Access to the Camera by an Unintended Third Party

The camera may be accessed by an unintended third party on the network, depending on the usage environment. Changing the user name and password of the camera administrator from the default settings is highly recommended for security reasons. If the camera is accessed by an unintended third party, there may be an undesired effect, such as operations or settings to block monitoring, etc.

The camera can be fraudulently accessed in a network environment where a device is connected or connectable to the network without the administrator's permission, or a PC or other network device connected to the network can be used without any permission. Connect to these environments at your own risk. To prevent unauthorized access to the camera, set it according to the following steps.

Do not use the browser you use to set the camera to access other websites while you set or after setting the camera. You will remain logged in to the camera as long as the browser is open, so to prevent an unintended third party's use or execution of malicious programs, close the browser after you finish setting the camera.

How to set up

1. Set the network address of the camera using SNC toolbox.
   For details about how to use SNC toolbox, refer to the application guide.
   After this step, do not use SNC toolbox to change the network settings of the camera. Use SNC toolbox to search for the camera only.

2. Start the web browser and set the SSL function to Enable in the camera settings.
   For details, refer to “Setting the Security — Security Menu” in the Administrator menu on page 59.

3. Restart the web browser and access the camera again.

4. Set the user name and password of the administrator of the camera.
   For details, refer to “Setting the Security — Security Menu” in the Administrator menu on page 59.

5. Check the Referer check checkbox.
   For details, refer to “Setting the Security — Security Menu” in the Administrator menu on page 59.

6. When you use the e-Mail (SMTP) function, set the TLS function to On. Use a mail server that supports the TLS function.
   For details, refer to “Sending an Image via E-mail — e-Mail (SMTP) Menu” in the Administrator menu on page 63.

Hereafter, use the camera using the SSL connection. When you use the FTP server or the FTP client function, use them in an environment where the network cannot be intercepted by a third party. The SSL connection cannot be used for the FTP server or the FTP client function.

Note
The model on sale in China does not support the SSL function.
## Operating the Camera

This section explains how to monitor the image from the camera using your Web browser (Internet Explorer).

The functions of the camera should be set by the Administrator. For the setting of the camera, see “Administrating the Camera” on page 25.

Each type of user can use the corresponding functions below.

<table>
<thead>
<tr>
<th>Function</th>
<th>Administrator</th>
<th>User</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monitor a live image</td>
<td>●</td>
<td>●</td>
</tr>
<tr>
<td>View the date and time</td>
<td>●</td>

</tr>
</tbody>
</table>

- **●**: Usable function
- **–**: Not usable function

The access rights of the administrator and the user can be set in “Setting the User — User Menu” of the Administrator menu on page 58.

## Administrator and User

This network camera identifies those who log in as the Administrator or User.

The **Administrator** can use all the functions of this network camera, including camera settings. The **User** can use the functions for monitoring the image from the camera, and control the camera. The **Viewer mode** setting is used to restrict the user’s access rights. There are five types of users.
Logging in to System

Logging in as a user

1. Start the Web browser on your computer and type the IP address of the camera you want to monitor.
   
   ![Address](http://192.168.0.100)

   The viewer is displayed.

   Display sample:

   ![Viewer Display](image)

   Three types of viewer are available: ActiveX viewer, Plug-in free viewer and custom homepage. By default, ActiveX viewer is displayed. To switch the viewer, make changes to the Viewer menu (page 75).

   **Note**

   If the main viewer does not start correctly, the security level of the Internet Explorer may be set to higher than Medium. See “To display the viewer correctly” on page 9 and check the security level.

About Viewers

You can use the following viewers.

**ActiveX viewer**

This viewer can monitor the camera image in any of the JPEG, MPEG4 and H.264 video codecs. You must install this viewer when you access the main viewer for the first time.

When you display the main viewer of the camera for the first time

When you access the network camera using ActiveX viewer for the first time, the Security Warning appears. Click Yes and install ActiveX Control. You can use all the functions of the viewer with ActiveX Control.

**Plug-in free viewer**

This viewer allows the user to select from three image display methods: JPEG, JPEG/Flash or ActiveX viewer.

- JPEG method: JPEG images will be displayed in sequence.
- JPEG/Flash method: JPEG images will be displayed in sequence. Adobe Flash is required to display the image.
- ActiveX viewer method: The image can be viewed when the image display is set to JPEG, MPEG4 or H.264.

**Notes**

- If Automatic configuration is enabled in the Local Area Network (LAN) Settings of Internet Explorer, the camera image may not be displayed. In that case, disable Automatic configuration and set the Proxy server manually. For the setting of the Proxy server, consult your network administrator.
- When you install ActiveX Control, you should be logged in to the computer as the Administrator.

**Tip**

Every page of this software is optimized for Internet Explorer in Medium font.
Configuration of Main Viewer

This section explains the functions of the parts and controls of the main viewer. For a detailed explanation on each part or control, see the specified pages.

Main viewer using ActiveX viewer

Main menu

**ActiveX**
Displays the ActiveX viewer.

**Plug-in free**
Displays the Plug-in free viewer.

**Tool**
You can download system utility from here. (page 21) This operation is only available when you are logged in as administrator.

**Setup**
Click to display the Administrator menu. (page 25) You can operate this function only when logging in as the administrator.

**Language**
Set language from pull-down.

Control panel section
You can drag the panels to the monitor screen and configure them.
To return to the operation panel, drag the panel and configure the operation panel.
Click the ▶️ to hide the detail setting menu or click it again to show the menu.

Information panel
Check the date and time here.

View panel
You can change the screen mode, size of the image, image codec mode and frame rate. Also, still images and movies can be saved (movie saving can also be stopped) from here.

**Screen Mode**
Select Window or Full Screen.

**View size**
Selects the view size to be displayed.
Click **View size** list box to select the view size.
Select x1/4 to display the images set in Image size of the Camera menu (page 38) in 1/4 size.
Select x1/2 to display the images set in Image size of the Camera menu (page 38) in 1/2 size.
Select x1 to display images set in Image size of the Camera menu. (page 38)
Select Full to display images according to the view size.
Select Fit to display images according to the view size, with fixed aspect ratio.

**Image Codec**
Select **Image 1** or **Image 2** for the image codec mode.

*Note*
When Codec of **Image 2** is set to Off in the Camera menu-Video codec tab, you cannot select **Image 2**.
**Frame rate**
(Displayed only when the camera image is in JPEG.)
Selects the frame rate to transmit images.

**Capture**
Click to capture a still image shot by the camera and to store it in the computer. Click  to open the folder to be saved.

**Note**
In the case of Windows Vista, Windows 7, Windows 8 or Windows 8.1, if “Enable Protected Mode” is checked in Control Panel-Internet Option-Security, still images cannot be shot.

**Run**/ **Stop Save Video**
Runs and stops Save Video. Click  to open the folder to be saved.

**Note**
In the case of Windows Vista, Windows 7, Windows 8 or Windows 8.1, if “Enable Protected Mode” is checked in Control Panel-Internet Option-Security, video content cannot be saved.

**Camera control panel**

The camera control panel appears when SolidPTZ is set to On. This panel allows you to control the camera’s pan/tilt/home position and zoom (page 18). In addition, you can obtain authority to operate the camera in exclusive control mode.

**Image action**
Select the mode of operation from Off, Area zoom and Vector dragging.

**Pan/Tilt control**
Click the arrow button the direction in which you want to move the camera. Keep it pressed to move the camera continuously.
To return to the home position, click .

**Zoom control**
Press  to zoom out, and press  to zoom in. Zooming continues while the button remains pressed.

**Exclusive control**
Click this button to display the time remaining for operation authority. However, if operation authority has not been obtained, the waiting time is displayed.

**Note**
Set the Exclusive control mode in the System Tab of the System Menu to On to perform exclusive control (page 27).

**Panorama panel**
It is displayed when SolidPTZ is set to on.
If you click on the Panorama panel, the image of that place is displayed on the monitor.

**Trigger panel**
The above is displayed only when Viewer mode (page 58) is set to Full, and one or more triggers are enabled in the Trigger menu (page 70).

The configured functions are displayed as buttons on this panel.

**Note**
When the Exclusive control mode is set to on, the configured function cannot be used without operation authority.
Click the function button you want to use on the Trigger panel. The selected function is activated. The selectable functions are as follows:

- send still image files attached to an e-mail (page 20)
- send still image files to an FTP server (page 20)
- control the alarm output (page 20)
- switch the Day/Night function on/off (page 20)

Preset position panel

The above is displayed only when one or more preset positions are stored in memory.

The registered preset position is displayed.

If you select a thumbnail when registering a preset position, it will be displayed with a thumbnail.

Select the Preset position name from the list. The camera will move to the preset position that you have stored in memory using the Preset position menu.

Others panel

(The Other panel is displayed in the case of an MPEG4 or H.264 image.)

You can switch between TCP and UDP (Unicast/Multicast).

Each click switches the transmission mode of the video data between TCP mode, Unicast mode, and Multicast mode (page 21).

Monitor image

The image shot by the camera is shown here. There are two modes for on-screen pan/tilt/zoom operation using a mouse: Area zoom mode and Vector dragging mode.

In the Area zoom mode, clicking will pan or tilt the camera towards the center of the image. The Area zoom will move the camera in the direction that displays the area selected by the operator and zooms in at the same time. The operator can choose a part of the image to view and zoom in by surrounding an area with a frame by dragging the mouse.

In the Vector dragging mode, the camera pans or tilts in the dragged direction. How long you drag the mouse determines the speed. Releasing the button on the mouse after dragging stops the panning or tilting of the camera. You can also use the camera control panel bar to pan or tilt.

The zoom operation using the mouse wheel is available in all modes.

Plug-in free viewer

Main viewer using Plug-in free viewer

Display sample:
Monitor screen
There are two modes for on-screen pan/tilt/zoom operation using a mouse: Area zoom mode and Vector dragging mode. A control bar is displayed on the screen. In the Area zoom mode, clicking will pan or tilt the camera towards the center of the image, and will move the camera in the direction that displays the area selected by the operator and zooms in at the same time. The operator can choose a part of the image to view and zoom in by surrounding the area with a frame by dragging the mouse.
In the Vector dragging mode, the camera pans or tilts in the dragged direction. How long you drag the mouse determines the speed. Releasing the button on the mouse after dragging stops the panning or tilting of the camera. You can also use the tool bar to pan or tilt.
The zoom operation using the mouse wheel is available in all modes.

Control bar
The following operation buttons are available.

Camera list
The camera list is displayed when Camera list is set to On in the viewer menu, and at least one camera is registered.

Using SolidPTZ function
You can operate the camera by using the SolidPTZ function, which provides panning, tilting and zooming by adjusting the position and zooming ratio from the maximum image size, without moving the camera.
There are three modes of camera operation: Area zoom mode, Vector dragging mode and PTZ Control bar.
You can control pan/tilt and zoom in either mode.
The available functions for the camera operation modes vary according to the viewer display. The available functions are as follows:

<table>
<thead>
<tr>
<th>Operation from control panel</th>
<th>ActiveX viewer</th>
<th>Plug-in free viewer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operation from control panel</td>
<td>○</td>
<td>×</td>
</tr>
<tr>
<td>Area zoom</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Vector dragging</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>PTZ control bar</td>
<td>×</td>
<td>○</td>
</tr>
</tbody>
</table>

Notes
• Pan/Tilt limitation
  The SolidPTZ function controls streaming by cropping or reducing a maximum size image. Thus, the more the camera zooms out, the less area to be panned or tilted, and becomes unavailable at the WIDE setting.
• Zoom
  The SolidPTZ function enables you to display an area of the cropped image from the maximum image size, when zoomed in at the TELE setting. And the whole area shot in the maximum image size will be displayed if the camera is zoomed out at the WIDE setting.
The SolidPTZ function’s zoom is performed digitally; therefore, some deterioration in image quality may be observed at the TELE setting.
Controlling via the control panel
(Operation common to Area zoom mode and Vector dragging mode)
You can operate the camera direction, zoom, and focus by using the control panel for the monitor image currently displayed.

Pan/Tilt control
Click the arrow button in the direction in which you want to move the camera. Keep it pressed to move the camera continuously. To return to the home position, click .

Zoom control
Click  to zoom out, and click  to zoom in. Zooming continues while the button remains pressed.

Panning, tilting and zooming by specifying the area (Area zoom mode only)
Click and hold the left button of the mouse on the monitor image, and drag the mouse diagonally to draw a red frame around the portion you want to enlarge. The camera moves so that framed portion is positioned at the center of the display and is zoomed in.

Note
When the specified area is zoomed in, the center may be shifted or some portion of the image may appear out of the monitor image section. In this case, click the point you want to move to the center or click the arrow button on the camera control panel.

Panning and tilting by dragging the screen (Vector dragging mode only)
When you click on the starting point on the image and drag to the end point, the camera pans/tilts in the direction of the arrow from the starting point to the end point. The speed of operation is determined by the length of arrow. Releasing the button on the mouse stops the panning/tilting of the camera.
Moving the camera to a preset position (Common operations in Area zoom and Vector dragging modes)

Select a preset position name from the Preset position panel. The camera will move to the preset position that you have stored in memory using the Preset position menu (page 60).

Using pan/tilt/zoom operations with the displayed control bar (PTZ Control bar only)

Pan/Tilt operations
Click the arrow of the direction you wish to move the camera. Continue clicking on the arrow to keep moving the direction of the camera.

Zoom operation
Click to zoom out, click to zoom in. The zoom operation continues while you are clicking on the button.

Controlling the Camera on a Full Image

When the camera is in controllable condition, the full image appears on the panorama panel. The full image is the still image of entire area to be shot by the camera in reduced-sized image. By clicking on the full image, the selected location appears on the panorama panel.

To create a full image
Create the full image with Capture full image in the Initialize tab of the System menu. See page 31 for details.

Tip
Make sure to recreate the full image when you move the camera position or change the layout around the camera.

To display a specified position on the monitor

1 Create the full image and display on the monitor.

2 Click the portion you want to see on the full image. The current specified position appears on the monitor screen.
Using the Trigger Button

You can execute various functions by clicking their respective buttons on the Trigger panel.

Sending a monitor image via e-mail

You can send a captured still image by attaching it to an e-mail.
To use this function, you need to make e-Mail (SMTP) active and set the address in the Trigger menu of the Administrator menu properly (page 70).

1 Click e-Mail (SMTP) on the Trigger panel.
The still image of the time you click is captured, and your e-mail with the image file attached is sent to the specified mail address.

Sending a monitor image to an FTP server

You can send a captured still image to the FTP server.
To use this function, you need to make FTP active and set the address in the Trigger menu of the Administrator menu properly (page 70).

1 Click FTP client on the Trigger panel.
The still image of the time you click is captured, and the image file is sent to the FTP server.

Controlling Alarm out 1

You can control Alarm out 1.
To use this function, you need to make Alarm out 1 active in the Trigger menu of the Administrator menu (page 70).

1 Click Alarm out 1 on the Trigger panel.
The alarm output is switched by clicking.
The alarm output mode can be selected from Toggle or Timer of Alarm out 1 in the Trigger menu (page 70).

Tip
For the connection of peripheral devices to the alarm output of the I/O port, see the supplied Installation Manual.

Controlling the Day/Night function

You can set the Day/Night function to On (night mode) and Off (day mode).
To use this function, you need to make Day/Night active in the Trigger menu of the Administrator menu (page 70).

1 Click Day/Night on the Trigger panel.
Each click switches the Day/Night function alternately between On (night mode) and Off (day mode).

Note
If Day/Night in the Trigger-Day/Night menu (page 70) is set to Auto, you cannot control the Day/Night function by clicking Day/Night.
Switching Transmission Mode

You can select the Transmission mode for video/audio data. This function can be used when Mode (video codec mode) is set to MPEG4 or H.264 and the ActiveX viewer is used.

**Note**
The function may not operate correctly if you use personal firewall software or antivirus software on your computer. In that case, disable the software or select the TCP mode.

1. Select **TCP**, **Unicast** or **Multicast** from the **Connection** drop-down list in the Others panel.

   **TCP**: This is normally selected. When **TCP** is selected, HTTP communication is adopted for video communications. HTTP is the protocol used for reading the usual Web page. In an environment capable of reading Web pages, you can watch video by selecting the TCP port.

   **Unicast**: When **Unicast** is selected, RTP (Real-time Transport Protocol) is adopted for video communications. Since RTP is the protocol for running video data, the video playback is smoother than when **TCP** (HTTP) is selected. If a firewall is installed between the camera and the computer, or depending on the network environment, video may not play back properly when **Unicast** is selected. In this case, select **TCP**.

   **Multicast**: This protocol is selectable when **Multicast streaming** (page 41) is On. When **Multicast** is selected, RTP (Real-time Transport Protocol) and UDP multicast techniques are adopted for video transmission. By selecting it, the network transmission load of the camera can be reduced. If a router that does not correspond to a multicast or firewall is installed between the camera and the computer, video may not play back properly. In this case, select **TCP** or **Unicast**.

**Note**
When you are connected to a Proxy server, **Unicast** or **Multicast** cannot be selected.

Using the System Utility

You can download system utility from the tools tab on the main menu.

To use the utility, click **Download** to begin download.

**SNC viewer**

SNC viewer is an application which allows you to set the initial state of the viewer.

**Installing the SNC viewer**

1. Execute the downloaded SNCViewer.msi file.
2. Install the SNC viewer following the instructions on the wizard. When the license agreement policies are displayed, agree after reading them carefully and install the SNC viewer.

**Using the SNC viewer**

Click **SNC viewer** in the control panel.
Connection tab

You can set the connection method. Select the start-up connection from: TCP, Unicast, and Multicast. If TCP connection is selected, you can configure proxy settings by selecting Use proxy.

View tab

Screen mode
You can select Window or Full Screen.

View size
You can select the view size.

JPEG framerate
You can set the frame rate for JPEG.

Image action
Select from the image operation modes Area zoom, Vector dragging and Off.

Tip
The operation mode of Solid PTZ have been changed for this device.

Audio tab

Volume
Muting: Select this option for Muting the sound at start-up. Use the slide bar to set the volume for start-up sound output.

Mic
Muting: Select this option for Muting the microphone sound at start-up. Use the slide bar to set the volume for start-up microphone input.

Note
This unit is not equipped with audio functions.
Save tab

Specify a folder to save the still images and movies to.

Note

In the case of Windows Vista, Windows 7, Windows 8 or Windows 8.1, if “Enable Protected Mode” is checked in Control Panel-Internet Option-Security, still images cannot be shot and video content cannot be saved.

Joystick tab

You can assign the joystick buttons here.

Installing the SNC desktop viewer

1. Click Download.
   When the license agreement policies are displayed on the SNC desktop viewer download screen, agree after reading them carefully and download the SNC desktop viewer.

2. Click Save.
   Save SncDesktopViewer.gadget in the specified location.

3. Click Open files.
   Run it in the “Download completed” dialog.

4. Click Run.
   The message “Do you want to run this software?” will be displayed. Agree and run.

5. Click Install.
   The message “Do you want to install this Gadget?” will be displayed. Agree and run.

Using the SNC desktop viewer

When installation is finished, SNC desktop viewer is displayed on the side bar of Windows Vista or Desktop in the case of Windows 7.

SNC Desktop viewer

The gadget that displays the camera image on the side bar of Windows Vista or Desktop in the case of Windows 7.

Camera address

Set the IP address for the camera to display on the Gadget.
Frame rate
Select the frame rate for the image to display on the Gadget.

Image size
Select the image size for the image to display on the Gadget.

How to control PTZ
Select the PTZ operation mode for the Gadget screen from the options Area zoom, PTZ control bar, and Vector dragging.

Click \(\times\) (Exit) to exit Gadget.
When you click \(\bigcirc\) (Set), you will see the following setting screen.

Tip
The operation mode of Solid PTZ has been changed for this device.
Administrating the Camera

This section explains how to set the functions of the camera by the Administrator.
For details about monitoring the camera image, see “Operating the Camera” on page 12.

This section explains the basic operations and each option of the Administrator menu.

Note on the display of menu options
The setting menus of this unit will clearly display only the setting options that you can currently select. Grayed out options cannot be selected. Only supported functions are displayed.

Basic Operations of the Administrator Menu

You can use the Administrator menu to set all functions to suit the user’s needs.

How to set up the Administrator menu

1. Log in to the homepage to display the viewer. For details, see “Logging in as a user” on page 13.

2. Click Setting on the main menu. The authentication dialog appears. Enter the user name and password for Administrator. The user name “admin” and password “admin” are set at the factory for the Administrator.

3. Click the menu name (example: System) on the left side of the Administrator menu. The clicked menu appears.

Example: “System” menu

4. Select the required tab above the menu, and set each setting option in the tab.

Example: “Date & time” tab of “System” menu

See pages 27 to 77 for details of the menu tabs and setting options.

5. After setting, click OK. The settings you have made become active.

Click Cancel to nullify the set values and return to the previous settings.

Buttons common to every menu
The following buttons are displayed on all the menus. The functions of the buttons are the same on every menu.

![OK and Cancel buttons]

Click this button to confirm the settings.

Click this button to nullify the set values and return to the previous settings.

General notes on menus

- One-byte katakana character is not valid for any text field, such as User name.
- After changing a setting on a menu, wait at least 30 seconds before turning off the power of the camera. If the power is turned off immediately, the new setting may not be stored correctly.
- If the camera settings are changed while watching the main viewer, some settings cannot be restored. To reflect the change on the opening main viewer, click Refresh on the Web browser.
Configuration of the Administrator menu

System
Displays the System menu. (“Configuring the System — System Menu” on page 27).

Camera
Displays the Camera menu for setting the camera image. (“Setting the Camera Image — Camera Menu” on page 32).

Network
Displays the Network menu for setting the network connection. (“Configuring the Network — Network Menu” on page 42).

SSL
Displays the SSL menu for performing SSL communication between the client device and camera. (“Setting the SSL function — SSL Menu” on page 47)

802.1X
Displays the 802.1X menu for connecting the camera to a network configured in compliance with the 802.1X standard for port authentication. (“Using the 802.1X Authentication Function — 802.1X Menu” on page 52)

User
Displays the User menu for setting the log in user name and password. (“Setting the User — User Menu” on page 58)

Security
Displays the Security menu for specifying a computer that is allowed to connect to the camera. (“Setting the Security — Security Menu” on page 59)

Preset position
Displays the Preset position menu to register a position you want to save. “Tour function,” which rotates the registered positions, is also set here. (“Saving the Camera Position and Action — Preset position Menu” on page 60)

e-Mail (SMTP)
Displays the e-Mail (SMTP) menu for sending an e-mail. (“Sending an Image via E-mail — e-Mail (SMTP) Menu” on page 63)

FTP client
Displays the FTP client menu for sending an image file, etc., to an FTP server. (“Sending Images to FTP Server — FTP client Menu” on page 66)

Trigger
Displays the Trigger menu for designating the operation to execute when you run a trigger. (“Setting the Operations from the Viewer — Trigger Menu” on page 70)

Schedule
Displays the Schedule menu for the Day/Night function, e-Mail (SMTP) function, FTP client function, and Alarm output function, etc. (“Setting the Schedule — Schedule Menu” on page 71)

Event detection
Displays the setting menu for all built-in detection functions. (“Setting the Sensor input/Camera tampering detection/Motion detection — Event detection Menu” on page 72)

Viewer
Displays the Viewer menu from which you can select the viewer to use and configure advanced settings. (“Configuring the Viewer — Viewer Menu” on page 75)
Configuring the System — System Menu

When you click System in the Administrator menu, the System menu appears. Use this menu to perform the principal settings of the software. The System menu has seven tabs: System, Date & time, Superimpose, Installation, Initialize, System log and Access log.

System Tab

Title bar name
Type a name of up to 48 characters to be displayed on the title bar. The characters typed here are displayed on the title bar of the Web browser.

Serial number
The serial number of the camera is displayed.

Software version
The software version of this camera is displayed.

Exclusive control mode
Controls the authority to operate pan, tilt, zoom and some other functions of the camera.

On: Only one user has control authority. Set the operation time for one user in Operation time. If a user tries to operate a function during operation by another user, the authority is controlled by the settings of Operation time and Maximum wait number.

Off: Multiple users can control pan, tilt and zoom at the same time. When multiple users control these functions at the same time, the last operation has priority.

Operation time
Sets the time length for a user who has control authority. The selectable range is from 10 to 600 seconds. This is effective when Exclusive control mode is set to On.

Maximum wait number
Sets the number of users who are permitted to wait for their turn for control authority during operation by one user. The selectable number is from 0 to 5. This is effective when Exclusive control mode is set to On.

Notes

- To use Exclusive control mode, the date and time of this unit and the connected computer must be set correctly first.
- To use Exclusive control mode, do not disable the Web browser Cookie. If it is disabled, this mode cannot be used.
- When you change the Exclusive control mode setting, click Refresh on the Web browser to reflect the change when opening the main viewer page.

PTZ mode
Select the pan/tilt control mode using the 8-direction arrow buttons (page 15) and the zoom control mode using the W/T buttons (page 15). Select Normal or Step.

Normal: When you click the mouse button, the camera starts panning, tilting or zooming, and the operation continues while you hold down the mouse button. To stop the operation, release the mouse button.

Step: Each time you click the mouse button, the camera moves (pans, tilts or zooms). If you keep the mouse button held down for more than 1 second, the operation mode is temporarily changed to Normal. When you release the mouse button, camera operation stops and the Step mode is restored.

When you select Step, Pan/Tilt level and Zoom level are selectable.

Pan/Tilt level: Select the camera transition level from 1 to 10 by clicking the 8-direction arrow buttons for panning/tilting. Selecting 10 provides the maximum transition level.

Zoom level: Select the camera transition level from 1 to 10 by clicking W/T for zooming. Selecting 10 provides the maximum transition level.

OK/Cancel
See “Buttons common to every menu” on page 25.
**Date & time Tab**

**Current date & time**
Displays the date and time set on this unit.

**Note**
After you have purchased the camera, be sure to check the date and time of the camera and set as necessary.

**PC clock**
Displays the date and time set on your computer.

**Date & time format**
Select the format of date and time to be displayed in the main viewer from the drop-down list. You can select the format between `yyyy-mm-dd hh:mm:ss` (year-month-day hour:minutes:seconds), `mm-dd-yyyy hh:mm:ss` (month-day-year hour:minutes:seconds), and `dd-mm-yyyy hh:mm:ss` (day-month-year hour:minutes:seconds).

**Adjust**
Select how to set the day and time.

**Keep current setting:** Select if you do not need to set the date and time.
**Synchronize with PC:** Select if you want to synchronize the camera’s date and time with the computer.
**Manual setting:** Select if you want to set the camera’s date and time manually.
Select the year, month, date, hour, minutes and seconds from each drop-down list.
**Synchronize with NTP:** Select if you want to synchronize the camera’s date and time with those of the time server called NTP server (Network Time Protocol).
Set the NTP server when **Synchronize with NTP** is selected.

**Use the following NTP server address:** Synchronize with the selected NTP server address.
**NTP server 1:** Enter the first choice for NTP server address.
**NTP server 2:** Enter the second choice for NTP server address.
**NTP server 3:** Enter the third choice for NTP server address.

**DHCP server:** Select DHCP server when you need to get NTP server information from DHCP server.

**Multicast:** Select Multicast when you search for an NTP server with Multicast.

**Time zone**
Set the time difference from Greenwich Mean Time in the area where the camera is installed.
Select the time zone in the area where the camera is installed from the drop-down list.
For Japan, select “Osaka, Sapporo, Tokyo (GMT+9:00)”

**Automatically adjust clock for daylight saving time changes**
When selected, the clock is automatically adjusted according to the daylight saving time of the selected time zone.

**Note**
If the time zone selected in **Time zone** is different from that set on the computer, the time is adjusted using the time zone difference and set on the camera.

**OK/Cancel**
See “Buttons common to every menu” on page 25.

---

**Superimpose Tab**
Select whether to superimpose the camera ID, date/time and other information on an image or not. A still image can be also superimposed.
You can select whether to superimpose on Image 1 and Image 2 or not, set the font size and configure each displayed item.

**Note**
The superimpose setting for Image 1 is applied to Image 2 in the following conditions.
Codec information is not displayed.
- **Image 1 and Image 2 are the same size and larger than 640 × 480.**
- **When Cropping is set to On in the Camera menu,** either vertical or lateral size of the cropped image is larger than that of 640 × 480.
Date & time
Set the format of date/time and the separator. These settings are applied to both Image 1 and Image 2.

Camera ID
Select the type of information displayed as Camera ID. Set the Text string to be displayed.

- **Logo**: Select an image file you want to use for Logo by using the **Browse** button, and click **Upload** to upload the file.
  - **Supported image file format**: gif89a format (GIF animation and transparent GIF format are not supported.)
  - **Maximum image size**: 640 × 120
  - **Number of horizontal pixels**: An even number
  - **Maximum file size**: Approximately 50 KB

Notes
- Both **Text** and **Logo** cannot be used at the same time.
- Camera ID is applied to both Image 1 and Image 2.
- If the image size of the logo is larger than the image, it cannot be displayed.

Image
Select whether to superimpose on Image 1 and Image 2 or not, set the font size and configure each item that display position is assigned.

Superimpose
- **On/Off**: When using the Superimpose function, select **On**.
- **Font size**: Set the font size.

Superimpose format
Set the items to superimpose according to the displayed position. English one byte characters and symbols are displayed. Available items are as follows:
- **Off**: Set not to superimpose.
- **Text**: Set to display a string that you want. You can enter characters in the right free space.

- **Date & time**: Set to display date and time.
- **Camera ID**: Set to display Camera ID.
- **Codec**: Set to display the bit rate and frame rate.
- **Zoom ratio**: Set to display the zoom ratio.
- **Camera direction**: Set to display the name of a preset position.
- **Event**: Set to display an event record.

Notes
- The items except for Off and Text cannot be set at the same time.
- Depending on the length of the string you enter in Text, the string display may crossover the other item. In this case, change the display position or modify the string.
- When Image 2 is turned on and **Video Output** is set to **On**, the content set to be output from **Video Output** is displayed. (SNC-ZB550/ZM550/ZM551)

OK/Cancel
See “Buttons common to every menu” on page 25.

Installation Tab
You can perform settings related to installation.

Display sample: SNC-CH220

Maximum image size
SNC-EB520/EM520/EM521
The maximum image size is 800 × 600. This maximum setting cannot be changed.

SNC-CH115/CH120/CH160/DH120/DH120T/ZB550/ZM550/ZM551
- **1280 × 720**: Image will have an aspect ratio of 16:9, and an image size up to 1280 × 720 can be specified for the video codec.
- **1280 × 1024**: Image will have an aspect ratio of 5:4, and an image size up to 1280 × 1024 can be specified for the video codec.

SNC-CH220/CH260/DH220/DH220T/DH260
- **1920 × 1080**: Image will have an aspect ratio of 16:9, and an image size up to 1920 × 1080 can be specified for the video codec.
**1920 × 1440:** Image will have an aspect ratio of 4:3, and an image size up to 1920 × 1440 can be specified for the video codec.

**Notes**
- The camera restarts when the Maximum image size is changed. It takes about 2 minutes.
- The settings below are changed when the Maximum image size is changed.
  - Camera menu-Privacy Masking tab: returns to the factory setting.
  - Camera menu-video codec tab: returns to the factory setting except:
    - SNC-CH115/CH120/CH160/DH120/DH120T/ZB550/ZM550/ZM551
      - Image size of image1: to be 1280 × 720 when set to 1280 × 720, or 1280 × 1024 when set to 1280 × 1024.
      - Frame rate of image1: to be 30 fps or 25 fps* when set to 1280 × 720, or 20 fps when set to 1280 × 1024.
    - SNC-CH220/CH260/CH220T/DH220/DH260
      - Image size of image1: 1920 × 1080 (when set to 1920 × 1080), or 1920 × 1440 (when set to 1920 × 1440).
      - Frame rate of image1: 30 fps or 25 fps* (when set to 1920 × 1080), or 20 fps (when set to 1920 × 1440).
  - Depending on the camera operating mode setting.
  - Preset position menu: returns to the factory setting.
  - Alarm buffer menu: returns to the factory setting.
  - Event detection menu- motion detection tab: returns to the factory setting except:
    - SNC-CH115/CH120/CH160/DH120/DH120T/ZB550/ZM550/ZM551
      - Maximum detection size of motion detection: to be width of 1280 and height of 720 when set to 1280 × 720, or 1280 and height of 1024 when set to 1280 × 1024.
    - SNC-CH220/CH260/CH220T/DH220/DH260
      - Maximum detection size of motion detection: width 1920, height 1080 (when set to 1920 × 1080), or 1920 and 1440 (when set to 1920 × 1440).
  - Motion detection function is not available when Monitor out is set to On.
  - The output signal format is determined according to the setting of the camera’s NTSC/PAL switch.

You can configure the output setting for the monitor output terminal of this unit. Select On to output an NTSC or PAL signal.

**Notes**
- Monitor out is used when you install this unit to adjust the angle of view, etc. Be sure to set Off and unplug the AV cable when you do not use this function.
- Be aware that the system performance may be influenced, if monitor out is set to on.
- The output signal format is determined according to the setting of the camera’s NTSC/PAL switch.

**Video out (SNC-ZB550/ZM550/ZM551)**

When the network connection change switch is set to LAN, you can configure the output setting for the monitor output terminal of this unit. Select On to output an NTSC or PAL signal.

**Notes**
- The video signal format is determined by the setting of the camera’s “NTSC/PAL Change Switch” setting.
- When Video Output is set to On, the motion detection function is not available.

**OK/Cancel**

See “Buttons common to every menu” on page 25.
Initialize Tab

Display sample: SNC-CH120

Reboot
Used when rebooting the camera. Click Reboot, and the message “This System will be rebooted. Are you sure?” appears. Click OK to reboot the camera. It takes about two minutes to restart.

Factory default
Resets the camera to the factory settings.

Retain current network settings
When this item is checked, only the current network settings will be retained after reset. Click Factory default, and the message “Setup data will be initialized. Are you sure?” appears. When you click OK, the network indicator on the camera starts to blink. After adjustments of the default settings have finished, the camera reboots automatically. Do not turn off the camera until the camera reboots.

Tip
The camera can also be reset to the factory settings by turning on the power of the camera while pressing the reset button on the camera. For details, see the supplied Installation Manual.

Backup setting data
Saves the setting data of the camera in a file. Click Save, and follow the instructions on the Web browser to specify the folder and save the setting data of the camera. The file name preset at the factory is “snc-ch120.cfg” for SNC-CH120.

Restore setting
Loads the stored setting data of the camera.

Click Browse and select the file in which the setting data is stored. Click OK, and the camera is adjusted according to the loaded data, and restarted.

Restore preset position and Privacy Masking settings
If you select this, the stored setting data of the camera, the preset position data and the data of the Privacy Masking setting are loaded.

Notes
- When Restore preset position and the Privacy Masking setting is selected, it may take some time to load the setting data.
- The following items cannot be stored or restored with Backup setting data or Restore setting.
  - a homepage created using Custom Homepage of SNC toolbox
  - a client certificate and CA certificate to be used in the 802.1X authentication function
  - Header logo
  - superimpose logo
  - a certificate to be used in the SSL function

Delete custom homepage
Click Delete to delete the homepages recorded in the flash memory of the camera with Custom Homepage of SNC toolbox.

Capture full image
When you click Capture, a full image covering the entire shooting range is shot and saved to the camera. The full image is captured regardless of the image size and crop settings.

Note
Main viewer image may be interrupted or image and/or audio files may not be created correctly during image capturing.

Delete image
By pressing Delete, you can delete the full image recorded in the camera.

Delete thumbnails
Click Delete to delete the thumbnails set in the Preset Setting menu.

Delete header logo
Click Delete to delete the header logo set in the Viewer menu.
Delete superimpose logo
Click Delete to delete the superimposed logo, set in the camera ID on the Superimpose tab of the System menu, from the camera. To set whether to show or hide the superimposed logo, you need to configure the setting under the Superimpose tab.

System log Tab
The data of the software activity of the camera is recorded in this log. It includes data that is useful if a problem occurs. Click Reload to reload the latest data.

Access log Tab
The access record of the camera is displayed. Click Reload to reload the latest data.

Setting the Camera Image
— Camera Menu
When you click Camera in the Administrator menu, the Camera menu appears. Use this menu to set the functions of the camera. The Camera menu consists of the following tabs:
SNC-CH115/CH120/CH220/EB520/ZB550:
Common, Focus, Picture, Privacy Masking, Day/Night, Video codec, and Streaming.

Common Tab

Color
Select Color or Monochrome for the image.

OK/Cancel
See “Buttons common to every menu” on page 25.

Focus tab — Adjusting the Focus (SNC-CH115/CH120/CH220/EB520/ZB550)
Adjust the focus by moving the flange back position of the imaging device.
**Preview screen**

Preview the image and adjust the focus.
The current image focus position is superimposed when adjusting the focus.
For the details on each button, refer to the Control bar of the Plug-in free viewer (page 17).

**Note**

If you click the buttons in this tab, in order to adjust the focus easily, the settings below are temporarily changed:
– Privacy Masking and Cropping are deactivated.
– The current image focus position is superimposed.
– The alarm of Motion detection is deactivated.

**Adjusting the focus**

Click Start button in Easy Focus to set the focus to the optimum position.

**Notes**

• The most suitable focus position may not be available depending on imaging conditions.
  If so, click the –20, –5, –1, +1, +5 or +20 buttons to adjust the focus accordingly.
• When SolidPTZ is set to On, Easy Focus may not work properly. In this case, set SolidPTZ to Off.

**Focus reset**

Click the Reset button to return to the default flange back position.

**Focus/Zoom tab — Adjusting the focus/zoom (SNC-CH160/CH260/CH120/CH120T/CH160/CH220/CH220T/CH260/EM520/EM521/ZM550/ZM551)**

Adjust the focus and zoom position by looking at the image.

**Note**

If you click the buttons in this tab, in order to adjust the focus/zoom easily, the settings below are temporarily changed:
– Privacy Masking and Cropping are deactivated.
– The current image focus/zoom position is superimposed.
– The alarm of Motion detection is deactivated.

**Adjusting the zoom**

Click the –500, –100, –10, +10, +100 or +500 buttons to adjust the zoom position accordingly.

**Note**

The focus is moved slightly after adjusting; adjust the focus again, as necessary.

**Adjusting the focus**

Click Start button in Easy Focus to set the focus to the optimum position.

**Notes**

• The most suitable focus may not be available depending on imaging conditions. If so, click the –20, –5, –1, +1, +5, +20 buttons to adjust the focus.
• When SolidPTZ is set to On, Easy Focus may not work properly. In this case, set SolidPTZ to Off.
Picture Tab
You can set the color conditions, exposure, etc., of the camera.

Preview screen
Preview the image and adjust the picture setting. For details on each button, refer to the Control bar of the Plug-in free viewer (page 17).

Exposure
Adjust the settings of exposure.

Backlight compensation
Select On to enable the backlight compensation function.

Note
When the backlight compensation function is set to On, hunting may occur. In this case, select Off.

Exposure compensation
Select the exposure correction value from the list box to adjust the target brightness for the automatic exposure setting.
A larger value brightens the image, and a smaller value darkens the image. Selectable values are as follows:

+2.0, +1.6, +1.3, +1.0, +0.6, +0.3, 0, –0.3, –0.6, –1.0, –1.3, –1.6, –2.0 (EV)

AGC
Select the maximum gain value of the automatic exposure setting as follows.

42, 36, 30, 24, 18, 12, 6, Off (db)

If you select Off, the automatic exposure setting by gain control is not performed.

Shutter speed
• Auto-controlled shutter speed automatically sets the exposure.
• Select the minimum and maximum shutter speeds from the list box. Selectable shutter speed values are as follows:

1, 1/2, 1/4, 1/8, 1/15, 1/30, 1/60, 1/100, 1/250, 1/500, 1/1000, 1/2000, 1/4000, 1/10000 (sec.)

• If you set the same values at the minimum and maximum shutter speeds, the shutter speed will not be changed.

White balance
Select the White Balance mode.
ATW: Eliminating the influences caused by environmental illumination or lights, adjust the white balance automatically to reproduce original colors of the objects (approximately 2000 K to 10000 K).
ATW-PRO: Automatically adjusts the color to be closest to the image you are viewing (approximately 3000 K to 5800 K).
Fluorescent lamp: Sets the white balance to that suitable for photography under three-band fluorescent lighting with a neutral white color.
Mercury lamp: Sets the white balance to that suitable for photography under a mercury lamp.
Sodium vapour lamp: Sets the white balance to that suitable for photography under a high-pressure sodium vapor lamp.
Metal halide lamp: Sets the white balance to that suitable for photography under a metal halide lamp.
White LED: Sets the white balance to that suitable for photography under the light of white LEDs.
One push WB: The One push trigger button becomes active. Click the button to adjust the white balance instantly.
Manual: When this option is selected, R gain and B gain become active. Selectable gain values are from 0 to 4095.

NR
Image noise can be reduced by using the NR function. Select Off to disable the function.
Gamma setting
Set the gamma curve in the camera. Depending on subject or recording conditions, the following settings will be available:

Normal: This setting is suitable for many scenes.
Scene 1: This setting is suitable for shooting dark areas without losing detail of bright areas when the subject is in high contrast, such as both sunlight and shadow.
Scene 2: This setting is suitable for obtaining an effect stronger than Scene 1.
Scene 3: This setting is suitable for shooting dark areas brightly when the subject is in high contrast, such as both sunlight and shadow.
Scene 4: This setting does not perform gamma correction. It is suitable for picture processing of an image you shot.
Scene 5: This setting is suitable for preventing bright subjects from overexposure.
Scene 6: This setting is suitable for using a display system with a gamma characteristic of 1.8.

Brightness
Select the brightness in 11 steps, from –5 to +5. Selecting +5 provides the brightest picture.

Saturation
Select the saturation in 7 steps, from –3 to +3. Selecting +3 provides the highest image saturation.

Sharpness
Select the sharpness in 7 steps, from –3 to +3. Selecting +3 provides the sharpest picture.

Contrast
Select the contrast in 7 steps, from –3 to +3. Selecting +3 provides the highest contrast.

OK/Cancel
See “Buttons common to every menu” on page 25.

Privacy masking tab
Using the privacy masking enables you to hide images by masking specified parts of the images when streaming.

Preview screen
This screen is for monitoring images and configuring privacy masking. For details on each button, refer to the Control bar of the Plug-in free viewer (page 17).

Position
Allows you to delete privacy masks one-by-one or all at one time. After completing the configuration, register by clicking OK.

Clear: Click the button to delete the privacy mask set.
All clear: Click the button to delete all privacy mask.

Color
Specify the color of privacy masks. This setting is common to every privacy mask. The colors used are as follows:
Black, Gray1, Gray2, Gray3, Gray4, Gray5, Gray6, White, Red, Green, Blue, Cyan, Yellow, Magenta

Setting a privacy mask
Operate according to the following procedure to set a privacy mask in the position of your choice:

1. Face the camera to the position where you want to set a privacy mask using the control button on the preview screen.
2. Specify the privacy mask area by dragging the mouse on the preview screen.
3. Select the number to register from the Position drop-down list.
4. Select the color of the mask from the Color drop-down list.

**Note**

The color is common to every privacy mask. The color selected last is applied.

5. Click OK.

The mask is displayed on the preview screen.

**OK/Cancel**

See “Buttons common to every menu” on page 25.

**Day/Night Tab**

Use this tab to set the day/night function of the camera.

**Display sample: SNC-CH160**

**Preview screen**

This screen is for monitoring images and configuring day/night settings.

For details on each button, refer to the Control bar of the Plug-in free viewer (page 17).

**Day/Night mode**

Select the day/night mode from among four modes.

**Auto:** Normally works in day mode; switches automatically to night mode in a dark place.

**Threshold:** Set the brightness to High or Low when night mode is set.

**Hold time:** Set the reaction time of changes in brightness from 2 sec. to 30 sec.

**Manual:** Switch the day/night mode manually. When you select Manual, On and Off become active. When you select On, the camera works in night mode. When you select Off, it works in day mode.

**Timer:** Normally the camera works in day mode. It switches to night mode at the time you set in the Schedule menu.

Click Schedule to display the setting menu for the effective period. (“Setting the Schedule — Schedule Menu” on page 71)

**Sensor input:** Controls the day/night mode by synchronizing it with the sensor input. While a sensor input is detected, the camera works in night mode.

The status field shows the state of the Sensor input.

**Notes**

- When Day/Night mode is set to Auto, Night mode is set automatically only when AGC is set to 24db or more.
- If bright light is directed at the camera while it is in night mode it may cause hunting in the camera. In such cases, switch settings according to the lighting using the Sensor mode, or switch the Day/Night mode using the Manual mode.

**Easy Focus**

When Sync with Day/Night is selected, Easy Focus will be activated once Day/Night mode switched, and the focus readjusted automatically.

For details on Easy Focus, refer to the “Focus tab — Adjusting the Focus (SNC-CH115/CH120/CH220/EB520/ZB550)” (page 32) and “Focus/Zoom tab — Adjusting the focus/zoom (SNC-CH160/CH260/DH120/DH120T/DH160/DH220/DH220T/DH260/EM520/EM521/ZM550/ZM551)” (page 33).

**Notes**

- When using Easy Focus, satisfactory focus may not be achieved.
- When using Easy Focus, the alarm of motion detection is deactivated.
- When using Day/Night link, confirm the focus condition under both Day and Night mode.
IR illuminator (SNC-CH160/CH260/DH160/DH260)

Sync with Day/Night: IR illuminator will be activated once Day/Night mode switched, when it is checked.
Off: IR illuminator will be always off.
Maximum Strength: From low to high, Maximum strength for IR illuminator is graded from level1 to level6.

Washed-out image control (SNC-CH160/CH260/DH160/DH260)
Setting to prevent image wash-out by the IR illuminator when using night mode.
This feature is activated only when IR illuminator Sync with Day/Night link is selected.
Select On to always prevent subjects becoming washed-out.

OK/Cancel
See “Buttons common to every menu” on page 25.

Video codec Tab
Use this tab to set the items for the video codec.
Display sample: SNC-CH120

Notes
- This function is not available if SolidPTZ or Cropping is set to On.
- The motion detection function is not available if Letterbox is set to On.
- SNC-EB520/EM520/EM521 do not support this function.

You can crop a portion of the image and display the cropped image on the computer. Cropping reduces the transmitting data size and thus the network load, and a higher frame rate is achieved.
Select On to crop the image, or Off.

Notes
- This function is not available if Letterbox or SolidPTZ is set to On.
- If this function is enabled, the motion detection function will not be available.
- Video 2 image is cropped with the same setting as Video 1.
- SNC-EB520/EM520/EM521 do not support this function.
- When cropping Monitor out or Video out images, the aspect ratio of the output images and the actual cropped images will differ.

To crop an image
1 Set Cropping to On and click the Area setting button.
The area setting window appears.
2 Setting the trimming portion
Hold down the left button of the mouse on the still image and drag the cursor diagonally. The area in a red frame is the trimming portion.
3 Click OK at the bottom of the window.
The cropped image is displayed on the main viewer.
4 To close the image, click  in the upper-right corner.

Image 1 and Image 2

Note
When Video Out in the Installation tab is set to On, Image 2 cannot be used (SNC-ZB550/ZM550/ZM551).

SolidPTZ
Select On to enable the SolidPTZ function.

Letterbox (SNC-CH115/CH120/CH160/DH120/DH120T/DH160/ZB550/ZM550/ZM551)
If you use Letterbox, select On.
Notes

- This function is not available if Letterbox or Cropping are set to On (SNC-CH115/CH120/CH160/CH220/CH260/DH120/DH120T/DH160/DH220/DH220T/DH260).
- This function is not available if Letterbox, Cropping, or the Installation tab’s Video Out are set to On (SNC-ZB550/ZM550/ZM551).
- This function is not available when the maximum image size is 1920 × 1080 in the Installation tab of the System menu (SNC-CH220/CH260/DH220/DH220T/DH260).
- If this function is enabled, the motion detection function will not be available.
- When SolidPTZ of Image 1 is set to On, SolidPTZ of Image 2 can be set to On.
- When SolidPTZ is set to On, Easy Focus may not work properly. In this case, set SolidPTZ to Off.

SolidPTZ priority (SNC-CH220/CH260/DH220/DH220T/DH260)
When SolidPTZ is set to On, select Resolution or Frame rate. This setting is applied to both Image 1 and Image 2.
When you use the SolidPTZ function, select Resolution to zoom the image clearly, or select Frame rate to shoot high-speed subjects.

Codec
Select JPEG, MPEG4, H.264 or OFF. Note that Image 1 cannot be set to Off.

Notes

- The selectable size of images and frame rate for Image 2 may be limited depend on the setting of codec type, size of images and/or frame rate for Image 1.
- Motion detection function is not available when Image 2 is set to other than Off.

Image size
You can select the size of images sent from the camera. The selectable size of images are depend on the setting of maximum image size. For details on selecting maximum image size, refer to “Installation tab” in “System menu” in page 29.
When you set the different image size to Image 1 and Image 2, the available combinations are as follows:
O: Possible set x: Impossible set Δ: Possible set if the resolution is the same as Image 1

SNC-EB520/EM520/EM521

*SolidPTZ* is not available for maximum image size 1920 × 1080.
Frame rate
Set the frame rate of the image.
Selectable frame rates are as follows:
1, 2, 3, 4, 5, 6, 8, 10, 12, 15, 16, 20, 25, 30 (fps)

"fps" is a unit indicating the number of frames transmitted per second.
Configurable frame rates are as follows:
The frame rate of JPEG image can be changed by the setting of Image quality.

### Bit rate
Set the bit rate of MPEG4 or H.264 image transmission for a line. When the bit rate is set to a high level, better image quality can be enjoyed.
Selectable bit rates are as follows:
64, 128, 256, 384, 512, 768, 1024, 2048, 3072, 4096, 6144, 7168, 8192 (kbps)

**Note**
When Video Output in the Installation tab is set to On, Image 2 cannot be used (SNC-ZB550/ZM550/ZM551).

**I-picture interval**
Set the I-picture insertion interval.

**Adaptive rate control**
This function adjusts the frame rate and the bit rate automatically so that the camera plays back a smooth image to suit the connected computer environment. If On is selected, the MPEG4 or H.264 image rate is automatically adjusted.

**Notes**
- The actual frame rate and bit rate may be different depending on the image size, shooting scene, or network condition.
- When Adaptive rate control is set to On, the actual frame rate and bit rate change within the range that does not exceed the values set in Frame rate and Bit rate.

**Image quality**
Set the JPEG image quality.
Selectable values are from Level 1 to Level 10. When Level 10 is selected, the best image quality is achieved.

**Bandwidth control**
Limits the network bandwidth for the JPEG image data output from the camera.

**OK/Cancel**
See “Buttons common to every menu” on page 25.

---

**Video port number 1, 2**
Specify the transmission port number of the MPEG4/H.264 video data. It is initially set to 50000. Specify an even number from 1024 to 65534. Two port numbers (the number specified here and an odd number with 1 added to the specified number) are actually used for video data communication and control. The setting for Image 1 and Image 2 apply for Video port number 1 and 2 respectively.

**Note**
Specify different numbers for the video port number.

**Multicast streaming**
Set whether the camera uses multicast streaming for MPEG4/H.264 video data or not. It reduces the transmission load on the camera by having a computer of the same segment network receive the same transmitting data. Select On to allow, or Off not to allow multicast sending. When you select On, set Multicast address and Video port number 1 and 2 properly.

**Multicast address**
Type the multicast address used on the multicast streaming.

**Video port number 1, 2**
Specify the MPEG4/H.264 video transmission port number used for the multicast streaming. It is initially set to 60000. Specify an even number from 1024 to 65534. Two port numbers (the number specified here and an odd number with 1 added to the specified number) are used for video data communication and control. The setting for Image 1 and Image 2 apply for Video port number 1 and 2 respectively.

**Note**
Specify different numbers for the video port number.

**OK/Cancel**
See “Buttons common to every menu” on page 25.
Configuring the Network — Network Menu

When you click **Network** in the Administrator menu, the Network menu appears. Use this menu to configure the network to connect the camera and the computer. The Network menu consists of three tabs: **Network**, **QoS** and **Dynamic IP address notification**.

Network Tab

This section provides the menus for connecting the camera through the network cable.

**MAC address**
Displays the MAC address of this unit.

**Ethernet status**
Displays the current transmission rate. This is displayed when the network change selection switch is set to LAN. This is not displayed when it is set to SLOC. (SNC-ZB550/ZM550/ZM551)

**Auto-MDI/MDIX**
According to the port of the connected Ethernet device, automatically switches the port of the unit between MDI and MDI-X for transmission. Displays the Ethernet port mode of the unit. This is displayed when the network change selection switch is set to LAN. This is not displayed when it is set to SLOC. (SNC-ZB550/ZM550/ZM551)

Network type (SNC-ZB550/ZM550/ZM551)
Displays the network type. SLOC is displayed when the network change selection switch is set to SLOC, and LAN is displayed when the network change selection switch is set to LAN.

**IPv4 setting**
Configure the IPv4 network setting.

**IP address**
Configure the IP address.

*Obtain an IP address automatically (DHCP):* Select this option when a DHCP server is installed on the network to allow IP address assignment. With this setting, the IP address is assigned automatically.

**IP address**
Type the IP address of the camera.

**Subnet mask**
Type the subnet mask.

**Default gateway**
Type the default gateway.

**DNS server**
Configure the DNS server address. *Obtain DNS server address automatically:* Select this option to obtain the IP address of DNS server automatically. It can be set only when **Obtain an IP address automatically (DHCP)** is selected in the Network tab.

**Note**
When you select *Obtain DNS server address automatically*, make sure that a DHCP server is operating on the network.

**Use the following DNS server address:** Select this option when you set a fixed address as the IP address of the DNS server. With this setting, specify the addresses on **Primary DNS server** and **Secondary DNS server** manually.
Primary DNS server
Type the IP address of the primary DNS server.

Secondary DNS server
Type the IP address of the secondary DNS server, if necessary.

MTU
Enter the MTU value for the Ethernet port. (1000 - 1500)
If IPv6 is enabled, the value must be 1280 or greater.

Host name
Type the host name of this unit to be transmitted to the DHCP server. This setting is valid only when Obtain an IP address automatically (DHCP) is selected in the Network tab.

Domain suffix
Type the domain suffix of this unit to be transmitted to the DHCP server. This setting is valid only when Obtain an IP address automatically (DHCP) is selected in the Network tab.

Note
The domain suffix is sent to the DHCP server as FQDN (Fully Qualified Domain Name) information when Host name is set.

HTTP port number
Normally select 80. If you want to use a port number other than 80, select the text box and type a port number between 1024 and 65535.

Note
When you have set the HTTP port number to a number other than 80 in the Network menu or in SNC toolbox, access the camera again by typing the IP address of the camera on your Web browser as follows:

Example: Setting port number 8000 when IP address is 192.168.0.100

IPv6 setting
Configure the IPv6 network settings.
IPv6 can be used simultaneously with IPv4.
Only IPv6-specific details are explained here. For common details, see “IPv4 setting” on page 42.

On/Off
To use IPv6, select On.

Prefix
Enter the Prefix value. (0 to 128)

IPv6 MTU
Enter the MTU value for IPv6. (1280 -1500)
The value must not exceed the MTU value for the Ethernet port.

OK/Cancel
See “Buttons common to every menu” on page 25.

QoS Tab
In this tab, you can mark the data traffic packets sent from the device and configure the settings for QoS control. Rules for the types of data traffic can be created using IPv4/IPv6 address, port number, protocol, etc. A maximum of 10 rules can be registered for IPv4 and IPv6, respectively.

IPv4 QoS
Select On to configure the QoS setting for IPv4.

Rule
Used to register, edit and delete QoS.

No.
Select the number to use when registering on the QoS table.
When you select a registered number, the registered QoS information is displayed.

Network address
Enter the network address of the target on which to perform QoS.
**Subnet**
Enter the subnet mask values of the target on which to perform QoS.

**Tip**
The subnet mask value represents the number of bits from the left side of the network address.

**Port**
Enter the port number for the data traffic of the device (e.g. HTTP:80).

**Protocol**
Select the protocol.

**DSCP**
Set a value to mark the data traffic (0 ~ 63). This value is set in the DSCP field included in the IP header of the data traffic.

**Set**
Used when registering on the QoS table. QoS is set according to the following procedure:

1. Select No. from No., and enter the necessary conditions for **Network address**, **Subnet**, **Protocol** and/or **Port No.**.
2. Enter values in **DSCP**.
3. Click **Set** and configure the QoS.

**Delete**
select No. to delete the setting and click **Delete**.

**Up**
Increases the priority of the rule. Select a rule from the QoS table to prioritize and click **Up**.

**Down**
Decreases the priority of the rule. Select a rule from the QoS table to lower its priority and click **Down**.

**QoS table**
Displays the list of registered QoS information. If multiple conditions match, the rule with the smallest number has priority.

**IPv6 QoS**
Select **On** to configure the QoS setting for IPv6.

**Rule**
Used to register, edit and delete QoS.

**No.**
Select the number to use when registering on the QoS table. When you select a registered number, the registered QoS information is displayed.

**Network address**
Enter the network address of the target on which to perform QoS.

**Prefix**
Enter the prefix value of the target on which to perform QoS.

**Tip**
The prefix value represents the number of bits from the left side of the network address.

**Port**
Enter the port number for the data traffic of the device (e.g. HTTP:80).

**Protocol**
Select the protocol.

**DSCP**
Set a value to mark the data traffic (0 ~ 63). This value is set in the DSCP field included in the IP header of the data traffic.

**Set**
Used when registering on the QoS table. QoS is set according to the following procedure:

1. Select the number you want to register from No. and enter the necessary conditions for **Network address**, **Prefix**, **Protocol** and **Port No.**.
2. Enter values in **DSCP**.
3. Click **Set** and configure the QoS.

**Delete**
select No. to delete the setting and click **Delete**.

**Up**
Increases the priority of the rule. Select a rule from the QoS table to prioritize and click **Up**.

**Down**
Decreases the priority of the rule. Select a rule from the QoS table to lower its priority and click **Down**.
QoS table
Displays the list of registered QoS information. If multiple conditions match, the rule with the smallest number has priority.

Tip
To attain QoS of data traffic, the target device must be connected to a router or switch that supports the QoS function.

OK/Cancel
See “Buttons common to every menu” on page 25.

Dynamic IP address notification
Tab — Notifying the IP Address
When Obtain an IP address automatically (DHCP) is selected in the Network tab, you can send notification of completion of the network settings using the SMTP or HTTP protocol.

**e-Mail (SMTP) notification**
Select **On** to send an e-mail when the DHCP setting is completed.

**SMTP server name**
Type the name or IP address of the SMTP server for sending an e-mail, using up to 64 characters.

**SMTP port number**
Enter a port number from 25 to 65535. The standard port number is 25. If TLS is enabled, the standard port number for SMTPs is 465.

**Use TLS**
To use the encryption function by TLS, set to **On**.

**Note**
The model on sale in China does not support the TLS function.

**STARTTLS**
To use the encryption function by STARTTLS, set to **On**.

**Note**
The model on sale in China does not support the STARTTLS function.

**Authentication**
Select the authentication required when you send an e-mail.

**Off**: Select if no authentication is required when an e-mail is sent.

**On**: Select if authentication is required when an e-mail is sent. Select one of the authentication methods from the following and specify the following as required.

- **SMTP**: Select when SMTP authentication is required.
- **POP before SMTP**: Select when POP before SMTP authentication is required.

**Note**
When you set **Authentication** to **On**, make sure to select either or both **SMTP** or/and **POP before SMTP**.

**POP mode**
Select POP3 or APOP as the authentication method for POP authentication.

**Note**
The model on sale in China does not support the APOP authentication.

**Wait time after POP**
Set the waiting time in **POP before SMTP** before SMTP authentication after POP authentication is completed. Timeout can be set from 0 to 10,000 msec.

**POP server name**
It is necessary when **POP before SMTP** is selected for **Authentication**.
Type the POP (receiving mail) server name, using up to 64 characters. Or type the IP address of the POP server. This setting is necessary when the SMTP server that sends e-mails performs authentication using the POP user account.

**POP port number**
Enter a port number from 110 to 65535.
The standard port number is 110. If TLS is enabled, the standard port number for POP3s is 995.

**Authentication mode**
Select Login or CRAM-MD5 as the authentication method for SMTP authentication.

**Note**
The model on sale in China does not support the CRAM-MD5 authentication.

**User name, Password**
Type the user name and password of the owner of the mail account, using up to 64 characters. This setting is necessary when the SMTP server that sends e-mails performs authentication.

**Recipient e-mail address**
Type the recipient e-mail address, using up to 64 characters. You can specify only one recipient e-mail address.

**Administrator e-mail address**
Type the e-mail address of the camera administrator, using up to 64 characters. This is used as the reply address or the address for a system mail from the mail server.

**Subject**
Type the subject/title of the e-mail, using up to 64 characters.

**Message**
Type the text of the e-mail using up to 384 characters. (A line break is equivalent to 2 characters.) You can describe the information of the acquired IP address, etc., using the special tags mentioned below.

**HTTP notification**
Select On to output a command to the HTTP server when the DHCP setting is completed. Using this function, you can configure a useful system, for example, to view the access log stored in the HTTP server, or start an external CGI program.

**URL**
Specify the URL to send an HTTP request, using up to 256 characters. The URL is normally written as follows:

```
http://[IPv6 address]
http://[IPv6 address]: port
```

- **ip_address**: Type the IP address or host name of the host to which you want to connect.
- To enter an IPv6 address:
  ```
  [IPv6 address]: port
  ```

**Proxy server name**
When you send an HTTP request via a proxy server, type the name or IP address of the proxy server, using up to 64 characters.

**Proxy port number**
Specify the port number when you send an HTTP request via the proxy server. Set a port number between 1024 and 65535.

**Method**
Select the HTTP method GET or POST.

**OK/Cancel**
See “Buttons common to every menu” on page 25.

**About the special tags**
You can use the following five special tags to allow notification of the settings acquired by DHCP, such as an IP address. Type the tags in the parameter section of the URL that you described in the Message field of the HTTP.

- **<IP>**
  Use this tag to embed the IP address acquired by DHCP in the text or parameter.

- **<HTTPPORT>**
  Use this tag to embed the specified HTTP server port number in the text or parameters.

- **<MACADDRESS>**
  Use this tag to embed the MAC address of the interface, whose IP address was acquired by DHCP, in the text or parameter.

- **<MODELNAME>**
  Use this tag to embed the camera’s model name in the text or parameter.

- **<SERIAL>**
  Use this tag to embed the camera’s serial number in the text or parameter.
Setting the SSL function — SSL Menu

When you click SSL in the Administrator menu, the SSL menu appears. Use this menu to configure the SSL or TLS function. (called “SSL” hereafter)
The settings allows the camera to communicate with the client PC by using SSL.
SSL menu consists of the Common tab and CA certificate tab.

Notes
• The model on sale in China does not support the SSL function.
• When using the SSL function, always configure the settings after setting the date and time of the camera. If the date and time are not correctly set, it may cause browser connection problems.

Common tab

SSL function
On: Select this to use the SSL function. When Allow HTTP connection for some clients is selected, both HTTP and SSL connections are allowed. When Allow HTTP connection for some clients is not selected, only SSL connection is allowed.

When Internet Explorer is used
When SSL session is established, appears in the right of the address bar on your web browser.

Off: Select this to not use the SSL function. Only HTTP connection is allowed with the camera.

When you use SSL connection for the first time
When you use SSL connection only with the SSL function On, you cannot access the camera if the SSL function does not work properly.
In this case, you must reset the camera to the factory settings. (All settings will be initialized.) To avoid this, check that SSL connection is possible by performing the following steps.

1. Set the SSL function to On, and select Allow HTTP connection for some clients.
2. Click OK to close the main viewer and the setting window.
3. Display the main viewer in SSL connection. Refer to “Using the SSL function” on page 8 for connection.
4. After checking that SSL connection is possible, cancel Allow HTTP connection for some clients selected in step 1.

Even if the setting window or the browser is closed as SSL connection will load the camera down; therefore, not all images may be downloaded, and the [x] mark may appear when the camera accesses the setting window from the browser. In this case, reload the window. Press the F5 key on the keyboard to reload.

Certificate options
Select an installation mode of the certificate.

Use an external certificate: Uses the certificate including private key information issued by a CA.
The PKCS#12 and PEM formats are supported.

SSL is not available when Certificate options-Use an external certificate is selected, or certificate and private key password is not set properly even SSL is set to “ON”
Use a self-signed certificate (For test use): This mode uses the certificate and private key pair generated by “Generating a self-signed certificate” on page 48. Private key information corresponding to the certificate is stored in the camera. You do not need to install an external certificate. However, you cannot execute the existence proof that is one of the SSL functions for the following reasons.
- The private key generated in the camera is self-signed by the camera.
- A prepared value is set for a distinguished name (Common name, etc).
- The certificate is not issued by a trusted CA.
For reasons of security, we recommend using this mode only when there is no problem even if perfect security is not saved.

Notes
- When Use a self-signed certificate (For test use) is selected, the Security Alert dialog appears on the SSL connection with a browser. For details, refer to “Using the SSL function” (page 8).
- SSL connection may be impossible due to the type of certificate installed in the camera. In this case, refer to “How to install the CA certificate” on page 50 and install.

Certificates
Import, display or delete the certificate.

To import the certificate
Click Browse... to select the certificate to be imported. Click Submit to import the certificate, and the selected file to the camera.

Note
The import process becomes invalid if the selected file is not a certificate or the imported certificate is not allowed.

Generating a self-signed certificate
A self-signed certificate can be generated in the camera to be used when Use a self-signed certificate (For test use) is selected from Certificate options. Click Generate to generate a self-signed certificate in the camera. Clicking Generate again after Generate has been clicked once will update the self-signed certificate stored in the camera.

Note
Make sure to set the date and time on the camera correctly before performing this operation. If the date and time are not correctly set, it may cause browser connection problems.

To display certificate information
When the certificate has been set in the camera correctly, its information appears on Status, Issuer DN, Subject DN, Validity Period and Extended Key Usage.

Status
Shows if the status of the certificate is valid or invalid. The following statuses are recognised.
Valid: The certificate is correctly stored and set.
Invalid: The certificate is not correctly stored and set. Possible causes are as follows:
- Use an external certificate is selected and the private key password included in the certificate is not specified correctly.
- Use an external certificate is selected and the private key password is specified in spite of the fact that the key pair in the certificate is not encrypted.
- Use an external certificate is selected and the key pair is not included in the certificate.
- Use a self-signed certificate (For test use) is selected without the self-signed certificate being generated.

Note
When the certificate to be imported is of PKCS#12 format and the private key password is not set correctly, <Put correct private key password> is displayed in the boxes of Issuer DN, Subject DN, Validity Period and Extended Key Usage. Specify the correct private key password to confirm the information of the certificate.

To delete the imported certificate or self-signed certificate
Click Delete to delete the certificate or self-signed certificate imported to the camera.

Private key password
Type the password for the private key information included in the certificate using up to 50 characters. This text box is active only when Certificate options is set to Use an external certificate.
Leave the text box blank if the private key information included in the certificate is not encrypted. If no private key password is set in the camera, an active text field is displayed and this allows a password to be entered.
If a private key password is already set, it is displayed as an inactive text field.

Reset
To change the private key password, click this button. The current password is cleared and the password text box becomes active to allow a new password entry.
Click Cancel at the bottom of the menu if you want to cancel changing the private key password after clicking Reset. Doing so restores the other setting items in the Client certificate tab to the previous settings.

**OK/Cancel**

See “Buttons common to every menu” on page 25.

**Note**

When you click OK after changing SSL setting, close the main viewer and the setting window once.

**CA certificate tab — Adding the CA certificate for client authentication**

In this tab, you can manage the CA certificate needed for the camera to use the client authentication of the SSL function.

**Note**

When using the client authentication, the personal certificate must be successfully installed on the PC to use it. If this preparation cannot be performed, do not configure settings on this tab. Otherwise, you may not be able to connect to the camera.

**SSL client authentication**

You can configure whether to enable the client authentication of the SSL function.

**Trusted CA certificate 1 to 4**

You can import a trusted CA certificate (route certificate, etc.) to the camera. Up to four certificates from trusted CAs can be imported to the camera. Only PEM format is supported.

To import the CA certificate

1. Click Browse… to select the CA certificate to be saved in the camera.
2. Click Submit.
   The selected file will be imported to the camera.

**Note**

Import process will be invalid if the selected file is not a CA certificate.

To display the information of the CA certificate

When the CA certificate has been saved in the camera correctly, its information appears on Issuer DN, Subject DN, Validity Period, and Extended Key Usage for your reference.

To delete the CA certificate

Click Delete to delete the selected CA certificate from the camera.

**Tip**

To enable a client certificate, it is recommended that the settings are configured following the procedure below:

① Import the necessary CA certificate.

② Set SSL client authentication to On and click OK.

**Note**

When you set SSL client authentication to On and click OK, the camera will immediately operate to enable client authentication. Make sure that the personal certificate on your PC is successfully installed.

**OK/Cancel**

See “Buttons common to every menu” on page 25.
How to install the CA certificate

The camera may not be connected because the browser (Internet Explorer) does not display whether the certificate will be accepted or not due to the type of certificate. In this case, install the CA certificate as follows.

1. Save in the PC the certificate of CA which has signed the certificate to be installed in the camera. The extension of the certificate file is normally “.cer”. Double-click this file. The following Certificate dialog appears.

2. Click Installation Certificate.... The Certificate Import Wizard appears.

3. Click Next.

4. Select Automatically selects the certificate store based on the type of certificate and click Next. Completing the Certificate Import Wizard appears.

5. Check the contents, then click Finish. The CA certificate will be installed.
To remove an installed CA certificate

1 In Internet Explorer, click in the order Tools, Internet options, Content tab and Certificates. The Certificates dialog appears.

2 Select the certificate you want to remove. The CA certificate is usually stored in Trusted Root Certification Authorities.

3 Click Remove. Do you want to delete the certificate appears to confirm.

4 Click Yes. The certificate will be removed. There may be a case that a certificate cannot be removed by the steps above due to the type of certificate. Check the installation condition and remove it following the steps below.

**Note**

You need to log in as Administrator to perform these steps.

1 Open Run... of the Windows menu, then enter mmc and click OK.

2 Select File in the Console 1 window and Add/Remove Snap-in... (when Windows XP Professional is used) Add/Remove Snap-in... dialog appears.

3 Click Add to display Add Stand-alone Snap-in dialog. You need to follow this step if using Windows XP Professional.

4 Select Certificates from the list, then click Add. Certificate Snap-in is displayed.

5 Select Computer account as the certificate administrated in this Snap-in, then click Next.

6 Select Local Computer as the computer administrated in this Snap-in, then click Finish.

7 Close Add Standalone Snap-in (for Windows XP Professional only) and Add/Remove Snap-in... dialogs. The items for administrating Certificates appears in the Console Route window. Confirm the relevant certificate, then remove it.
Using the 802.1X Authentication Function — 802.1X Menu

When you click 802.1X in the Administrator menu, the 802.1X menu appears. Use this menu to configure the wired port-based authentication in compliance with the 802.1X standard. The 802.1X menu consists of three tabs: Common, Client certificate and CA certificate.

Notes
• To use the 802.1X authentication function, you need knowledge of the 802.1X authentication (WPA and WPA2) and digital certificate. To establish an 802.1X network, you need to configure the authenticator, authentication server and other elements. For details on these settings, refer to the manual of the corresponding equipment.
• When using the 802.1X authentication function, always configure the settings after setting the date and time of the camera. If the date and time are incorrect, port authentication may not be performed correctly.

System configuration of 802.1X network
The following figure shows a general system configuration of an 802.1X network.

Supplicant
A supplicant is a device that connects to the authentication server to join the network. This unit serves as a supplicant in the 802.1X network. The supplicant can enter the 802.1X network after appropriate authentication by the authentication server.

Authenticator
An authenticator forwards certificate request data or response data that the supplicant or authentication server issues to the other party. Normally a hub or router serves as an authenticator.

Authentication server
An authentication server has a database of connecting users and verifies if the supplicant is a valid user or not. It can also be called RADIUS server.

CA (Certificate Authority)
A CA issues and manages certificates of the authentication server (CA certificates) and user certificates. The CA is essential for certificate-based user authentication. Normally a CA is located inside an authentication server.

Note
This camera supports EAP mode in which the supplicant and the server authenticate using the certificate. This mode requires a CA to issue the certificate.

Common Tab — Basic setting of 802.1X authentication function
802.1X authentication function
This item is used for enabling/disabling the 802.1X authentication function for wired ports. The wired interface status can also be checked here.

Wired interface
To activate the 802.1X authentication function for wired ports, select On.
**Wired interface status**
Shows the authentication status of the 802.1X authentication function for wired ports. Click **Refresh** to update the status.

**EAP identity**
Type the user name to identify the client in the 802.1X authentication server using 3 to 253 characters.

**EAP password**
A supplicant EAP password is needed to be inputted when PEAP is selected with EAP condition. The password can contain half-width letters and the length should be between 1 to 50.

**Reset**
To change the once set EAP password, click **Reset** and clear the current password. A new password can be entered.

**Note**
After you click **Reset**, if you wish to cancel the EAP password change, click **Cancel** at the bottom of the screen. This will cancel other changes made to the settings.

**EAP method**
You can select the authentication method used with the authentication server. This device supports TLS and PEAP.

**TLS**: By this method, the supplicant and the server authenticate each other using a certificate. This enables secure port authentication.

**PEAP**: By this method, an EAP password is used for the supplicant authentication and a certificate is used for server authentication.

**OK/Cancel**
See “Buttons common to every menu” on page 25.

---

**Client certificate Tab**
When TLS is selected as the EAP method, client certificate is imported for authentication at the camera.

**Client certificate**
Import, display or delete the client certificate.

**To import the client certificate**
Click **Browse…** to select the client certificate to be imported. Then click **Submit**, and the selected file will be imported to the camera.

**Note**
The import process becomes invalid if the selected file is not a client certificate or the imported client certificate is not allowed.

**To display the information of the client certificate**
When the client certificate has been saved in the camera correctly, its information appears on **Status**, **Issuer DN**, **Subject DN**, **Validity Period** and **Extended Key Usage**.

**Status**: Shows if the status of the client certificate is valid or invalid.

- **Valid** means the client certificate is correctly stored and set.
- **Invalid** means the client certificate is not correctly stored and set.

Possible causes of **Invalid** are as follows:
- The private key password included in the client certificate is not specified correctly.
- The private key password is specified in spite of the fact that the key pair in the client certificate is not encrypted.
- The key pair is not included in the client certificate.
Note

When the client certificate to be imported is of PKCS#12 format and the private key password is not set correctly, “<Put correct private key password>” is displayed in the boxes of Issuer DN, Subject DN, Validity Period and Extended Key Usage. Specify the correct private key password to confirm the information of the certificate.

To delete the client certificate
Click Delete, and the client certificate stored in the camera will be deleted.

Private key password

Type the password for the private key information included in the client certificate using up to 50 characters. Leave the text box blank if the private key information included in the client certificate is not encrypted. If no private key password is set in the camera, the text box is activated to allow entering of a password. If a private key password is already set, it is displayed as turned letters.

Reset

To change the private key password, click this button. The current password is cleared and the password text box is actived to allow new password entry.

Note

Click Cancel at the bottom of the menu if you want to cancel changing the private key password after clicking Reset. Doing so restores the other setting items in the Client certificate tab to their previous settings.

OK/Cancel

See “Buttons common to every menu” on page 25.

CA certificate Tab

You can import a trusted CA certificate (server certificate or route certificate) to the camera. Up to four certificates from trusted CAs can be imported to the camera. Only the PEM format is supported.

To import the CA certificate
Click Browse… to select the CA certificate to be imported. Then click Submit, and the selected file will be imported to the camera.

Note

Import process becomes invalid if the selected file is not a CA certificate.

To display the information of the CA certificate
When the CA certificate has been saved in the camera correctly, its information appears on Issuer DN, Subject DN, Validity Period and Extended Key Usage.

To delete the CA certificate
Click Delete, and the CA certificate stored in the camera will be deleted.
Setting the 802.1X authentication function — Example of Windows Server 2003

This section explains how to configure the authentication server and CA using Microsoft Windows Server 2003.

Note
As this section describes authentication based on the user interface in English on Windows Server 2003, the UI terminology and page configuration may be different depending on the version of the Operating System or Service Pack and patch update status.

Before setting
Perform the following settings before configuring an 802.1X network.

Active Directory (domain controller)
The following setting example is based on the assumption that the Active Directory has been configured.

Windows IAS configuration

CA configuration
To configure the CA, perform the following steps:

1. Open Add or Remove Programs from Control Panel of the Windows menu.
2. Select Add/Remove Windows Components.
3. Add Certificate Services in the Component menu.
4. Select Enterprise root CA on CA Type.
5. Type the CA name on Common Name for this CA, and configure the CA.

Creating a security group for Active Directory

1. Open Active Directory Users and Computers from Administrative Tools of the Windows menu.
2. Select Users of the domain with which you want to perform 802.1X connection.
3. Select New from the context menu, then select Group and configure the group for 802.1X connection.
   For example, the group “Wired_802.1X_Group” is assumed for explanation purposes.

Configuring the Internet Authentication Service

1. Open Internet Authentication Service from Administrative Tools of the Windows menu.
2. Click Register Server in Active Directory on the operation menu.
3. Read the displayed precautions carefully and click OK to accept them.

Then, continue to configure the EAP-TLS policy.
6. Select Set up a custom policy.
7. Set the following items:
   Policy name: Type “Allow 802.1X Access” as an example.
   Policy conditions: Click Add and add the following items:
   – NAS Port-Type: Ethernet, Wireless-IEEE802.11, Wireless-Other and Virtual (VPN)
   – Windows-Groups: Wired_802.1X_Group
   Permissions: Select Grant remote access permission.
   Edit Profile:
   – Dial-in Constraints tab: Specify the session time out period during which the client is allowed to be connected, as required.
   – Authentication tab: Delete checks from all the boxes. Click EAP Method and add Smart Card or other certificates.

Then, continue to configure the RADIUS client.
8. Select RADIUS Clients and right-click.
9. Select New RADIUS Client from the context menu.
10 Set the following items:
   Friendly name: Type “authenticator” as an example.
   Client address (IP or DNS): IP address of the authenticator
   Client-Vender: RADIUS Standard
   Shared secret: Specify the shared secret to be set in the authenticator.

Adding a user

1 Open Active Directory Users and Computers from Administrative Tools of Windows menu.

2 Select Users of the domain with which you want to add a user and right-click.

3 Select New from the context menu, then select User.

4 Set the following items to configure a new user: For example, the log-on user name “1XClient” is assumed for explanation purposes.
   First name: 1XClient
   User logon name: 1XClient@<domain name>
   Password: Specify a password. Then select Password never expires in account options.

5 Select the user to be added and right-click.

6 Select Properties from the context menu.

7 Set the following items:
   Dial-in tab: Select Allow access in Remote Access Permission (Dial-in or VPN)
   Member Of tab: Add “Wired_802.1X_Group”.

The preparations for configuring a 802.1X network are now completed. Proceed to issue the certificate to be imported to the camera.

Issuing the CA certificate

Prepare a Windows client PC (called “client PC” hereafter) to temporarily store the certificate, and configure so that the client PC and Windows Server 2003 computer can be connected through the network.

1 Start Internet Explorer on the client PC.

2 Type the CA’s URL in the address bar, and click Go To.
   The CA’s URL is normally as follows:
   http://<address of the CA>/CertSrv/

The “Microsoft Certificate Services” page opens.

Note

If the Microsoft Certificate Service page does not appear using the URL above, check the following:
- Is the service of Web site enabled on Internet Information Service (IIS)?
- Is Certificate Services enabled?
- Does the firewall or antivirus software setting on the client PC block connection?
- Are the network configuration and Internet Explorer settings on the client PC correct?

3 When Internet Explorer prompts entering the log-in user and password, type the user name as follows. Example: when the user name is “1XClient” and the domain name “localnetwork.net”
   1XClient@localnetwork.net

4 Click Download a CA certificate, certificate chain, or CRL.

5 Select Base 64 in Encoding method and click Download CA certificate.
   The “File Download” dialog opens.

6 Specify the file storage location and save the CA certificate.
   After saving the CA certificate, import it to the camera. The CA certificate import procedure is completed.

Downloading the client certificate

This section explains the procedure to downloading the client certificate.

1 Start Internet Explorer on the client PC and type the CA’s URL in the address bar.
   The CA’s URL is normally as follows:
   http://<address of the CA>/CertSrv/

2 Click Go To.
3 Type the log-in user name and password correctly. The “Microsoft Certificate Services” page opens.

4 Click Request a certificate, advanced certificate request and Create and submit a request to this CA in sequence.

5 Set the following items.

   ![Certificate Request Setup](image)

   **Certificate Template:** User
   **Key Options:** Create new key set
   - CSP: Microsoft Enhanced Cryptographic Provider v1.0
   - Key Size: 1024
   - Check Mark keys as exportable.
   **Additional Options:** Select SHA-1 for Hash Algorithm.

6 Click Submit. The message “The certificate you requested was issued to you.” appears.

7 Click Install this certificate, to install the certificate in the certificate store on the client PC.

8 Click Internet Options, Content and Certificates of Internet Explorer in sequence. The new client certificate is displayed in the Personal tab.

9 Select the installed certificate and click Export... The “Certificate Export Wizard” opens.

10 Click Next and select as follows.

   **Do you want to export the private key with the certificate?:** Select Yes, export the private key.
   **Select the format you want to use:** Select Personal Information Exchange – PKCS#12 (PFX).
   **Password:** Specify the private key password.
   **File to export:** Specify the name of the file to be exported.

   The certificate is exported. Import the exported file to the camera as the camera’s client certificate. For details, see “To import the client certificate” in the Client certificate tab on page 53.
Setting the User — User Menu

When you click User in the Administrator menu, the User menu appears. Use this menu to set the user names and passwords of Administrator and up to 9 kinds of users (User 1 to User 9), and the access right of each user.

**Administrator**
Specify User name, Password and Re-type password.

**User 1 to 9**
Specify User name, Password, Re-type password and Viewer mode for each user ID.

**User name**
Type a user name between 5 and 16 characters.

**Password**
Type a password between 5 and 16 characters.

**Re-type password**
To confirm the password, retype the password that you typed in the Password box.

**Viewer mode**
When the user is authenticated for logging in the main viewer, select the viewer mode to be displayed after authentication.

- **Full**: The user can operate all functions in this mode.
- **Pan/Tilt**: In addition to the Light mode, the user can operate pan/tilt/zoom.
- **Preset position**: In addition to the Light mode, the user can perform the camera’s preset position settings.
- **Light**: In addition to the View mode, the user can select the image size of the main viewer, select codec and capture a still image.
- **View**: The user can only monitor the camera image.

For the functions available for each viewer mode, see “Administrator and User” on page 12.

**Viewer authentication**
Set whether the user is authenticated or not when the main viewer is displayed.

- **On**: The main viewer is displayed in accordance with the viewer mode of the authenticated user.
- **Off**: Select the viewer mode of the main viewer which is displayed without authentication from Full, Pan/Tilt, Preset position, Light or View.

**OK/Cancel**
See “Buttons common to every menu” on page 25.
Setting the Security — Security Menu

When you click Security in the Administrator menu, the Security menu appears. This allows you to control which computers can have access to the camera. Likewise, when using IPv6, security settings can be configured for each network. The Security menu consists of the Setting and Referer check tabs.

Setting Tab

Security function
To activate the security function, select On.

Default policy
Select the basic policy of the limit from Allow and Deny for the computers specified in the Network address/Subnet 1 to Network address/Subnet 10 menus below.

Network address/Subnet 1 to Network address/Subnet 10
Type the network addresses and subnet mask values that you want to allow or deny access to the camera. You can specify up to 10 network addresses and subnet mask values. For a subnet mask, type 8 to 32. (In the case of IPv6, enter a value between 8 and 128.) Select Allow or Deny from the drop-down list on the right for each network address/subnet mask.

Tip
The subnet mask value represents the bit number from the left of the network address. For example, the subnet mask value for “255.255.255.0” is 25.
If you set 192.168.0.0/24 and Allow, you can allow access from computers having an IP address between “192.168.0.0” and “192.168.0.255”.

Referer check tab

Referer check checks if the web page which requires access is authorized when the camera is accessed. If the web page is not authorized, the camera denies access of the web page to the camera. If you want to access from web pages other than the one that the camera provides, register their host names and port numbers in the Exception list.

Referer check
Select the checkbox for the Referer check.

Exception list
Register the hosts that are not targeted for the Referer check.

No.
Select the registered numbers of the Exception list.

Host name
Type the host name or IP address of the PC that supplies the web page you want to register on the Exception list.

Port No.
Type the host name or the port number of the PC that supplies the web page you want to register on the Exception list.

Note
You can access the camera even from a computer having an IP address whose access right is set to Deny, if you enter the user name and password set for the Administrator boxes in the User menu.

OK/Cancel
See “Buttons common to every menu” on page 25.
**Set**
Register the values of the **Host name** and **Port No.**, you typed to the list of the selected number.

**Delete**
Delete the contents of the list selected in **No.**

**OK/Cancel**
See “Buttons common to every menu” on page 25.

---

### Saving the Camera Position and Action — Preset position Menu

When you click **Preset position** in the Administrator menu, the Preset position menu appears. This allows you to save the camera’s pan, tilt and zoom positions and set position (programmed action of the camera).

The Preset position menu consists of 2 tabs: **Position** and **Preset tour**.

The Preview screen is displayed.
Every setting item can be set to Image 1 and Image 2 respectively.

**Notes**
- Preset position menu is not available when **SolidPTZ** is set to **On** in the Camera menu-Video codec tab.
- Only Image 1 can be set when **SolidPTZ** of Image 2 is set to **Off**.

#### Position Tab — Saving pan/tilt/ zoom position

You can save up to camera positions (pan, tilt and zoom positions).

---

**Preview screen**
This screen is for monitoring images and setting preset positions.
For details of each button, please refer to the Control bar of the Plug-in free viewer (page 16).

**Image**
Select the image to configure.
Home position setting
Set the current camera position as the home position.

Set
Click to save the current pan, tilt and zoom positions as the home position. To move the camera to the home position, click \( \) in the control panel (page 15).

Reset
Click to reset the home position to the factory-set position.

Position at alarm
This unit can synchronize a preset position with Sensor input or with Camera tampering detection. If an alarm is detected by the sensor input or the camera tampering detection function, the camera automatically moves to the corresponding preset position. If you do not want to synchronize with any preset number, select none.

Sensor input 1 (S1)
Select a preset position to synchronize with the alarm from Sensor input 1.

Camera tampering detection (TP)
Select the preset position to synchronize with the camera tampering detect alarm.

Preset
You can configure and save preset positions and thumbnails. Click Call to move the camera to a specified preset position and click Clear thumbnail to delete the thumbnail information for the specified preset position.

No.
Select a preset number from 1 to 8 from the drop-down list.

Name
Type the preset position name of the selected preset number using up to 32 characters.

Set
Click to save the current camera position to the selected preset number.

To save a preset position, operate as follows:

1. Move the camera to the position to be saved, while checking the image with the preview viewer.
2. Select a preset number for saving, and type the preset position Name.

3. Click the Set button. The camera position is saved.

Call
Click to move the camera to the preset position.

Clear Thumbnail
Click to delete the thumbnail of the specific preset position.

Thumbnail
Checking this checkbox registers a thumbnail when you register a preset position. Select a radio button to determine whether to register the current camera image as a thumbnail or to register with a specified image.

To specify an image, click Browse. Then click Submit.

Note
The maximum file size for images in JPEG format is approximately 50 KB.

Preset position list
By clicking Preset, you can view the information of the preset positions.

Copy
You can copy the preset position of Video 1 and Video 2. Select the preset position you want to copy, and then.

Rename
Select the preset position you want to rename, and then click Rename. You can enter characters. Press the enter (return) key to confirm.

Clear
You can delete preset positions.

OK/Cancel
See “Buttons common to every menu” on page 25.

Note
Only the setting items of Position at Alarm can be saved or cancelled by clicking OK/Cancel.
**Preset tour Tab — Setting a position tour**

The camera moves to the programmed positions sequentially (Tour).
Up to five programs can be set as Tours A to E.

**Preview screen**

This screen is for monitoring images and configuring preset tour settings.
For details of each button, please refer to the Control bar of the Plug-in free viewer (page 16).

**Image**

Select the image to configure.

**Tour**

Select On to enable the tour function.

**Resume time on inactivity**

This item becomes active when Tour is set to On.
With this item, you can select whether you restart or stop the tour after it has stopped by manual pan, tilt or zoom operation or by camera movement to the preset position triggered by an alarm.

On: Specify the wait time before the tour restarts, between 5 and 3600 seconds. The tour restarts automatically after the specified time has elapsed.
Off: The tour does not restart.

**Tour A to Tour E**

Configure Tour A to Tour E respectively.
Each tour setting consists of 5 items: On/Off, Sequence, Speed, Stay time, Effective period.
Select the tour to configure from the drop-down list.

**Sequence**

Set the sequence of the tour.
The preset positions saved using the Position tab are displayed in Preset position list.
Select the preset position from Preset position list, then click Add. The selected preset position is added in the Sequence list. Repeat this procedure to specify the preset positions in sequence.
To check a preset position, select it from Preset position list, and then click Call.
To delete a preset position from Sequence, select it, and then click Delete.
To change the order in Sequence, select the preset position and then click Up or Down.

**Speed**

Select the speed of camera movement between 1 and 23, or Fastest from the drop-down list. The camera moves faster with a higher number setting. The fastest speed is obtained with Fastest.

**Stay time**

Type a period of time during which the camera is to stay at each preset position, between 1 and 3600 seconds.

**Preview**

Previews the order of movements of the selected tour.
The operation speed and stop time do not influence the preview operation.

**Stop**

Stops the preview in action.

**Effective period**

Select the period during which the tour in activated.
Always: The tour can be activated any time.
Schedule: The tour is activated according to the schedule you have set.
Click Schedule, and the menu for the effective period is displayed. ("Setting the Schedule — Schedule Menu" on page 71.)

**Note**

You cannot set tours if the effective periods overlap each other.

**OK/Cancel**

See “Buttons common to every menu” on page 25.
Sending an Image via E-mail — e-Mail (SMTP) Menu

When you click in the Administrator menu, the e-Mail (SMTP) menu appears. Using the e-Mail (SMTP) function, you can send an e-mail with an attached image file that has been shot linked with an external sensor input or with the built-in detection functions. An image file can also be sent periodically. The e-Mail (SMTP) menu consists of three tabs: Common, Alarm sending and Periodical sending.

Common Tab — Setting the e-Mail (SMTP) Function

### e-Mail (SMTP)
Select On when you use the e-Mail (SMTP) function.

**Note**
The frame rate and operability on the main viewer may be reduced while a file is being transmitted by the e-Mail (SMTP) function.

### SMTP server name
Type the SMTP server name using up to 64 characters, or the IP address of the SMTP server.

### SMTP port number
Enter a port number from 25 to 65535. The standard port number is 25. If TLS is enabled, the standard port number for SMTPs is 465.

### Use TLS
To use the encryption function by TLS, select On.

**Note**
The model on sale in China does not support the TLS function.

### STARTTLS
To use the encryption function by STARTTLS, select On.

**Note**
The model on sale in China does not support the STARTTLS function.

### Authentication
Select whether authentication is required when you send an e-mail.

- **Off:** No authentication is required when an e-mail is sent.
- **On:** Authentication is required when an e-mail is sent.

Select one of the authentication methods from the following and specify the POP server name, User name and Password as required.

- **SMTP:** Select when SMTP authentication is required.
- **POP before SMTP:** Select when POP before SMTP authentication is required.

**Note**
When you set Authentication to On, be sure to select either or both SMTP or/and POP before SMTP.

### POP mode
Select POP3 or APOP as the authentication method for POP authentication.

**Note**
The model on sale in China does not support the APOP authentication.

### Wait time after POP
Set the waiting time in POP before SMTP before SMTP authentication after POP authentication is completed. Timeout can be set from 0 to 10,000 msec.

### POP server name
This is necessary when POP before SMTP is selected for Authentication.

Type the POP (receiving mail) server name using up to 64 characters, or type the IP address of the POP server. This setting is necessary when the SMTP server that sends e-mails performs authentication using the POP user account.
POP port number
Enter a port number from 110 to 65535. The standard port number is 110. If TLS is enabled, the standard port number for POP3s is 995.

Authentication mode
Select Login or CRAM-MD5 as the authentication method for SMTP authentication.

Note
The model on sale in China does not support the CRAM-MD5 authentication.

User name, Password
Type the user name and password of the user who owns the mail account using up to 64 characters. This setting is necessary when the SMTP server that sends e-mails performs authentication.

Recipient e-mail address
Type the recipient e-mail address using up to 64 characters. You can specify up to three recipient e-mail addresses.

Administrator e-mail address
Type the Administrator e-mail address using up to 64 characters. This address is used for reply e-mails and sending system messages from the mail server.

Subject
Type the subject/title of the e-mail using up to 64 characters. When Alarm sending of the Alarm sending tab is set to On, an e-mail sent in response to alarm detection will indicate the type of alarm in the subject. (S1) is added for sensor input detection, (TP) for camera interference detection, (MD) is additionally available for motion detection.

Message
Type the text of the e-mail using up to 384 characters. (A line break is equivalent to 2 characters.)

OK/Cancel
See “Buttons common to every menu” on page 25.

Alarm sending Tab — Setting the e-mail sending mode when detecting the alarm
Set to send an e-mail linked with alarm detection by the external sensor input or by the built-in detection functions.

Note
When more than two of the following settings are activated, the camera only creates two still images at the same time. A third still image cannot be created unless one of the previous two still images is sent.

e-Mail (SMTP) menu
– Alarm sending tab Alarm sending (when file attachment is set to On).
– Periodical sending Periodical sending

FTP client menu
– Alarm sending tab Alarm sending
– Periodical sending Periodical sending

Trigger menu
– Mail (SMTP)
– FTP Client

Alarm sending
Select On to set sending an e-mail linked with alarm detection.
File attachment
Set whether an image file (JPEG file) is to be attached to the e-mail or not.
When On is selected, the image file made using the settings below is attached. When Off is selected, only the message is sent.

Image file name
Type the file name you want to assign to the image to be attached to an e-mail. You can use up to 10 alphanumeric characters, – (hyphen) and _ (underscore) for naming.

Suffix
Select a suffix to be added to the file name.
None: No suffix is added. The image file name is assigned to the image to be sent via e-mail.
Date & time: The date & time suffix is added to the file name.
The date/time suffix consists of lower two-digits of the year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits), second (2 digits), and sequential number (2 digits), thus adding 14-digit number to the image file name.
Sequence number: A sequential number of 10 digits between 0000000001 and 4294967295 and two fixed digits 00 are added to the image file name.

Sequence number clear
Click Clear to reset the Sequence number suffix to 1.

Alarm
Select the alarm to be linked with e-mail notification.
Sensor input 1: The external sensor that is connected to sensor input of the camera I/O port.
Camera tampering detection: An alarm that is triggered when the camera detects tampering such as direction shifting or spray.
Interval: Set the interval at which you want to send an e-mail periodically after detection. E-mails are sent after a specified interval time until the Camera tampering detection setting is cleared or the detection setting is turned off. You can set the hour (H) and minutes (M) between 30 minutes and 24 hours (one day).
When file attachment is set to ON, a file is only attached to an initial mail and will not be attached to the following mails.
Motion detection: The alarm detected by the motion detection function. Click Detection, and the motion detection menu is displayed to allow you to set the motion detection function (page 72).

Effective period
Set the period during which alarm detection is effective.
Always: Alarm detection is always effective.
Schedule: You can specify the period during which alarm detection is effective.
Click Schedule and the menu for the effective period is displayed. (“Setting the Schedule — Schedule Menu” on page 71)

OK/Cancel
See “Buttons common to every menu” on page 25.

Periodical sending Tab — Setting the periodical e-mail sending mode
You can set to send e-mails periodically.

Note
When more than two of the following settings are activated, the camera only creates two still images at the same time. A third still image cannot be created unless one of the previous two still images is sent.

e-Mail (SMTP) menu
– Alarm sending tab Alarm sending (when file attachment is set to On).
– Periodical sending Periodical sending

FTP client menu
– Alarm sending tab Alarm sending
– Periodical sending Periodical sending

Trigger menu
– Mail (SMTP)
– FTP Client

Periodical sending
Select On when you want to use periodical e-mail sending.
Image file name
Type the file name of the image attached to the e-mail using up to 10 alphanumeric characters, – (hyphen) and _ (underscore). The actual image file name will be the specified image file name with a suffix and the extension .jpg.

Suffix
Select a suffix to be added to the file name used when the e-mail is sent.
None: The name of the sent file will be the image file name.
Date & time: The date & time suffix is added to the image file name. The date & time suffix consists of the year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minutes (2 digits) and seconds (2 digits), and sequential number (2 digits), thus adding a 14-digit number to the image file name.
Sequence number: A sequential number of 10 digits between 0000000001 and 4294967295 and two fixed digits 00 are added to the image file name.
Sequence number clear
Click Clear to reset the Sequence number suffix to 1.

Interval
Type the interval at which you want to send an e-mail periodically. You can set the hour (H) and minutes (M) between 30 minutes and 24 hours (one day).

Effective period
Set the period during which periodical sending will be effective.
Always: Periodical sending is always effective.
Schedule: You can specify the period during which periodical sending is effective.
Click Schedule and the menu for the effective period is displayed. (“Setting the Schedule — Schedule Menu” on page 71)

OK/Cancel
See “Buttons common to every menu” on page 25.

Sending Images to FTP Server — FTP client Menu
When you click FTP client in the Administrator menu, the FTP client menu appears. Use this menu to set up for capturing and sending still images to an FTP server. Using the FTP client function, you can send an image file that has been shot and recorded linked with external sensor input or the built-in detection functions to an FTP server. An image file can also be sent periodically.
The FTP client menu consists of three tabs: Common, Alarm sending and Periodical sending.

Common Tab — Setting the FTP client function

FTP client function
To activate the FTP client function, select On.

Note
The frame rate and operability on the main viewer may be reduced while a file is being transmitted by the FTP client function.

FTP server name
Type either the FTP server name to upload still images using up to 64 characters, or the IP address of the FTP server.

User name
Type the user name for the FTP server using up to 64 characters.

Password
Type the password for the FTP server using up to 64 characters.

Re-type password
To confirm the password, type the same characters as you typed in the Password box.
Passive mode
Set whether you use the passive mode of FTP server or not when connecting to the FTP server. Select On to connect to the FTP server using the passive mode.

OK/Cancel
See “Buttons common to every menu” on page 25.

Alarm sending Tab — Setting the FTP client action when detecting the alarm
Set to forward an image file to a specified FTP server linked with alarm detection by the external sensor input or by the built-in detection functions.

Note
When more than two of the following settings are activated, the camera only creates two still images at the same time. A third still image cannot be created unless one of the previous two still images is sent.

e-Mail (SMTP) menu
– Alarm sending tab Alarm sending (when file attachment is set to On).
– Periodical sending Periodical sending

FTP client menu
– Alarm sending tab Alarm sending
– Periodical sending Periodical sending

Trigger menu
– Mail (SMTP)
– FTP Client

Remote path
Type the path to the destination using up to 64 characters.

Image file name
Type the file name you want to assign to the images when sending to the FTP server. You can use up to 10 alphanumeric characters, – (hyphen) and _ (underscore) for naming.

Suffix
Select a suffix to be added to the file name.

Date & time: The date & time suffix is added to the image file name.
The date/time suffix consists of the year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits) and second (2 digits), and sequential number (2 digits), thus adding a 14-digit number to the image file name.

Sequence number: A sequential number of 10 digits between 0000000001 and 4294967295 and a sequential 2-digit number are added to the image file name.

Tip
A sequential number added to Date & time and Sequence number is used to identify individual files created with consecutive alarm events.

Sequence number clear
Click Clear to reset the Sequence number suffix to 1.

Alarm
Select the alarm to be linked with the file to be forwarded to the FTP server.

Sensor input 1: The external sensor that is connected to sensor input of the camera I/O port.

Camera tampering detection: An alarm that is triggered if the camera detects tampering, such as direction shifting or spray.

Motion detection: The alarm detected by the motion detection function.
Click Detection, and the Motion detection menu is displayed to allow you to set the motion detection function (page 72).

Note
When a preset position is set in the menu of Preset Position-Alarm linked position, the alarm is invalid if the camera is moved to a preset position.
Effective period
Set the period during which alarm detection is effective.

**Always:** Alarm detection is always effective.
**Schedule:** You can specify the period during which alarm detection is effective.

Click **Schedule** and the menu for the effective period is displayed. ("Setting the Schedule — Schedule Menu" on page 71)

OK/Cancel
See “Buttons common to every menu” on page 25.

Periodical sending Tab — Setting the periodical FTP client activity
You can set to send image files (JPEG files) to an FTP server periodically.

**Note**
When more than two of the following settings are activated, the camera only creates two still images at the same time. A third still image cannot be created unless one of the previous two still images is sent.

- **e-Mail (SMTP) menu**
  - Alarm sending tab **Alarm sending** (when file attachment is set to On).
  - Periodical sending **Periodical sending**

- **FTP client menu**
  - Alarm sending tab **Alarm sending**
  - Periodical sending **Periodical sending**

- **Trigger menu**
  - Mail (SMTP)
  - FTP Client

**Image file name**
Type the file name of the image sent to the FTP server using up to 10 alphanumeric characters, – (hyphen) and _ (under score).
The actual image file name will be the specified image file name with a suffix and extension .jpg.

**Suffix**
Select a suffix to be added to the file name sent to the FTP server.

- **None:** The name of the sent file will be the image file name.
- **Date & time:** The date & time suffix is added to the image file name.
  - The date & time suffix consists of the year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits) and second (2 digits), and sequential number (2 digits), thus adding a 14-digit number to the image file name.

- **Sequence number:** A sequential number of 10 digits between 0000000001 and 4294967295 and two fixed digits 00 are added to the image file name.

**Sequence number clear**
Click **Clear** to reset the Sequence number suffix to 1.

**Mode**
Select the periodical sending mode.

- **Periodical mode:** An image file is sent periodically according to the specified **Interval** and **Effective period**.
- **Tour mode:** An image file is sent each time the camera is moved to a preset position during the tour.

**Interval**
Type the interval at which you want to send images to the FTP server periodically. You can set the hour (H), minutes (M) and seconds (S) between 1 second and 24 hours (one day).

**Note**
The actual interval may be longer than the set value, depending on the image size, image quality setting, bit rate and the network environments.

**Effective period**
Set the period during which periodical sending is effective.

- **Always:** Periodical sending is always effective.
- **Schedule:** You can specify the period during which periodical sending is effective.

Click **Schedule** to display the menu for the effective period. ("Setting the Schedule — Schedule Menu" on page 71)

OK/Cancel
See “Buttons common to every menu” on page 25.
Setting the Alarm Output
— Alarm output Menu

When you click **Alarm output** in the Administrator menu, the Alarm output menu appears.
You can perform setting in this menu to control the alarm output of the I/O port on the rear of the camera
linked to alarm detection, the timer and the Day/Night function.
The Alarm output menu consists of one tab: **Alarm out 1**.

**Tip**
For details on connection of peripheral devices to the alarm output of the I/O port, refer to the supplied

### Alarm out 1 Tab

![Alarm output Menu](image)

**Alarm output**
To activate the alarm output function, select **On**.

**Mode**
Select the mode of the alarm output function.

- **Alarm**: Controls alarm output by synchronizing it with an external sensor input or the built-in detection functions.
  When **Alarm** is selected, the items **Sensor input 1**, **Camera tampering detection**, **Motion detection**
  and **Effective period** become active.
- **Timer**: Controls alarm output using the timer.
  Click **Schedule** and the menu for the effective period is displayed. ("Setting the Schedule — Schedule Menu" on page 71)

**Day/Night**: Controls the alarm output linked to the day/night function.

**Sensor input 1**
Select this option when you link the alarm output to an external sensor that is connected to sensor input of the camera I/O port.

**Camera tampering detection**
Select this option when you link the alarm output to the tampering detection, such as when the camera position is moved, or the camera is sprayed.

**Motion detection**
Select this option when you link the alarm output to the motion detection function.
Click **Detection**, and the Motion detection menu is displayed to allow you to set the motion detection function (page 72).

**Note**
In the case that the synchronized preset position is specified in **Position at alarm** in the Preset position menu, the alarm event that happens when the camera moves to the preset position will be invalid.

**Alarm duration**
Select the duration for which the alarm is output, between 1 and 60 sec.

**Effective period**
This item becomes active when **Mode** is set to **Alarm**.
Set the period during which the alarm detection is effective.

- **Always**: Alarm detection is always effective.
- **Schedule**: You can specify the period during which alarm detection is effective.
  Click **Schedule** and the menu for the effective period is displayed. ("Setting the Schedule — Schedule Menu" on page 71)

**OK/Cancel**
See “Buttons common to every menu” on page 25.
Setting the Operations from the Viewer — Trigger Menu

Click **Trigger** in the Administrator menu to display the Trigger menu. This allows you to select the activities that can be performed when the button on the Trigger panel is clicked on the main viewer.

### e-Mail (SMTP)
Checking this box allows you to select **e-Mail (SMTP)** on the Trigger panel in the main viewer. By clicking **e-Mail (SMTP)** a still image of the moment you click is captured, and your e-mail with the image file attached is sent to the specified mail address.

When you click **e-Mail (SMTP)**, the Trigger-e-Mail (SMTP) menu is displayed. You can set the necessary options here. The setting options and setting procedures are the same as those of the e-Mail (SMTP) menu (page 63).

### FTP client
Checking this box allows you to select **FTP client** on the Trigger panel in the main viewer. By clicking **FTP client** a still image of the moment you click is captured, and the image file is sent to the FTP server.

When you click **FTP client**, the Trigger-FTP client menu is displayed. You can set the necessary options here. The setting options and setting procedures are the same as those of the FTP client menu (page 66).

### Alarm output 1
Checking this box allows you to select **Alarm output 1** on the Trigger panel in the main viewer. You can control the alarm output by clicking **Alarm output 1**.

Select the alarm output control mode from **Toggle** or **Timer**.
- **Toggle**: Each time you run a trigger, On (short circuit) or Off (open) is switched.
- **Timer**: When you run a trigger, the alarm output is switched to On, and will automatically set to Off after the time specified in **Duration** has elapsed.

- **Duration**: When **Timer** is selected, specify the time for which the alarm output remains off, from 1 to 300 seconds.

### Day/Night
Checking this box allows you to select **Day/Night** on the Trigger panel in the main viewer. You can set the day/night function to On (night mode) or Off (day mode) by clicking **Day/Night**.
When you click **Day/Night**, the **Trigger-Day/Night** menu is displayed. You can set the necessary options here. The setting options and setting procedures are the same as those in the Day/Night tab of the Camera menu (page 36).

**Note**
The day/night function is invalid when **Day/Night** is set to **Auto** in the **Trigger-Day/Night** menu, even if you click **Trigger**.

**OK/Cancel**
See “Buttons common to every menu” on page 25.

---

### Setting the Schedule — Schedule Menu

When you click **Schedule** in the Administrator menu, the Schedule menu appears.

The Schedule menu consists of 6 tabs. This is the same menu as the Schedule menu that is displayed when you click **Schedule** to set the **Effective period** in the following menus.

- **Day/Night**: **Schedule** in the Day/Night tab of the Camera menu
- **Preset position (Image 1 or 2)**: **Schedule** in the Position Tour of the Preset position menu
- **e-Mail**: **Schedule** in the Alarm sending or Periodical sending tab of the e-Mail (SMTP) menu
- **FTP**: **Schedule** in the Alarm sending or Periodical sending tab of the FTP client menu
- **Alarm out**: **Schedule** in the Alarm out 1 tab of the Alarm output menu

Example: When setting e-Mail (SMTP) (Periodical sending) in the Schedule menu

#### Use the same time schedule every day
When this item is checked, the same **Start time** and **End time** are applied to all days. In that case, the **Start time** and **End time** of the day from **Mon** (Monday) to **Sun** (Sunday) cannot be input.

#### Mon (Monday) to Sun (Sunday)
The time period on the right of the checked day is the effective period of the schedule.

#### Start time, End time
Specify the start time and the end time.

**OK/Cancel**
See “Buttons common to every menu” on page 25.
Setting the Sensor input/ Camera tampering detection/Motion detection — Event detection Menu

When you click Event detection in the Administrator menu, the Event detection menu appears. The Event detection menu consists of the Sensor input, Camera tampering detection and Motion detection. SNC-DH120/DH220/EM520/ZM550 do not support Sensor input.

Only supported functions are displayed.

Sensor input tab — Set the sensor input

Sensor input mode
Set the direction of the detected input signal to the sensor input terminal of the camera.

Normally open: Detects the alarm when the sensor input is short-circuited.

Normally closed: Detects the alarm when the sensor input is open-circuited.

OK/Cancel
See “Buttons common to every menu” on page 25.

Camera tampering detection tab — Set the camera tampering detection

Camera tampering detection
Select On to activate the function to detect camera tampering, such as direction shifting or spray. When you select On, you can select the Sensitivity.

Sensitivity: Set the sensitivity of camera tampering detection to High, Middle or Low.

Detection status: Display the tampering detection state of the time when Camera tampering detection tab is opened. To clear the detection status, click Clear button.

OK/Cancel
See “Buttons common to every menu” on page 25.

Note
Activation of the camera tampering detection function may be delayed in the following conditions.

– When Auto slow shutter in the Camera menu- Picture tab is active.

– When Image 1 size is as follows in the Camera menu Video codec tab (SNC-CH220/CH260/DH220/ DH220T/DH260):
  1920 × 1440
  1600 × 1200
  1280 × 960
  1280 × 1024

– When Cropping is set to On in the Camera menu Video codec tab (SNC-CH220/CH260/DH220/ DH220T/DH260)

Motion detection tab — Set the motion detection

Motion detection detects moving objects in the camera image and outputs an alarm.

Notes

• Before actual use, perform an operation test and confirm that the motion detection function works correctly.

• Even when privacy masking is used, the motion detection function operates based on the images before masking is processed.

• The Motion detection menu may not be displayed depending on the function settings. To display the Motion detection menu, configure as follows.

  System menu- Installation tab (page 29)
  – Video Out: Off (SNC-ZB550/ZM550/ZM551)

  Camera menu-Video codec tab (page 37)
  – Cropping: Off.
  – SolidPTZ: Off.
  – Codec of Image 2: Off.

When the Motion detection menu is displayed for the first time

When you click Motion detection, “Security Warning” is displayed.
When you click Yes, ActiveX control is installed and the Motion detection menu is displayed.

**Notes**
- If **Automatic configuration** is enabled in the Local Area Network (LAN) settings of Internet Explorer, the image may not be displayed. In that case, disable **Automatic configuration** and set the Proxy server manually. For the setting of the Proxy server, consult your network administrator.
- When you install ActiveX control, you should be logged in to the computer as Administrator.

**Setting items for motion detection**

Use the settings tab to set the conditions for the motion detection function while observing camera images. This menu is the same as the settings menu displayed when you click **Detection** on Alarm transmission on the e-Mail (SMTP) menu, or on the FTP client menu. Click the desired item in the setting item list to set the respective detection area.

**Detection target**

- **All PTZ position** or **Preset position**

**VMD settings (VMD: Motion detection)**

Set detection area, detection response, detection response speed and detection size for Motion detection. Click the desired item in the setting item list to set the respective detection area.

**Detection area**

Specify the effective scope of motion detection.

**Note**

The frames shown on the monitor screen are not displayed on the image files sent or recorded with motion detection.

**Configuring the detection area**

The following procedure is used to configure the motion detection area:

1. Use the following buttons to specify the active area(s) and inactive area(s).

**Add detection area**

Clicking this button will add an active area window in the center of the screen. When you place the cursor on the area, the cursor changes to a crossed arrow, which you can drag to move the area. When you place the cursor on the vertex of the area, the cursor changes to

**Add non detection area**

Clicking this button will add an inactive area window in the center of the screen. When you place the cursor on the area, the cursor changes to a crossed arrow, which you can drag to move the area. When you place the cursor on the vertex of the area, the cursor changes to

**Delete Area**
Clicking this button will change the cursor to a button. While the cursor is a button, click on a part of the area to delete that area. After the deletion, the cursor will return to its original form. To exit this operation, click this button again.

**Add vertex**
Clicking this button will change the cursor to a button. In that state, when you click on a part of the side of the area, a vertex is added to that point. After the addition, the cursor will return its original form. To exit this operation, click this button again.

**Delete vertex**
Clicking this button will change the cursor to a button. In that state, when you click on a part of the vertex of the area, the vertex added to that point is deleted. After the deletion, the cursor will return its original form. To exit this operation, click this button again.

**Note**
The vertex can be moved in an outward direction but cannot be moved toward the inside of an area.

**Detection sensitivity**
Set the sensitivity of motion detection.

Set a value from 1 to 100. Clicking **Return to the default** changes the value to the default value.

**Detection response**
Set the response velocity of motion detection.

Set a value from 1 to 5. Clicking **Return to the default** changes the value to the default value.

**Detection size**
Specify the minimum detection size and maximum detection size of motion detection. To specify the detection size, you can either enter values or drag the vertexes of the area.

The area size is measured in pixels.
- When you place the cursor on the area, the cursor changes to a crossed arrow, which you can drag to move to the minimum detection size area and maximum detection size area.
- When you place the cursor on the vertex of the area, the cursor changes to . Drag and move the vertex to adjust the detection size.

**OK/Cancel**
See “Buttons common to every menu” on page 25.
Configuring the Viewer — Viewer Menu

Click **Viewer** in the Administrator menu to display the Viewer menu. Using this menu, you can select the viewer to use and configure advanced settings. The viewer menu consists of two tabs: **Layout** and **HTML output**.

### Layout tab

#### Homepage
Set the viewer or homepage to be displayed at the time of access.

**ActiveX viewer:** Displays the ActiveX viewer at time of access.

**Plug-in free viewer:** Displays the Plug-in free viewer at time of access.

**Custom:** Select the homepage to be displayed.

To store a homepage HTML file in the built-in flash memory, use the Custom Homepage function of SNC toolbox included in the supplied CD-ROM.

To display your Custom homepage perform the following operation:

1. Select **Custom**.
2. Type the path of the HTML file using up to 64 characters in the text box on the right of **Path**.
3. In **Selected memory**, select the memory in which the homepage is stored.

#### Header
Configure the setting for the bar menu displayed at the top of the viewer screen. Select **On** to display the header, and **Off** to hide it.

**Tip**

Even when you select **Off**, the Administrator menu can be displayed by entering the following URL in the address box of your Web browser.

Example: When the IP address of the camera is set to 192.168.0.100

http://192.168.0.100/<TAG>/14/index.html

Enter the following value to <TAG> according to the language you wish to use.

- **en**: English
- **ja**: Japanese
- **fr**: French
- **de**: German
- **it**: Italian
- **es**: Spanish
- **zh_hant**: Chinese (Traditional Chinese character)
- **zh_hans**: Chinese (Simplified Chinese character)
- **ko**: Korean
- **pt**: Portuguese

#### Button Style
Select **Standard** or **Simple**.

---

**SNC-CH115/CH120/CH160/CH220/CH260**

Administrating the Camera
**Logo**
To set the logo image, click **Browse** and specify the image to display. The image file format that can be used is GIF, PNG, JPEG. The maximum file size is 50 KB. The uploaded image is displayed as 150 × 480 pixel. Click **Delete header logo** to delete the log set on the Initialize Tab of system menu (page 31).

**Text color, Background color 1, and Background color 2**
Specify the background colors and font color. To specify the color, enter “#” followed by an RGB value in 6-digit hexadecimal. The first 2 digits after # represent red, the next 2 digits green, and the last 2 digits blue. Specify the brightness for each color. 256 brightness levels are available (00-FF).

**Camera list**
You can register cameras in the camera list. By selecting a registered camera on the viewer screen, you can see the images from the registered camera.

**Note**
The camera list can be set only when Plug-in free viewer is selected as the homepage.

**On/Off**
Select **On** to show the camera list, and **Off** to hide it.

**Style**
You can configure the camera list style.

**Background color**
Specify the background color of the camera list. The colors are specified in the same way as those for the header.

**Registering in Cameras**
Specify a number on the camera list and set the IP address, port number, and comment for each camera.

**Insert**: Click to register a camera in the camera list.

**Modify**: Click to edit a selected camera list.

**Delete**: Click to delete a selected camera list.

**Down**: Click to decrement the number indicating registered camera numbers.

**Up**: Click to increment the number indicating registered camera numbers.

**Text**

**Note**
The camera list can be set only when Plug-in free viewer is selected as the homepage.

**Text1 text, Text2 text and Text3 text**
Enter the text to be displayed on the viewer screen.

**Text1 link, Text2 link and Text3 link**
Specify the URL of the link to assign a link to the text.

**Text color, Background color 1, and Background color 2**
Specify the font color of the text and background colors. The colors are specified in the same way as specifying those for the header.

**Show comment if camera selected**
Select this option to display comments on the viewer screen.

**Monitor**
Configure the setting for the camera image display part of Plug-in free viewer.

**Note**
The camera list can be set only when Plug-in free viewer is selected as the homepage.

**Initial streaming**
Set the display method for camera image for streaming.

**Initial image size**
Set the initial camera image size.

**Initial image codec**
Set the initial codec mode.

**Image1**: Display the image set in Image 1 of **camera menu-video codec** tab when streaming starts.

**Image2**: Display the image set in Image 2 of **camera menu-video codec** tab when streaming starts.

**Image3**: Display the image set in Image 3 of **camera menu-video codec** tab when streaming starts.

**Note**
Image 1 is automatically displayed on the monitor screen if the selected camera from the **Camera list** is as follows:

– **Image2**: Codec of Image 2: **Off**.
– **Image3**: Image 3 function is not installed, or Codec of Image 3: **Off**.

You can check the settings for codec in Camera menu-Video codec tab.

**Initial PTZ**
Set the pan/tilt/zoom operation modes for streaming.

**No PTZ**: PTZ is not available when streaming starts.

**Area zoom**: Area zoom is available when streaming starts.
PTZ control bar: Display the PTZ operation bar when streaming starts.
Vector dragging: Vector drag is available when streaming starts.

Initial frame rate
Set the initial camera image frame rate.

Initial image
Set what to initially display on the camera image display area.

Still image: JPEG still images are acquired from the camera and displayed at start-up.
Specified image (URL): Specify a still image of your choice by URL at start-up.
Auto play: Run to start playback.
Blank: No display at start-up.
Click to start streaming: By ticking this when Still image or Specified image is selected, you can start play by clicking on the image.

Tip
If the menu display is Off, Blank cannot be selected.

Initial sound
Set the initial volume for when streaming starts. Check Muting for muting sound.

Note
This setting is valid only when SNC ActiveX viewer is selected for Streaming method from Setting of the Plug-in free viewer control bar. However, this unit is not equipped with audio functions.

Show menu
Set whether to show or hide operation buttons at the bottom of the camera image area.
Select On to display the menu, select Off to hide the menu.
When On is selected, the items below can be set:

Streaming: Displays the setting options of Streaming, if it is checked.
Image size: Displays the setting menu of Image size, if it is checked.
Frame rate: Displays the setting menu of Frame rate, if it is checked.
Preset position: Displays the setting menu of Preset position, if it is checked.
Trigger: Displays the setting options of Trigger, if it is checked.
PTZ operation: Displays the setting menu of PTZ operation mode, if it is checked.
Sound: Displays the setting menu of Sound, if it is checked.

Note
This unit is not equipped with audio functions.

Capture image: Displays the Capture image button, if it is checked.
Image codec: Displays the setting menu of Image codec, if it is checked.

OK/Cancel
See “Buttons common to every menu” on page 25.

HTML output tab
If the monitor is for personal use, this tab can be used to output sample source for HTML and script.
For details on the setting, refer to “Monitor” of the Layout tab.

Monitor
Displays a preview.
Preview: Displays a preview on the monitor based on the current settings.
Default: Resets the setting to that set in Viewer - Layout tab.

Note
The selected image size is not used for the preview screen.

Embedded script
Displays the sample source for script.

HTML sample
Displays the sample source for HTML.
Using the SNC toolbox

For details, see the Application Guide included in the supplied CD-ROM.

Tip

Download the latest installer or Application Guide of SNC toolbox from the following URL:
http://www.sony.net/ipela/snc/

Using the SNC audio upload tool — Transmitting Audio to Camera

The supplied SNC audio upload tool allows you to transmit audio from the microphone connected with the computer to the camera and upload the audio file for the voice alert function to the camera.

For details, see the Application Guide included in the supplied CD-ROM.
Using the SNMP

This unit supports SNMP (Simple Network Management Protocol). You can read MIB-2 objects using software such as SNMP manager software. This unit also supports the coldStart trap which occurs when the power is turned on or the unit restarts, and the Authentication failure trap, which informs of any illegal access using SNMP.

Using CGI commands, you can set the community name and access limitation, host to send traps, and some MIB-2 objects. To allow these settings, you need authentication by the camera administrator.

1. Inquiry Commands

You can check the SNMP Agent settings using the following CGI commands.

(Method) GET, POST
(Command)

http://ip_adr/snmpdconf/inquiry.cgi?inqjs=snmp
JavaScript parameter format

http://ip_adr/snmpdconf/inquiry.cgi?inqjs=snmp
standard format

With the above inquiry, you can obtain the following setting information. The following explains the setting information using the inqjs=snmp (JavaScript parameter) format.

```
var sysDescr="Model name" ... ①
var sysObjectID="1.3.6.1.4.1.122.8501" ... ②
var sysLocation="" ... ③
var sysContact="" ... ④
var sysName="" ... ⑤
var snmpEnableAuthenTraps="1" ... ⑥
var community="1,r,public,0.0.0.0,v2c" ... ⑦
var community="2,r,private,192.168.0.101,v2c" ... ⑧
var trap="1,public,192.168.0.101,v2c" ... ⑨
```

① Describes the case of “mib-2.system.sysDescr.0”. You cannot change this parameter.

② Describes the case of “mib-2.system.sysObjectID.0”. You cannot change this parameter.

③ Describes the case of “mib-2.system.sysLocation.0”. This field is used to describe information on the location of this camera. Nothing is set at the factory.

④ Describes the case of “mib-2.system.sysContact.0”. This field is used to describe information on the administrator of this camera. Nothing is set at the factory.

⑤ Describes the case of “mib-2.system.sysName.0”. This field is used to describe the administration node of this camera. Nothing is set at the factory.

⑥ Describes the case of “mib-2.snmpEnableAuthenTraps.0”. This example shows when “1” (enable) is set. In this setting, a trap occurs when there is an authentication failure. When “2” (disable) is set, no authentication failure trap occurs.

⑦ Describes the community attributes. This example shows the identification number “ID=1”, the community name “public”, and enables read from any IP address (0.0.0.0).

⑧ Describes the community attributes, similar to ⑦. This example shows the identification number ID=2, the community name “private”, and enables reading by SNMP request packet from the host “192.168.0.101”.

⑨ Describes the attributes to send a trap. This example shows the identification number “ID=1”, the community name “public”, and enables sending of traps to the host having the IP address “192.168.0.101”.

2. Setting Commands

The unit supports the following SNMP setting commands.

(Method) GET, POST
(Command)

http://ip_adr/snmpdconf/snmpdconf.cgi?
<parameter>=<value>&<parameter>=...&...

First, perform the settings of the following parameters.

1) sysLocation=<string>
   Set the case of “mib-2.system.sysLocation.0” in the <string> position. The maximum length of <string> is 255 characters.

2) sysContact=<string>
   Set the case of “mib-2.system.sysContact.0” in the <string> position. The maximum length of <string> is 255 characters.
3) sysName=<string>
   Set the case of “mib-2.system.sysName.0” in the
   <string> position. The maximum length of <string>
   is 255 characters.

4) enaAuthTraps=<value>
   Set the case value of “mib-2.snmp.snmp
   EnableAuthenTraps.0” in the <string> position.
   Type “1” (enable) or “2” (disable) in the <value>
   position.

5) community=<ID>,<communityName>,<IpAddressString>
   Set the community attributes. <ID> describes
   the setting identification number (1 to 8)
   <communityName> describes the community
   name to be set, and <IpAddressString> describes
   the IP address of the host you allow access (0.0.0.0
   for any host).
   Example: To allow reading by any host in the
   “private” community and having the ID
   number “2”.
   community=2,r,private,0.0.0.0

6) trap=<ID>,<communityName>,<IpAddressString>
   Set the attributes to send traps to. <ID> describes
   the setting identification number (1 to 8),
   <communityName> describes the community
   name to send traps to, and <IpAddressString>
   describes the IP address of the host to send traps to.
   Example: To specify the destination of traps as the
   public community and the ID number “1”.
   trap=1,public,192.168.0.101

7) delcommunity=<ID>
   This parameter is used to delete the previous
   community setting. <ID> describes the community
   setting identification number (1 to 8).

8) deltrap=<ID>
   This parameter is used to delete the previous setting
   of the host to send traps to. <ID> describes the trap
   setting identification number (1 to 8).

When you have finished changing the SNMP setting
information using the above parameters 1) to 8), check
the changed settings using an inquiry command. If the
changed settings are OK, restart the SNMP using the
following CGI command.

**SNMP restart command**

*Method*
GET, POST

*Command*
http://ip_adr/snmpdconf/snmpdconf.cgi?
   snmpd=restart

---

**Glossary**

**ActiveX control**
A component program object that can be used with web
pages or other application programs. The technology for
creating ActiveX control is part of software developed
by Microsoft.

**AES**
Abbreviation for Advanced Encryption Standard. This is
the next-generation standard of encryption, adopted by
the U.S. government.

**Bandwidth control**
To limit the amount of transmitted data.

**Bit rate**
The rate at which data bits are transmitted.

**CA (Certificate Authority)**
A private authority that issues and controls digital
certificates to be used for authentication regarding
network access.

**Capture**
To send audio and video converted to digital data from
video devices to a computer.

**Codec**
Software/hardware for coding/decoding video and audio
data.

**Common name**
A URL to be typed in the browser when you access a
website employing SSL (Secure Sockets Layer)
protocol with the security function. Access is successful
after the URL of the website is verified as matching the
server’s common name.

**Contrast**
The difference in tone between the lightest and darkest
portions of the image.

**Default gateway**
Device that can be used to access another network.
DHCP server
Acronym for Dynamic Host Configuration Protocol server. The IP address of a terminal without an individual IP address can be automatically distributed by the Dynamic Host Configuration Protocol (DHCP). The DHCP server assigns the IP addresses to the terminals.

Digital certificate
An electronic certificate that a CA (Certificate Authority) attests that a public key to cancel a secret code is issued by an authentic publisher.

Digital zoom
Zooming in/out function of an image without using an optical zooming function.

DNS server
Acronym for Domain Name System server. As an IP address required for connecting to the device on an IP network is numerical and difficult to remember, the Domain Name System was established. A domain name is alphabetic and is easier to remember. When a client computer uses a domain name to connect to another computer, it asks a DNS server to translate the name into the corresponding IP address. The client computer can then obtain the IP address of the computer to be connected.

EAP method
Acronym for Extensible Authentication Protocol. This is a protocol extended from PPP (Point-to-Point Protocol) and having an authentication function.

EAP-TLS authentication
TLS is an authentication protocol of the EAP methods using Transport Layer Security. By using digital certificates and other methods, EAP-TLS prevents data falsification, eavesdropping and spoofing.

Frame rate
The number of frames of a moving image that can be transmitted per a second.

FTP client
Software to be used for accessing the FTP server.

FTP server
A server to be used to transfer files via a network.

HTTP port
A port used to communicate between the web server and the web client, such as a web browser.

H.264
An image compression format. The standard written by the JVT (Joint Video Team) a joint organization for standardization (composed of ISO and ITU-T). H.264, is capable of transmitting video data at a higher compression rate than that of MPEG4.

IP address
Acronym for Internet Protocol Address. An individual IP address is basically assigned to each piece of equipment connected to the Internet.

JPEG
Acronym for Joint Photographic Expert Group. The still image compression technology or standards of ISO (International Organization for Standardization) and ITU-T. Popularly used as an image compression format on the Internet, etc.

MAC address
A network address that uniquely identifies each LAN card.

MPEG4
Acronym for Moving Picture Experts Group4. One of the MPEG standards for image compression format aiming to transmit images at a high compression rate with lower picture quality.

Multicast
The class D IP address assigned between 224.0.0.0 and 239.255.255.255. Using this IP address enables you to transmit the same data to multiple equipment.

Network address
The portion that identifies the local network (subnet) in an IP address.

Network bandwidth
Bit rate that can be used for networking.

NTP server
Network time server that transmits and receives time information over the networks.

Passive mode
The mode whereby a client FTP allows TCP connection for data transmission to the FTP server.

POP server
A server for storing incoming e-mail until you have read it.
Primary DNS server
One of the DNS servers that can first reply to a request by connected devices or other DNS servers.

Proxy server
A server or software that acts as an intermediary between a local network and the Internet so that it can connect to the Internet in place of a computer on a local network.

PSK
Abbreviation for Pre-Shared Key. This is a shared key to make an encryption key, used with TKIP in WPA encryption standard. PSK sometimes means an authentication system using a key previously shared.

QoS
Enter a value in the DSCP (Differential Service Code Point) field included in the IP header to control communication service quality.

RADIUS client
RADIUS (Remote Authentication Dial-in User Service) is an authentication and accounting protocol managing network access, and a RADIUS client is a party that accesses the network.
In Internet connecting service, a Network Access Server (NAS) such as that for dial-up and broadband access server is a RADIUS client. In a wireless LAN system, a wireless LAN access point is a RADIUS client.

Saturation
The degree to which a color is pure.

Secondary DNS Server
Subsidiary DNS server used when a primary DNS server cannot be used.

Shared secret
A character string to be used for mutual authentication between a RADIUS server and RADIUS client.

Sharpness
The degree to which the boundary of two portions is clearly distinguished.

SLOC
Abbreviation for Security Link over Coax. SLOC is a technology that enables analog composite video images and digital IP signals to be sent simultaneously using just one coaxial cable. It was developed by Intersil Corporation.

SMTP server
A server for sending or relaying e-mail messages between servers.

SNMP
A protocol for monitoring and managing network devices.

SSL
Acronym for Secure Sockets Layer. This is a protocol developed by Netscape Communications Corporation to be used for communications of encrypted data on the Internet.

Subnet mask
32-bit stream used to distinguish the subnet address from an IP address.

TCP
Acronym for Transmission Control Protocol. A standard protocol used for Internet connection. Compared with the other protocol, UDP, TCP provides reliable communication but communication speed is slower.

TKIP
Acronym for Temporal Key Integrity Protocol. This is used in WPA encryption for a wireless LAN. TKIP provides high security since it changes encryption keys based on PSK during on-going communication.

UDP
Acronym for User Datagram Protocol. A standard protocol used for Internet connection. Compared with the other protocol, TCP, UDP can transmit data faster, but reliable communication is not guaranteed.

Unicast
Transmission of data to specified equipment on a network by specifying a single address.

WPA
Acronym for Wi-Fi Protected Access. This is an encryption standard for a wireless LAN. It provides higher security than the conventional WEP (Wired Equivalent Privacy) standard. In WPA, TKIP is used for the encryption method, and PSK and EAP are used for the authentication protocol.

WPA2
Abbreviation for Wi-Fi Protected Access 2. WPA2 is a standard with which AES (Advanced Encryption Standard) is added to WPA.
802.1X
A standard that performs user authentication and dynamic key generation and traffic on a LAN.
