1 Safety

Warning!
Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

Caution!
Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

Notice!
Indicates a situation which, if not avoided, could result in damage to the equipment or environment, or data loss.

1.1 Important safety instructions

Video loss - Video loss is inherent to digital video recording; therefore, Bosch Security Systems cannot be held liable for any damage that results from missing video information. To minimize the risk of losing information, we recommend multiple, redundant recording systems, and a procedure to back up all analog and digital information.

Accessories - Do not place this unit on an unstable stand, tripod, bracket, or mount. The unit may fall, causing serious injury and/or serious damage to the unit. Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer. When a cart is used, use caution and care when moving the cart/apparatus combination to avoid injury from tip-over. Quick stops, excessive force, or uneven surfaces may cause the cart/unit combination to overturn. Mount the unit per the manufacturer's instructions.

Read, follow, and retain for future reference all of the following safety instructions. Heed all warnings on the unit and in the operating instructions before operating the unit.

1. Cleaning - Unplug the unit from the outlet before cleaning. Follow any instructions provided with the unit. Generally, using a dry cloth for cleaning is sufficient but a moist, fluff-free cloth or leather shammy may also be used. Do not use liquid cleaners or aerosol cleaners.

2. Heat Sources - Do not install the unit near any heat sources such as radiators, heaters, stoves, or other equipment (including amplifiers) that produce heat.

3. Ventilation - Any openings in the unit enclosure are provided for ventilation to prevent overheating and ensure reliable operation. Do not block or cover these openings. Do not place the unit in an enclosure unless proper ventilation is provided, or the manufacturer's instructions have been adhered to.

4. Water - Do not use this unit near water, for example near a bathtub, washbowl, sink, laundry basket, in a damp or wet basement, near a swimming pool, in an outdoor installation, or in any area classified as a wet location. To reduce the risk of fire or electrical shock, do not expose this unit to rain or moisture.
5. **Object and liquid entry** - Never push objects of any kind into this unit through openings as they may touch dangerous voltage points or short-out parts that could result in a fire or electrical shock. Never spill liquid of any kind on the unit. Do not place objects filled with liquids, such as vases or cups, on the unit.

6. **Lightning** - For added protection during a lightning storm, or when leaving this unit unattended and unused for long periods, unplug the unit from the wall outlet and disconnect the cable system. This will prevent damage to the unit from lightning and power line surges.

7. **Controls adjustment** - Adjust only those controls specified in the operating instructions. Improper adjustment of other controls may cause damage to the unit. Use of controls or adjustments, or performance of procedures other than those specified, may result in hazardous radiation exposure.

8. **Overloading** - Do not overload outlets and extension cords. This can cause fire or electrical shock.

9. **Power supply cord and plug protection** - Power supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords and plugs, convenience receptacles, and the point where they exit from the appliance.

10. **Power disconnect** - Units have power supplied to the unit whenever the power cord is inserted into the power source. The power cord plug is the main power disconnect device for switching off the voltage for the unit.

11. **Power sources** - Operate the unit only from the type of power source indicated on the label. Before proceeding, be sure to disconnect the power from the cable to be installed into the unit.

12. **Servicing** - Do not attempt to service this unit yourself. Opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

13. **Damage requiring service** - Unplug the power unit from the main AC power source and refer servicing to qualified service personnel when any damage to the equipment has occurred, such as:
   - the power supply cord or plug is damaged;
   - exposure to moisture, water, and/or inclement weather (rain, snow, etc.);
   - liquid has been spilled in or on the equipment;
   - an object has fallen into the unit;
   - unit has been dropped or the unit cabinet is damaged;
   - unit exhibits a distinct change in performance;
   - unit does not operate normally when the user correctly follows the operating instructions.

14. **Replacement parts** - Be sure the service technician uses replacement parts specified by the manufacturer, or that have the same characteristics as the original parts. Unauthorized substitutions could void the warranty and cause fire, electrical shock, or other hazards.

15. **Safety check** - Safety checks should be performed upon completion of service or repairs to the unit to ensure proper operating condition.

16. **Installation** - Install in accordance with the manufacturer's instructions and in accordance with applicable local codes.

17. **Attachments, changes or modifications** - Only use attachments/accessories specified by the manufacturer. Any change or modification of the equipment, not expressly approved by Bosch, could void the warranty or, in the case of an authorization agreement, authority to operate the equipment.
1.2 FCC and UL

FCC & ICES Information
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- reorient or relocate the receiving antenna;
- increase the separation between the equipment and receiver;
- connect the equipment into an outlet on a circuit different from that to which the receiver is connected;
- consult the dealer or an experienced radio/TV technician for help.

Intentional or unintentional modifications, not expressly approved by the party responsible for compliance, shall not be made. Any such modifications could void the user's authority to operate the equipment. If necessary, the user should consult the dealer or an experienced radio/television technician for corrective action.

The user may find the following booklet, prepared by the Federal Communications Commission, helpful: How to Identify and Resolve Radio-TV Interference Problems. This booklet is available from the U.S. Government Printing Office, Washington, DC 20402, Stock No. 004-000-00345-4.

UL Disclaimer
Underwriter Laboratories Inc. ("UL") has not tested the performance or reliability of the security or signaling aspects of this product. UL has only tested fire, shock and/or casualty hazards as outlined in Standard(s) for Safety for Information Technology Equipment, UL 60950-1. UL Certification does not cover the performance or reliability of the security or signaling aspects of this product.

UL MAKES NO REPRESENTATIONS, WARRANTIES, OR CERTIFICATIONS WHATSOEVER REGARDING THE PERFORMANCE OR RELIABILITY OF ANY SECURITY OR SIGNALING-RELATED FUNCTIONS OF THIS PRODUCT.
2 Short information

This manual has been compiled with great care and the information it contains has been thoroughly verified. The text was correct at the time of printing, however, the content can change without notice. Bosch Security Systems accepts no liability for damage resulting directly or indirectly from faults, incompleteness or discrepancies between this manual and the product described.

**Trademarks**

All hardware and software product names used in this document are likely to be registered trademarks and must be treated accordingly.

**More information**

For more information please contact the nearest Bosch Security Systems location or visit www.boschsecurity.com

![QR Code](http://www.boschsecurity.com/catalog_overview.htm)
3 System overview

The recorder can be connected to cameras that use the latest H264 high-resolution video technology and state-of-the-art compression techniques. These advanced technologies, coupled with efficient network data transmission, deliver the high security and reliability required for modern surveillance systems. Simultaneous remote or local monitoring, recording, archiving and playback are guided by simple menu selections and operator commands. The recorders can be installed with optional HDDs for video storage; plus a DVD burner for video export.
4 Installation

Notice!
Use proper surge suppression on cables that are routed outdoors, or close to large inductive loads or electrical mains supply cables.

Caution!
Installation should only be performed by qualified service personnel in accordance with the National Electrical Code (NEC 800 CEC Section 60) or applicable local codes.

To get the unit operational, perform the following quick install steps:
1. Carefully unpack the recorder from its shipping packaging – see Unpacking.
2. Make all required hardware connections – see ‘Make Connections’.
3. Power up the system – see Powering Up.
4. Log in – see Login.
5. Correctly configure your system software with the Startup wizard (this appears the first time the unit is started) – see Startup Wizard.

After completing this initial setup, the system is ready to run and will show a live view of the camera image(s). If required, you can alter the settings later using the menus and/or factory defaults, or you can run the Startup wizard again.

4.1 Unpacking

This equipment should be unpacked and handled with care. If an item appears to have been damaged in shipment, notify the shipper immediately.
Verify that all parts are included. If any items are missing, notify your Bosch Security Systems Sales or Customer Service Representative.
The original packaging is the safest container in which to transport the unit and can be used if returning the unit for service.

### 4.2 Make connections

**Notice!**
Use only PoE approved devices.

1. Connect the cameras to the VIDEO IN or connectors.
   - If using PoE connector, power is supplied to the camera via the Ethernet cable compliant with the Power-over-Ethernet standard.
   - Use an external switch to connect more cameras to a single RJ45 port.
2. Connect monitor A to the HDMI MON.A output, or the VGA MON.A output.
3. Connect the USB mouse to a USB port (back or front panel).

**Optional connections (depending on model)**
1. Connect a second dual monitor to the optional HDMI MON.B connector.
2. Connect up to 4 audio signals to the AUDIO IN RCA (CINCH) inputs.
3. Connect 1 microphone to the MIC IN RCA (CINCH) input.
4. Connect 1 RCA (CINCH) output from AUDIO OUT to the monitor or an audio amplifier.
5. Connect up to 16 alarm inputs to the ALARM IN connector (via the supplied terminal blocks) – see description in Hardware setup.
6. Connect up to 6 alarm outputs to the ALARM OUT connector (via the supplied terminal blocks) – see description in Hardware setup.
7. Connect a pan/tilt/zoom control unit to the RS-485 (only for hybrid models) – see description in Hardware setup.
8. Connect to your network via the RJ45 ETHERNET connector (use Shielded Twisted Pair Category 5e cable).
9. Connect extra video out cables to the VIDEO OUT ports if loop through is required to other devices (only for DIVAR 5000 hybrid).
10. Connect a Bosch Intuikey keyboard cable to the KEYBOARD connector using the supplied adaptor (only for DIVAR 5000) – see description in Hardware setup.
11. Connect an eSATA storage device to the eSATA connector (only for DIVAR 5000).
12. Connect the DIVAR to an approved ground point. Use the ground screw (supplied in the accessory bag) to attach a ground cable to the DIVAR back panel ground point.

### 4.2.8 Browser setup

Use a computer with an internet browser to receive live images, control the unit, and replay stored sequences. The unit can also be configured over the network using the browser.
4.3 Powering up

For units with an external power adapter
1. Switch on all equipment connected to unit.
2. Connect the DC power cord of the power adaptor to the 12 VDC connector on the unit.
3. Connect the AC power cord to the power adaptor.
4. Connect the power adaptor to an AC power outlet.
5. Turn on the unit power ON/OFF switch on the rear of the unit.

For units with 230 VAC input
1. Switch on all equipment connected to unit.
2. Connect the power cable to the unit.
3. Connect the power cable to the AC power outlet.
4. Turn on the unit power ON/OFF switch on the rear of the unit.

4.4 Startup wizard

The Startup Wizard opens automatically when you start your system for the first time. The wizard will guide you through five setup screens (use the buttons <Default>, <Cancel>, <Previous>, <Next> to enter values and navigate through the screens):

1. Screen 1
   Select your language.
   Click <Next>.
2. Screen 2
   Assign a User name and password.
   Optionally, assign a security question and answer (useful if you forget your password).
   Click <Next>.
3. Screen 3
   Enter the system time and date.
   If required, assign the daylight saving time (DST) fields.
   Click <Next>.
4. Screen 4
   Leave DHCP selected as default to automatically assign the external network details for the recorder (or) de-select DHCP and assign network details manually.
   Optionally scan the QR code to download the mobile app.
   Click <Next>.
5. Screen 5
   Click <Search> to search for any connected IP cameras (analog cameras connected to hybrid recorders and IP cameras connected to PoE ports will be automatically assigned).
   Select the required cameras in the Search list and add by clicking <Add> (or double click a camera). Selected cameras appear in the Device list (if required, Edit or Delete any connected cameras in the Device list).
   Click <Finished>.
6. Confirm the setup by clicking <Save>.

Notice!
Use <Cancel> to automatically install all factory defaults and exit the Startup wizard.
4.5 Login

Log in to your recorder by entering your user name and password, then click <OK>. Use the supplied USB mouse, front panel, remote control or keyboard to input data and commands.

4.6 Logout/Shutdown

Quick logout
Right-click the mouse to access the Quick menu; and choose the option Logout user.

Shutdown/Logout via Main menu
1. Right-click the mouse to access the Quick menu; from here choose the option Main menu.
2. Select the Shutdown option on the Main menu.
3. Use the menu to choose from the following options:
   - Shutdown
   - Logout (logout user)
   - Restart (Restart system)
4. Click <OK> to confirm the selection.

Shut down with power button
Another way to shut down the system is to press the power button on the front panel for at least 3 seconds (the system will automatically backup video recordings and settings).
Start up the system again (and access login screen) by briefly pressing the power button.
5 Hardware setup

This chapter contains detailed information about the hardware installation and connection of external equipment to the unit. The connector types and their pin signals are described. Most of the connectors are located at the rear panel of the unit. For convenience, one USB port is located on the front of the unit to connect a mouse or memory device.

All the input/output ports are Safety Extra Low Voltage (SELV) circuits. SELV circuits should only be connected to other SELV circuits.

5.1 Keyboard connection (only DIVAR 5000 models)

Use the keyboard connection on the back of the unit to connect a Bosch Intuikey keyboard using one of the following methods:
- use the supplied RJ11 adaptor – see Connect using RJ11 adapter
- strip the keyboard cable (or equivalent cable) to connect leads directly – see Connect wires directly

For short distances (up to 30 m), standard 6-core telecom flat cable can be used to supply signal connections for the keyboard (LTC 8558/00). Always use the Keyboard Extension Kit (LTC 8557) for distances over 30 m between the keyboard and the DVR; this kit provides junction boxes and cables. Maximum cable length: 30 m (using standard 6-core telecom flat cable), or 1.5 km (using Belden 8760 or equivalent).

The appropriate power supply (11 - 12.6 VDC, maximum 400 mA) to externally power the keyboard must be purchased separately.

5.1.1 Connect using RJ11 adapter

Connect the adapter as follows:
- red cable to the (-) of the keyboard control connector
- green cable connects to the (+) of the keyboard control connector
- white cable to ground
- blue cable to +12V
5.1.2 Connect wires directly

1. Cut off one of the connectors at the end of the cable.
2. Strip cable wires 1, 3, 4 and 6.
3. Attach the stripped wires to the keyboard connector on the back of the DVR according to the following figure.
4. Insert the attached cable connector into the DVR connector on the back of the keyboard.
5.2 RS485 port connection (only hybrid models)

Use the RS485 connector to connect Bosch, Pelco-P or Pelco-D controllable cameras to the unit for pan, tilt, and zoom control. RS485 is a single-direction protocol; the PTZ device can’t return any data to the unit.

Since RS485 is disabled by default for each camera, you must enable the PTZ settings as follows:

1. Connect a suitable cable to the RS485 connection on the DVR rear panel.
2. Connect the other end of the cable to the appropriate pins in the camera connector.
3. Follow the instructions in the Operation section of this manual to configure the camera for PTZ control.

The Bosch protocol is supported with the following baud settings:
- 9600 baud
- 8 data bits
- 1 stop bit
- no parity
- no flow control
**RS485 connector**

<table>
<thead>
<tr>

</tr>
<tr>
<td>GND</td>
<td>3</td>
<td>Shield</td>
</tr>
</tbody>
</table>

Max. signal voltage is -8 to +12 V. The recommended cable cross section is AWG 28-16 (0.08-1.5 mm²).

**5.3 RS232 port connections**

The RS232 port can be used to connect different devices:
- Console
- PTZ Matrix - a pan and tilt control unit (using RS232 to Biphase converter)

The device type and required settings can be assigned in the menu (**Settings > System > Serial Port**).

**Specifications**

- Connector type: 9-pole D-type male connector
- Maximum input voltage: ±25 V
- Communication protocol: Output signals according EIA/TIA-232-F

**Alarm I/O connections**

Alarm inputs and outputs are fitted as screw down terminal blocks on the unit. Cable cross section is AWG 26-16 (1.29 to 0.4 mm²).

6 Settings

6.1 System

Here you can choose from the following tabs General, Playback, Display, Serial port, Account and Service.

6.1.1 General

General

Language: Select here your desired language for the user interface (you will need to restart the system to display the user interface in the chosen language).

Device name: If required, assign here a unique identification name for this DVR.

Device no: Assign here an identification number (between 0 and 998) to be used by the remote control to control multiple DVRs.

Auto logout: Set here a time for automatic logout if a user is inactive for a period of time: 1 to 60 minutes (default is 10 minutes). If you choose ‘Never’, the user remains permanently logged on until logout or shutdown.

Export Type: Choose here the file type for exported files: DAV and/or ASF (default is both)

Show start-up wizard at next start-up: Select to force the user to assign settings requested by the Startup wizard after the next system restart.

Mouse sensitivity: Set here the mouse double-click speed required for selections.

Display logo: Activate or import a logo to appear automatically on the ‘System login’ and ‘Playback disclaimer’ screens. See below for how to import a logo.

Date & Time

System time: Click on the appropriate number to change it with the numeric keypad popup. The number format can be changed in the field below. The system is always started in default 24-hour mode. Select the correct GMT time zone. Click <Save> if you make any changes to the time.

Date format: Choose here between:
- YYYYMMDD (year month day) this is the default
- MMDDYYYY
- DDMMYYYY

Time format: Choose here between 12-hour and 24-hour.

Daylight saving time: Select checkbox to automatically set daylight saving in the DVR internal clock. Set the Start/End times for daylight saving by assigning the relevant times for the current year (assign ‘Month’; the ‘Week in the month’ and the ‘Day of the week’).

NTP: Select checkbox to automatically synchronize the recorder internal clock using Network Time Protocol. If required, assign the Server, Port (default is 123) and synchronization Interval (default is 60 minutes). Press <Manual update> to synchronize the time immediately.

IP camera time sync: Select checkbox to automatically synchronize the time in the IP cameras connected to the recorder. Assign a synchronize interval if required (default is 24 hours).

Logo import

The logo file must be:
- maximum 500 KB
- maximum 260 x 150 pixels
- 8 or 16 bits .BMP file format

Use the following steps to import a company logo:
1. Insert a USB stick (containing a company logo file) into the USB slot on the front of the DVR.
2. Choose the USB stick from the ‘Device name’ drop-down menu (a list normally appears on the bottom half of the screen showing the current folders and files available on the memory device; if no device is shown, press <Refresh>).
3. Browse through the available folders and files before clicking on the required logo file in the list.
4. Press <Import> to add the logo.
5. Right-click the mouse to return to the Display screen.
6. Press <Save> to complete import of the logo.

6.1.2 Playback

Instant playback: Assign here the playback time for the preview function: 5 to 60 minutes (default is 5 minutes).
Show filelist: Select to allow the possibility to display a file list on the Search/Play screen (default is no show).
Show timeline selection: Choose here to show the timeline buttons (All record, Normal, Alarm, Motion) on the bottom of the search/play screen (default is show).
Playback disclaimer: Activate or setup a warning disclaimer dialog box to appear automatically before you can search or playback video recordings (or enter the ‘Search/Play’ screen). If the disclaimer is activated (default is deactivated), you must always press <Accept> before you can continue with search or playback. See description below for how to set up the Disclaimer:
1. Press <Configure> to open the Disclaimer screen.
2. Enter the required text in the text box using the alphanumeric keypad.
3. Press <Save> to save the text.
Note 1: Use Default to clear the current disclaimer text and de-select the Enable disclaimer setting (no disclaimer appears).
Note 2: The Playback Disclaimer text is language dependent; i.e. disclaimer text saved for the English language setting will not display for the Spanish setting.

6.1.3 Display

Use the Display menu to setup the appearance of your screen.

GUI
Resolution: Choose from the options: 3840×2160@60fps, 3840×2160@30fps, 1920×1080, 1280×1024 (default), 1280×720, 1024×768. The system must reboot to activate a new setup.
Transparency: Adjust this value from 0 to 100% (default is 0).
Time display: Select to display time during playback and live/web viewing.
Channel display: Select to display channel name during playback and live/web viewing.
Hide event and status indicator for covert cameras

Sequence A
Enable sequence monitor A: Activate or access the Sequence Mon. A menu to activate and setup the tour function (sequence of camera views). The sequence will automatically start when the system is in live view. To stop and start a camera sequence on Monitor A, use the Sequence on/off option on the Quick menu (right-click mouse button) or click the sequence button on the remote control or front panel (DIVAR 5000 only)
The other selections are:
- Interval: This value ranges from 5 (default) to 120 seconds.
**Quick Config:** Choose here which view combinations are displayed (1, 4, 8, 9 and/or 16 windows) and which combination of cameras to use in the camera sequence. If required, use `<Add>`, `<Delete>`, `<Move up>` or `<Move down>` to add or delete views, or to adjust the order of view settings.

Note 1: Use **Default** to select all camera sequences for all possible view types (the Enable sequence will be deactivated, and the Interval will be reset to 5 seconds).

Note 2: An enabled alarm/event will override a sequence and briefly display the event before returning to the sequence.

**Sequence B**
Use the same procedure here to setup the live display sequence as used for Monitor A.

Note 1: The Search/Play function is not available on Monitor B.

Note 2: Monitor B can display a live multi-window view by enabling a multi-window sequence.

**MON adjust**
Adjust here the monitor output settings by dragging the slide bar for each item.

When ready, click `<OK>` to save changes and go back to the previous menu.

**6.1.4 Serial port**
Use the **Serial port** menu to configure the connections for a **Console** connected to the RS232 port, and an optional **Bosch keyboard (Intuikey series)** connected to the extra RS485 port (on DIVAR 5000 models). Configure the settings for **Console** or **Bosch keyboard** as described below.

**RS232 serial port**
- **Baud rate:** from 1200 to 115200 (default)
- **Data bit:** from 5 to 8 (default)
- **Stop bit:** 1 (default) or 2
- **Parity:** none/odd/even/space/mark (default is none)

Note: If the console connection to the RS232 port is not working, the RS232 port may already be selected for PTZ control – this is done in the **Camera > Configuration > PTZ** screen. If so, go first to this screen and reset the **Com connection** field to RS485.

**Bosch keyboard**
- **Baud rate:** from 1200 to 115200 (default is 19200)
- **Data bit:** from 5 to 8 (default)
- **Stop bit:** 1/2 (default is 1)
- **Parity:** none/odd/even/space/mark (default is none)

**Keyboard address:** (default is 1) One Intuikey keyboard can communicate with a maximum 16 DIVARs. If assigning multiple DIVARs to a keyboard, Set the **Keyboard address** for every DIVAR.

**First camera offset:** (default is 1) Set this offset for every DIVAR. Camera 1 of the DIVAR will be called on the keyboard by selecting the programmed ‘**First camera offset**’ number. For example, set the offset to 101 so when you select 101, camera 1 is displayed in full screen on monitor A of that selected DIVAR. Press 112 to display camera 12 in full screen.

Press `<Save>` to enter changes and go back to the previous menu.

**6.1.5 Account**
This screen lists all of the user levels available for this recorder.

The operating functions available to each user level can be individually set and limited by setting passwords (max. 12 characters) for user levels at the log in screen. See following table for the default user levels and available functions (a user cannot change their own available functions).
Use **<Add user>** to add a user and assign their system authority as follows:

1. Enter a **User name** up to 16 characters.
2. Enter a **Password** up to 12 characters, and **confirm** this by entering the password again.
3. If required, enter a security question and answer to help prompt the password if you forget it later.
4. For quick configuration of a user group, select one of the selections from the ‘**Quick Config**’ pull-down menu (Administrator, Advanced, User, default); the normal authorities are automatically assigned for that user type. Otherwise, manually select the authority fields required for the new user type for all tabs (System, Live, Playback).
5. Select **<Save>** when done.

Use **<Move up>** and **<Move down>** to change the order in which the users appear in the ‘Accounts’

Modify a user as follows:

1. Choose the **User name** from the drop-down list.
2. If required, assign the user to a different **Group** by selecting from the drop down list.
3. Change the user authority by (de)selecting the check boxes.
4. Click **<Save>**.

Delete a user as follows:

1. Choose the **User name** from the drop-down list.
2. Click **<Delete>**.
3. Confirm the delete by clicking **<Yes>**.

**Change a password**

1. Select the relevant user.
2. Enter the **Old password**.
3. Enter the **New password**.

<table>

</tbody>
</table>
4. Enter the New password again in the **Confirm** field.
5. Click **Save** to save the new password setting.

**Notice!**
Bosch strongly recommends to enforce a strict password policy by using strong unique passwords with at least 8 characters including combinations of numbers and special characters.

### 6.1.6 Service

**Upgrade**
Here you can do the following:
- View the current firmware version of your installed system
- Check the Bosch download store if new versions are available
- Upgrade to a new version if required.

You can update the current system as follows:
1. Insert a USB stick with a preloaded update file (must be called **xxx.bin**).
2. Click **Upgrade**.
4. Click **Start** to begin the update.
5. Wait until the update is complete and the system is restarted.

**Notice!**
Bosch strongly recommends upgrading to the latest firmware for the best possible functionality, compatibility, performance and security.

Check [http://downloadstore.boschsecurity.com/](http://downloadstore.boschsecurity.com/) regularly to see if there is a new firmware version available.

**Config**
Here you can import or export (backup) configuration settings from one recorder to another.

Use this function as follows:

**Import**
1. Choose first a memory device from the drop-down menu (a list normally appears of previously saved system settings available on the device).
2. Select the required config files from the list.
3. Click **Import** to load the files.
4. **Export**
5. Choose the device to export to.
6. Check there is sufficient space on the device.
7. Use the selection buttons (on the bottom of the screen) for your configuration backup:
   - **New folder** will create a new folder on the selected memory device
   - **Format** will ask to confirm a format of the selected memory device.
   - **Import configuration**
   - **Export configuration** saves a copy of the system settings to a selected memory device
Default

Notice!
User settings and recordings will be lost
The system menu display, language, time display mode, video format, IP address and recordings will all lose their user defined setup after the factory defaults are restored.

To restore the unit to its factory default:
1. Select the check box for the settings you wish to return to the factory default.
2. Click <Reset> to reset the chosen defaults (you may need to enter a Password to confirm the restore).
6.2 Network

6.2.1 Connection

Four extra tabs are available (External, Internal, Port, Streaming).

External

Input here the following network information:

- **MTU**: Maximum transmission unit in bytes unit for used ports (default is 1500).
- **IP version**: IPv4 (default) or IPv6. This is the IP address access format.
- **DHCP (only for IPv4 option)**: Select this to automatically search for IP details. If this field is enabled, you cannot modify IP / Subnet mask / Gateway and these values are displayed as zero (if PPPoE is operating, you also cannot modify IP/Subnet mask /Gateway). To view the current IP information, you first need to disable the DHCP function.
- **Link address (only for IPv6 option)**: Network address that is valid only for communications within the network segment (link) or the broadcast domain that the host is connected to.
- **IP address**: Enter here your IP address. (For the IPv6 version, default gateway, preferred DNS and alternate DNS, the default value shall be 64-digit).
- **Subnet mask (only for IPv4 option)**: Enter here your subnet mask address
- **Default gateway**: If required, enter here the default gateway address.

Important

The system needs to check the validity of all IPv6 addresses. The IP address and the default gateway must be the same in each IP section (i.e. the specified length of the subnet prefix must have the same string).

- The maximum number of connections is 64, however more than 4 remote connections can cause performance limitations. Bosch strongly advises not using more than 4 simultaneous connections.

- **Preferred DNS**: if required, enter here the preferred DNS server IP address.
- **Alternate DNS**: if required, enter here an alternative DNS server address.

When ready, click <Save> to enter values and go back to the previous menu.

Internal

Choose here the settings for an internal network (DHCP or as a DHCP switch)

- **IP address**: Enter here your IP address. (For the IPv6 version, default gateway, preferred DNS and alternate DNS, the default value shall be 64-digit).
- **Subnet mask**: (only for IPv4 option): Enter here your subnet mask address
- **Default gateway**: If required, enter here the default gateway address.

Port

- **TCP port**: Default is 37777.
- **UDP port**: Default is 37778.
- **HTTP port**: Default is 80.
- **HTTPS port**: Default is 443.
- **RTSP port**: (Default is 554). When setting up RTSP streaming, use the following URL format: rtsp://<username>:<password>@<ip>:<port>/cam/realmonitor?channel=<channelNo>&subtype=<typeNo>

  e.g.: rtsp://ADMINISTRATOR:000000@10.120.19.60/cam/realmonitor?channel=1&subtype=0

  username = username
  password = password
  port = default is 554 (this is optional)
  channel = channel number 1..16
  subtype = 0 or 1 (1st or 2nd stream)
**Important:** The system always needs to reboot if any of the above ports are changed. Make sure the port values here do not conflict.

**Streaming**

Choose your preferred **Live Video Stream Buffering:**

- Realtime
- Balanced
- Network optimized
- Custom - set here your preferred streaming speed (default is 500 ms)

### 6.2.2 DDNS

Use the following steps to configure DDNS:

1. Select the 'DDNS enable' box.
2. Select a DDNS provider from the drop-down menu. The providers supported are: Bosch free DDNS, NO-IP DDNS and Dyndns DDNS. All DDNS types can be valid at the same time; you only need to select the required type from the drop-down menu.
3. Complete the details for the Domain as assigned by the provider. Also enter your email address.
4. Select the 'I agree to ... ' boxes.
5. Click <Save> and then reboot the system.

After rebooting, you must confirm your DDNS registration by replying to the email sent to you. Now you can open the DDNS Server web search page.

### 6.2.3 Mobile

Use this page to scan the relevant QR codes for downloading the IOS or Android apps for operating your DVR. Once the app is downloaded, scan the relevant QR code to add a Local or Public device (and DDNS name).

### 6.2.4 UPnP

This protocol enables a mapping relationship between the LAN and the WAN:

- Enable or disable the UPnP function on this device
- Status – Can be Disable, Success, Searching or Unknown (when the system is offline)
- Router LAN IP
- Router WAN IP

The bottom table shows the PAT (port mapping list) with a one-to-one relationship with the router port mapping setting:

1. Double-click a port to change a setting
2. Click <OK> when ready.

### 6.2.5 PPPoE

Enable or disable the PPPoE feature.

Enter your PPPoE 'User name', 'Password' and IP address supplied by your internet service provider, and click <Apply>.

You will need to restart your system to automatically connect to the internet (the IP address will be automatically assigned).

### 6.2.6 SNMP

SNMP (Simple Network Management Protocol) provides the basic network management frame of the network management system, and can be used to retrieve basic system health information. It can also be used to configure the system to send out traps for events such as system reboot, video loss, hard disk errors, etc.
The SNMP files can be retrieved/received on devices using common tools such as MG-SOFT MIB Browser. The Management Information Base (MIB) can be downloaded via the Web.

Use the following steps to configure SNMP:
1. Select the 'SNMP enable' box.
2. Use the defaults for ‘SNMP port’, ‘Read community’, ‘Write community’, or assign your settings if required.
3. To set up traps, press <Add> and enter IP addresses and ports of the devices that should receive the trap notification. Press <Delete> to delete a device from the list.
4. Use the defaults or assign settings for ‘Video loss’ events sent to the trap:
   - Single mode (set a time limit for detecting a single video loss to generate the trap)
   - Multi mode (set the number of video losses which should occur within a set time to generate the trap)

6.2.7 Email
Use this screen for the email settings (address, sender, etc.) if you have enabled the field ‘Send email’ in the menus Alarm, Detect and System events.
See the following descriptions for the field settings in this screen:

SMTP Server
Set to the mail server that processes outgoing e-mail for your network. This can be either an IP address or a Fully Qualified Domain Name (ex. 10.0.0.1 or smtp.example.com)

SMTP Port Number
This is the port the mail server receives e-mail on. The internet standard for e-mail is port 25, but some servers use different ports to protect against being used to transmit bulk, unsolicited e-mail.

Anonymous
Select this option to hide the sender details.

User name and Password
If authentication is required, regardless of encryption, enter the User name and Password provided by your administrator in each field respectively.

Receiver
Enter up to three e-mail addresses that outgoing e-mail should be sent to.

Sender
This is the e-mail address that will appear as the sender of all e-mail originating from the unit.

Subject
This is the subject that will appear in all e-mail sent by the unit.

Encrypt type
Some mail servers require encryption to transmit e-mail. If required, use SSL or TLS encryption when sending e-mail. If not required, select ‘NONE’.

Attachment
Check this box to allow an attachment to email.

Health status update
Check this box to command the system to send out a test email to check the connection is OK. This will be done at the regular interval set in the Hour field. A dialog box will appear to display if the connection is OK or not.
Another option is to click <Test> to manually check the email connection.

6.2.8 Storage
Please first boot up the corresponding FTP server before activating this menu.
Select the File format, type and location. Then assign a schedule (weekday, start time, last number of days, time period and channel) to activate the storage.

See also
– Recording, page 38

6.2.9 IP filter
The system supports IPv4 and IPv6 address format.
Choose for access to ‘Trusted’ or ‘Blocked’ sites IP addresses. If you disable this function, all IP addresses can access the current DVR.
Enable or disable the feature and then use <Add> to select IP address, IP section and MAC address. Press <OK> to confirm.
6.3 Camera

6.3.1 Detection
This screen shows a list of cameras connected to the DIVAR, IP and/or analog (see Device list). If required, cameras can also be added automatically with <Device search> or manually with <Manual add>. Do this as follows:
1. Click <Device Search> to search for any newly connected cameras (analog cameras connected to hybrid recorders and IP cameras connected to PoE ports are already automatically shown).
2. Select the required cameras in the Search list and add to Device list by clicking <Add> (or double click a camera).
3. Selected cameras appear in the Device list (if required, Modify or Delete a camera by selecting the appropriate function).

6.3.2 Configuration
General
Assign here for each channel the camera identification fields.
Overlay
Cover area: Select to set a privacy mask (concealed area) on the display.
To set the mask area:
1. Select the required masks from the selection [1], [2], [3], [4].
2. Press <Set> and use the mouse to drag a mask over the area to be concealed. Enlarge or shrink the mask as required.
3. Select and drag a new area as required (system supports max 4 masks per channel).

PTZ
The pan/tilt/zoom setup includes the following items.
– Channel - select first the applicable channel (these settings can later be copied to other channels using <Copy>.
– PTZ type: Choose Remote or none.
After completing setup, click <Save> to go back to the previous menu.
For a detailed description of how the PTZ is operated, please refer to PTZ.
The Copy function allows you to quickly copy one channel setup to more channels (or all channels). This obviously saves repeating common settings for each channel. The channel setups that can be copied are:
– Schedule
– encoder
– Alarm
– Detect
– Pan/Tilt/Zoom
For example:
1. After setting values in the “Encoder” or “Schedule” screen for channel 1, click <Copy> to go to the Copy screen.
2. Check the currently copied channel name is highlighted (for example, channel 1).
3. Now select the channel(s) to paste to, e.g. channel 5, 6 and 7. (If you want to save the current setup of channel 1 to all channels, click the box All.)
4. Click <OK> to save the copied setup.
5. Click <OK> in the Encoder or Schedule screen to complete the copy function.
6.3.3 **Recording**

Enter here the relevant settings for each connected channel. In most cases you can encode 2 streams for each connected channel. If required, use the **Default** button to reset all encode fields to the factory default. Use the **Copy** button to copy identical settings from one channel to other channel(s).

Encode settings are:

- **Channel**: Select a connected channel (default is 1)
- **Type**: Select from Regular/Motion/Alarm (default is Regular)
- **Resolution**: System
  - Stream 1
  - Stream 2
- **Frame rate (per second)**:
- **Bit rate in Kb/second** (this will depend on the setting for **Resolution** above):
6.4 Alarm

Use the Alarm menu to specify the desired behavior for a Motion detect, Video loss, Input alarm, System alarm, or Alarm out; also define how alarms are acknowledged.

6.4.1 Motion detect

Here you can set events that can be used to trigger motion detection alarms. If required, use the <Default> button to reset all detect fields to the factory default.

See the following descriptions for the full list of settings:

**Channel:** Select the channel(s) to activate the recording function when a motion detection alarm occurs (make sure you have selected “Motion” in Main Menu > Setting > Schedule).

**Enable:** Select to enable motion detection

**Motion configured by:** Assign here if camera Camera (Default) or Recorder software is used for motion detection.

**Region:** Click <Set> for a new interface screen where you can assign a motion detection zone (only possible if Recorder software is selected for detection - see above). This screen shows a matrix of small rectangular zones on the screen. The normal default when you open this screen for each camera channel is that the complete screen is colored and ‘armed’ (activated for motion detection). A black (or dark) area signals a disarmed zone. Set detection region(s) as follows:

1. Left-click the mouse and drag it over a region where you want to disable (disarm) motion detection. Notice that the selected zones become dark.
2. Release the mouse button when you have selected a complete area to be disabled for motion detection.
3. Now repeat this action for other areas on the screen to be disabled. If you want to ‘rearm’ a disabled area again, or you make a mistake, simply select the region again with the left-mouse button (the region will be colored again).
4. After setting all the motion detection zones for a channel, return to the ‘Detect’ screen by right-clicking the mouse (or click the ‘Enter’ button). If you click the ESC button to exit the region setup screen, the zone setup will not be saved.
5. Always remember to click <Save> on the ‘Motion Detect’ screen to save the current setup.

**Period:** Click <Set> for a new interface screen where you can organize time periods for detect activation as follows:

1. Select the check box on the left for the day where you require detection (or ‘All’ for all days).
2. If you do not require motion detection for the whole day, hold down the left mouse button and drag it over segments of the time bar to assign begin and end times for deactivating motion detection (the default is a colored bar for 24-hour detection). Use the <Set> button to assign precise deactivate times if required.
3. When you have correctly assigned a day, continue with the next day. If the time periods are the same as the first day, then a quick way to do this is:
   - click <Set> for the time bar to copy
   - Under the ‘Copy’ line, select each of the days that have a similar setup (checkbox is ticked) and click <Save>. Use ‘All’ to select all days.
   - the same time periods for the first day now apply to all selected days
4. If you wish to assign active time(s) for a work day or a free day (holiday) that are the same for each work day or free day, do this as follows:
   - choose either Work day or Free day from the drop down menu and press <Setup> – a new screen appears:
- Select here the days you want to assign as free days or work days and click <Save>
- Now assign the active time periods for the work day or free day – these same time periods will be copied to all the assigned work days or free days
5. When ready, click <OK> to return to the Alarm or Detect screen. Do not forget to click <Save> here to save your settings.

**De-bounce time:** Set here a timer for how long the detect alert should stay active after it is first activated (default is 5 seconds). During this time, the system will activate the alarm display, alarm output, tour, PTZ, snapshot, channel recording and buzzer (if they are all selected). An alarm upload and email will also be sent (if selected). If a new alarm is detected within the De-bounce time, the timer will be reset for the alarm display, alarm output, tour, PTZ, snapshot, channel recording and buzzer (no new alarm upload or email are sent).

**Alarm out:** If an alarm occurred, the system will enable a peripheral alarm device connected to the selected outputs (default is 1).

**Latch:** When the ‘De-bounce time’ is ended, the alarm output relay you selected in ‘Alarm out’ will remain activated for this extra ‘latch’ period (from 1 to 300 seconds - default is 10). The latch is still valid even if you manually disable the alarm event.

**PTZ activation:** Here you can set PTZ movement when an alarm occurs. See below.

**Delay:** Set here an extra timer for channel recording to remain active (from 10 to 300 seconds - default is 10) after the ‘De-bounce time’ has elapsed.

**Display Mon. A:** Here you can enable a tour function (a sequence of camera views) when an alarm occurs. The system supports only one-window tour for alarms. See **System > Display > Sequence** for how to pre-select the tour sequence and interval. Choose also which channels to display in the tour sequence.

**Display Mon. B:** Select both check boxes here to enable a tour function on Monitor B when there is an alarm signal. Choose also which channels to display in the tour sequence.

**Send email:** An alert email is sent if an alarm is detected.

**Show message:** The system will pop up a message in the local host screen to alert you.

**Buzzer:** Select here to activate the buzzer when an alarm occurs.

After completing setup, click <Save> to save your settings and go back to the previous menu.

**Note**
In the Detect menu, the **Copy** function is only valid for the same event type, which means you cannot copy a channel setup in video loss mode to camera masking mode.

**PTZ Set**
Setup the PTZ as follows for each camera associated with the input:

1. Click on the drop-down menu to set the activation operation for:
   - None (default)
   - Shot – this will swivel the channel camera to a preset PTZ position this is setup in the **Camera > Configuration > PTZ** submenu
   - Tour – this will switch the channel views in a preset sequence
   - Pattern – this will swivel the camera in a pre-assigned pattern
2. Click on the next field to enter a pre-position number from 0 (default) to 255 to send the camera to a specified pre-position.
3. Repeat these steps for each of the PTZ cameras that require a preset.

If required, access the Pan/Tilt/Zoom menu (**Main menu > Setting > Pan/Tilt/Zoom**) to setup the video channel, baud rate, dome protocol, etc.

**6.4.2 Video loss**
See **Alarm > Motion detect** for a description of applicable fields.
6.4.3 Input alarm
See Alarm > Motion detect for a description of applicable fields.

6.4.4 System alarm
Use tabs in this menu to setup how the system reacts to different system alarms (HDD, Network, Temperature, Other).

HDD
- **Enable**: select to enable the system event chosen in the following field.
- **Event type**: choose from
  - Disk full
  - No HDD
  - Disk error
- **Alarm out**: select the alarm activation output port(s) (maximum of 3 on DIVAR 2000/3000; 6 on DIVAR 5000).
- **Latch**: set a delay time (from 10 seconds (default) to 300 seconds) before the system automatically turns off the alarm and the activated output after the external alarm is cancelled.
- **Send email**: system will send an email to alert you when an alarm occurs.
- **Show message**: system will pop up a message on the local screen to alert you when an alarm occurs.
- **Buzzer**: the buzzer alerts you when an alarm occurs.
- **Alarm when disk is full for xx %**: (this option is only shown for the event 'Disk full'; default is 80%).

Network
- **Enable**: select to enable the system event chosen in the following field.
- **Event type**: choose from
  - Network lost (disconnected)
  - IP conflict

See above for a description of other fields.

Temperature
**Enable**: select to react to a temperature alarm.
See above for a description of other fields.

Other
**Enable**: select to react to other alarms (e.g. battery error).
See above for a description of other fields.

6.4.5 Alarm Out
Assign here the settings for each of the available alarm outputs or use the ‘All’ checkbox to select all outputs:
- **Automatic control**: Set the alarm to react to an automatic input.
- **Activate manually**: Set the alarm to react to a manual input.
- **Deactivate manually**: Turn off the alarm outputs for schedule and manual.
- **Alarm status**: displays the current status of the external alarm (a checked box means the alarm is activated)
- **Deactivate alarms**: Click this button to turn off the alarm settings.
6.5 Schedule

Here you can plan and set up schedules for efficient use of the channels while effectively covering most recording needs. You can also assign holiday intervals.

6.5.1 Weekdays and Holidays

Weekdays

Recording is scheduled in a weekly calendar, with the possibility to change the behavior of each day for a maximum six different time periods (this is useful for weekends or nights). This calendar is then repeated for subsequent weeks.

Different recording modes can be assigned

- Regular
- Motion (Motion Detection)
- Alarm

If you choose combined options, the system will not separately record if an MD or an alarm occurs simultaneously.

Each record mode changes the quality and frame rate settings according to their settings in the menu Setting > Camera > Recorder. A mode is specified in intervals of 1 hour for each day of the week.

When scheduled times are assigned, the record modes are graphically shown as color bands on the bottom of the screen over the selected 24-hour period:

- green for regular recording
- yellow for Motion
- red for alarm recording

Edit a schedule

1. Select the required channel number (select “all” if you want to schedule all the channels).
2. If required, choose Pre record to start the video recording a few seconds before the event occurred in the file (from 1 to 30 seconds depending on the bit stream).
3. If required, choose Snapshot to take a snapshot of the image when an alarm occurs (see Recording, page 38 for more information on setting up the snapshot).
4. Choose Period - Monday to Sunday, or all (if the same period is required for each weekday).
5. Enter the times required for different periods (maximum six) for different modes.
6. Assign the mode for each different time period - choose Regular, MD, Alarm and/or MD & alarm.
7. If holiday(s) need to be added to the schedule, choose Holiday:

After completing the setup, click <OK> to save the settings and return to the previous menu.

Holidays

Use this tab to add holiday periods to the schedules:

1. Select the required channel number (select “all” if you want to schedule all the channels).
2. If required, choose Pre record to start the video recording a few seconds before the event occurred.
3. Choose the record mode for the holiday period (Regular, Motion, Alarm).
4. Click <Add> to open a calendar for holiday periods.
5. Click on the required holiday periods (choose other months and years if required).
6. Select each Repeat steps 5 and 6 to assign the holiday settings.
6.6 Storage

6.6.1 HDD manage
Here you can view and manage the HDD(s) installed in your DVR:
- **SATA**: shows the current selected hard disk where the system will continuously record, overwriting the oldest unprotected video on the hard disk with newer video. When an HDD is working properly, it is shown as O; if an HDD error has occurred, it is shown as X.
- **E-SATA (only available on the DIVAR 5000)**: shows the current selected hard disk where the system will continuously record. If required, press the **ESATA** button to access a new status screen where you can detect ESATA connections.
- The various buttons on this screen are described below:
  - **Slot.**: Select a HDD from the dropdown list to manage its settings – see below.
  - **Mode**: Select an HDD mode from the dropdown list:
    - Read/Write
    - Read-only
  - **Format**: format all data on the HDD – here you will need to enter your password to confirm the format process

---

Notice!
System reboot required
You must reboot the system to activate any modifications

The bottom half of the screen shows the current HDD type, status, capacity and the recording time(s).

6.6.2 Recording
Here you can manage the storage of recordings:
**HDD full**: assign here what to do when the HDD is full
- Overwrite old recordings starting with the oldest (default)
- Stop recording

**Auto delete old files**: assign what to do with old files on the storage device
- Overwrite old recordings starting with the oldest (default)
- Stop recording

**Main stream recording**: assign here how to record the main stream on each individual channel
- Schedule - record according to the scheduled times set in the tab **Schedule**
- Forced on - record continuously
- Off - do not record

**Sub stream recording**: assign here how to record the sub stream on each individual channel
- Schedule - record according to the scheduled times set in the tab **Schedule**
- Forced on - record continuously
- Off - do not record
7 Operation

7.1 User controls and menus

The following user controls are available:
- Mouse – (the preferred input device when setting up the system and entering field values)
- Front panel
- Remote control
- Remotely via the Web-based Configuration application
- Connected keyboard (only on DIVAR 5000) – see relevant keyboard manual

The DIVAR uses the **Main menu** and **Quick menu** to perform all operating steps and give access to several functions to help configure and use the unit.

Note: Some menu options are only accessible with an Administrator login.

7.1.1 Mouse Controls

<table>
<thead>
<tr>
<th>Mouse</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left button</td>
<td>In <strong>Live</strong> mode, click once to select channel and choose other functions</td>
</tr>
<tr>
<td></td>
<td>In the <strong>Quick menu</strong>, use the left mouse button to enter a menu item (left-click again to make selections in menu)</td>
</tr>
<tr>
<td></td>
<td>When inputting data, one of the following input keypads appears (depending on whether you need to enter alphanumeric or only numeric characters):</td>
</tr>
<tr>
<td></td>
<td><img src="image" alt="Alphanumeric Keypad" /> <img src="image" alt="Numeric Keypad" /></td>
</tr>
<tr>
<td></td>
<td>Left click the corresponding button on the keypad to input the required characters (use Shift on alphanumeric keypad to switch between small/capitalized)</td>
</tr>
<tr>
<td>Double-click left button</td>

<td>In normal playback or pause mode, click to reverse playback</td>
</tr>
</tbody>
</table>

In PTZ mode, use to control the tilt functions of the selected camera
In text mode or when choosing a camera channel, input number 3 or 9 (only on the DIVAR 2000/3000)
In PTZ mode, use to control the pan function of the selected camera
In playback, click to control playback bar
In text mode or when choosing a camera channel, input number 6 or 7 (only on DIVAR 2000/3000)
In playback, click to restore real-time monitor mode

Select a submenu or menu item, or confirm selections made in menus
Go to default button
Go to Quick menu

Click to switch between one-window and multiple-window (2, 4, 9, and 16)

In one-window monitor mode, click to display assistant function: PTZ control and image color
In motion detection setup, use the Fn and direction keys for setup
In text mode, click to switch between numeral, English character (small/capitalized), etc. Press for 1.5 seconds to delete the previous character before the cursor
Realize other special functions

Multiple slow play speeds or normal playback
In text mode or when choosing a camera channel, input number 5 (only on DIVAR 2000/3000)
Various fast speeds and normal playback
In text mode or when choosing a camera channel, input number 4 (only on DIVAR 2000/3000)
In playback mode, playback the previous video
In text mode or when choosing a camera channel, input number 7 (only on DIVAR 2000/3000)
In normal playback or pause mode, click to reverse playback
In reverse playback, click to pause playback
In text mode or when choosing a camera channel, input number 1 (only on DIVAR AN 3000)
Play Next

In playback mode, playback the next video
In menu setup, scroll down the dropdown list
In text mode or when choosing a camera channel, input number 8 (only on DIVAR 2000/3000)

Play/Pause

In normal playback, click to pause playback
In pause mode, click to resume playback
In text mode or when choosing a camera channel, input number 2 (only on DIVAR 2000/3000)

The DIVAR 5000 also has the following buttons

Export

Export the currently selected files to an external device

Sequence

Activate the camera views in a pre-set sequence

Numeric keypad

Switch camera channels
In text mode, enter characters in a field (use the Shift button to change the input mode)

The front panels also have the following status lights and a USB connector:

<table>
<thead>
<tr>
<th>Status lights</th>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Channel record</td>
<td><img src="symbol" alt="1-16" /></td>
<td>A channel number is lit if the channel is recording. For 32-channel units, press &lt;Shift&gt; and hold in for 5 seconds to show recording status of channels 17 to 32. Release &lt;Shift&gt; again to return recording status view of channels 1 to 16. This function only works in ‘Live’ mode, with no menus open.</td>
</tr>
<tr>
<td>Hard disk</td>
<td><img src="symbol" alt="disk" /></td>
<td>Is lit if an installed hard disk has an error or is full.</td>
</tr>
<tr>

<td><img src="symbol" alt="network" /></td>
<td>Is lit if a user is connected to the DVR online.</td>
</tr>
<tr>
<td>USB port</td>
<td><img src="symbol" alt="usb" /></td>
<td>Connect USB storage device or USB mouse to this port.</td>
</tr>
</tbody>
</table>

7.1.3 Remote control

All functions controlled by the front panel and USB mouse can, alternatively, be accessed using the supplied remote control.

The IR remote control allows control of up to 999 units without interfering with one another. An ID number must be chosen on the remote control and in the system (see menu Setting > General for setting a system ID for each unit).
To set the ID on the remote control:
1. Press the Add button on the remote control.
2. Press a number between 0 and 998 that corresponds to the unit ID you wish to control (this unit will remain as the default until you select another unit with the Add button).
3. Press the Enter button to set the unit ID.
See the following table for detailed information on each of the remote control buttons.

<table>

</table>
7.1.4 Quick menu

When in live viewing mode, right-click the mouse for the Quick menu. Options here are:

- **View 1, 4, 8, 9, 16, 32** – choose here the number of view windows shown on Monitor A (one-window, four-windows, nine-windows, 16-windows or 32-windows). For each window view, select also which channels (cameras) to display

- **View monitor B** (optional) – a popup appears where you can assign the view windows and channels for images to be shown on monitor B

- **Pan/Tilt/Zoom** – only possible if you have a PTZ camera attached and configured

- **Playback** – search for records, and play/export them

- **Event search** – search for events (alarms), and play/export them

- **Snapshot** – make a snapshot of the current live camera images:
  - A disclaimer screen may initially appear when you select Snapshot (click <Accept> to continue).
  - Choose to export the snapshot to an email address, a USB memory device, and/or a DVD.

- **Sequence on** – activate a camera tour sequence on Monitor A (to disable the sequence, access Quick Menu again and select ‘Sequence off’)

- **Alarm output** – access the alarm output screen to configure the alarm output relays

- **Logout user** – logout the current user (a popup appears to confirm logout)

- **Main menu** – for settings and user modes

---

**Notice!**
The Pan/Tilt/Zoom setting applies for the currently selected channel. If you are in multiple-window mode, the system automatically switches to the corresponding channel.

7.1.5 Main menu

Access the Main menu as follows:

- Use the Enter key and the direction buttons on the front panel or the remote control
- Right-click the mouse for the quick menu and select 'Main menu'

Here you can select the following sub-menus:

- **Playback** to play recordings
- **Event search** to search for events/alarms over a set period (all events can be previewed, played and exported as required)
- **Export** to export your recorded files to a memory device
- **Setting** for system configuration
- **Info** for relevant system status information
- **Shutdown** - shutdown or restart your system, plus logout

7.2 Live screen

The units have a maximum possibility for three monitor outputs (depending on available connectors on the rear of the unit):

- two for monitor A
- one for monitor B

Refer to the descriptions below, and to menu Setting > System > Display, to see how to configure the monitor displays.
7.2.1 Live mode

Once the Startup Wizard is completed, your monitor will show the live viewing mode with 1 to 32 real-time images on the display (from a maximum 32 connected cameras). The system date and time is displayed in the top right corner of the screen, and the channel ID is shown in the bottom left of each channel display.

From here, use the mouse (or front panel buttons, or remote control) to control your system via on-screen icons and the Quick menu (accessible by right-clicking the mouse). Make any required configuration changes via the Main menu (last selection on Quick menu).

- To change system date and time, use Main menu > Setting > System > Date & Time.
- To modify the channel ID, see display settings (Main menu > Setting > Camera > Configuration).
- To change the camera view configuration, access the Quick menu and select View 1, 4, 8, 9, 16 or 32.

If multiple channels are displayed, double-click on a particular channel to show this channel in full-screen (double-click on it again to return to multiple-channel view). The currently selected channel is shown with a green border.

Each channel may also display one or more of the following icons:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Name</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Recording" /></td>
<td>Recording</td>
<td>shows a channel is recording</td>
</tr>
<tr>
<td><img src="image" alt="Motion detection" /></td>
<td>Motion detection</td>
<td>a movement has been detected in the camera view</td>
</tr>
</tbody>
</table>

Instant playback, Zoom, and Snapshot

Move the mouse to the top of a camera display to show the control bar:

Click an icon for the following functions:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Name</th>
<th>Function</th>
</tr>
</thead>
</table>
| ![Instant playback](image) | Instant playback | Playback the previous 1-60 minutes recorded on the current channel (default is 5 minutes). Click the play bar to any playback start time (use the pause and exit functions as required). During playback:
- channel id and record status of current channel are hidden (they only reappear once you exit preview playback)
- you can not switch the displayed channel or change current window-display mode
Set the playback time in Main menu > Setting > Playback. Note: The system may pop up a dialog box if there is no recorded data for the current channel, or you need to accept a disclaimer before playing. |
Snapshot

Make a snapshot of the current channel display. The system will ask to export the snapshot to an email address, a USB memory device, and/or a DVD:

Note: A disclaimer screen may initially appear when you first select **Snapshot** (click *<Accept>* to continue).

Zoom

Zoom in on a specified zone of current channel (also supported in multiple-channel view).

1. Click the Zoom icon - it will change to 📷.
2. Hold down the left mouse button while selecting a screen area.
3. Release the button to zoom in on the selected area.
4. Right-click the mouse to exit the zoomed area.
5. Exit the zoom function by clicking on the icon again – it will change back to 📷.

### 7.2.2 Pan/Tilt/Zoom

This function is only possible if PTZ cameras are connected to the DVR (usually via the RS485 port).

To swivel the camera view, click on any of the eight direction arrows on the left of the screen.

Use this menu to also setup the following PTZ properties:

- **Speed**: adjust the speed of the camera movements (value ranges from 1 to 8).
- **Zoom**
- **Focus**
- **Iris**

Click on icons 📷 and 📷 to increase or reduce the zoom, focus and iris.

The other buttons on the bottom of the screen are used to assign and activate a set of movements for the camera as follows:

1. Enter a number (from 1 to 999) in the right field (this will be the ID for the preset PTZ movements for the camera).
2. Use the eight direction arrows to swivel the camera to a desired position.
3. Click *<Set>* to assign the final position to the ID.
4. You will be asked to save the preset (use the focus 📷 button to save). This preset can be eventually added to the PTZ activation sequence if an alarm is detected – see **Settings > Alarm**.
5. If required press *<Shot>* to move the camera immediately to a preset ID position.

The Aux buttons are used when activating an ID for special processes stored in the camera:

- **Aux On**: refer to your camera manual for the Aux definition.
- **Aux Off**: switch off the special Aux definition

### 7.2.3 Sequence

Setup the camera sequence and interval times as follows.

**Activate sequence on monitor A (or B)**

1. To view a sequence of live camera pictures from several cameras:
   - Right-click the mouse to access the Quick menu
   - Choose **Sequence on**
2. Check that a sequence of camera pictures appears,
3. To stop sequencing, right-click the mouse to access the Quick menu, and choose **Sequence off**

### 7.2.4 Monitor A
Monitor A shows live pictures of connected cameras in full-screen or multiscreen, plus status messages and alarm events (e.g. motion and video loss warnings). When multiple events occur, camera pictures can also be sequenced on monitor A to follow the events. The search/play function and all user menus are also activated on this monitor.

### 7.2.5 Monitor B (only for DIVAR 5000 models)
Monitor B displays live pictures in full-screen (multiscreen is possible if a multiple-view sequence is enabled on Mon B). If an alarm/detect event is signaled, the camera picture with the event can be displayed on monitor B. When multiple events occur, camera pictures can also be sequenced on monitor B to follow the events.
7.3 Playback

Click **Search/Play** in the Quick menu (or **Playback** in the Main Menu) for the following screen. Note: A disclaimer screen may initially appear (click **Accept** to continue).

See the following table for an overview of the features on this screen.

<table>
<thead>
<tr>
<th>ID</th>
<th>Name</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Display window</td>
<td>Display of the currently chosen picture or file (supports 1/4/9/16-window playback.)</td>
</tr>
<tr>
<td>2</td>
<td>Search type</td>
<td>Here you can select to search for a picture (PIC) or a recorded file (REC). Select to play from the internal HDD or an optional connected external memory device.</td>
</tr>
</tbody>
</table>
### 3 Playback mode and channel selection pane

Choose between 1/4/9/16 window or full screen (toggle the buttons during playback to switch between views):
- **1-window** – select which channel to display from the drop-down menu (select '..' for no channel)
- **4-window** (select which 4 channels to display)
- **9-window** (select channels 1 to 9)
- **16-window** (switch between 1-16 and 17-32 channels – only available for DIVAR AN 5000)
- **Full-screen** (click right mouse button to exit full screen)

### 4 Calendar and time

Select a date to overview the recordings available for that day (dates highlighted in blue have recordings available for that day). The time bar on the bottom of the screen will show a 24-hour trace of the recordings available for the chosen date.

If required, play a recording for a particular date as follows:
- Assign a start time (hour, minute, second) in the time field (below the calendar)
- Press the play button
- Click on a colored zone on the time bar (at the bottom of the screen) to start playing at that selected time
Double click to view a list of recorded files for the selected day.

The list displays the first channel of the recorded file (click the numbers above to select another channel). A maximum 128 files are shown at one time. The character shown beside each file has the following meaning:
- **R** — regular recording
- **A** — external Alarm recording
- **M** — motion detect recording

The time span of ‘R’ recorded files in a file list is determined by the defined ‘Pack duration’ set in the **General** menu screen. For example, if the file list is set with a pack duration of 1 hour, the file list will show a list of files that are all 1 hour long (i.e. from 8:00 to 9:00, 9:00 to 10:00, etc.). ‘M’ and ‘A’ files span the time that the motion/alarm occurred.

Click once on a file to view the file details under the list, or double click a file to playback the file on the screen. You can also select the checkbox beside file(s), then select the ‘Export’ button to export files (See heading ‘Export’ for more information).

For a precise search for a time period, stop the current file being played and enter a period in the time panel (shown above the list):
<table>
<thead>
<tr>
<th></th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>6</td>
<td>Play or Pause (the ‘pause’ button is displayed if the DVR is already playing and you wish to pause the play)</td>
</tr>
<tr>
<td></td>
<td>Stop playback</td>
</tr>
</tbody>
</table>
|   | Backward play  
In normal play mode, left click this button to play the file backwards. Click it again to pause current play.  
In backward play mode, click to restore normal play. |
|   | In playback mode, click to play the next or the previous section (click continuously to watch consecutive files from the same channel).  
In normal play mode, press pause then click and to begin frame-by-frame playback.  
In frame-by-frame playback mode, click to restore normal playback. |
|   | Slow play  
In playback mode, click for various slow play modes such as slow play 1, slow play 2, etc. |
|   | Fast forward  
In playback mode, click to realize various fast play modes such as fast play 1, fast play 2, etc. |
|   | Smart search – see description below |
|   | Turn the audio on/off and adjust the volume during video playback |
|   | Click to export snapshot(s) to a USB memory device, a DVD, and/or an email address:  
– In full-screen mode, move the mouse to the bottom of the screen to select the snapshot button.  
– A disclaimer screen may initially appear when you first select Snapshot (click <Accept> to continue).  
See heading ‘Export snapshot’ for more information. |
| Digital zoom | When the system is in playback mode:  
1. Left-click the mouse in the screen and hold down the mouse button.  
2. Drag to select a section then release the mouse button.  
3. Left-click in the selection for digital zoom of the selection.  
4. Right-click to exit zoom. |
| 7 | Smart search | This function is only active when the system is playing a recording in 1-window mode.

Click ![image](image.png) to activate smart search. See following figure.

![Image of a grid with selected zones](image.png)

Use your mouse to drag and select zone(s) in the window to detect motion.

Click ![image](image.png) again to begin smart search.
The system searches for motion in the chosen area(s).

When ready, click ![image](image.png) again to stop smart search playback.
Extra notes on smart search:
- As default, the system will view the whole play zone as a motion detect region.
- If you choose to play another file in the file list, the system will switch to motion detect play of the other file.
- During motion detect play, you cannot implement operations such as changing the time bar, play backward, or play frame-by-frame.
- System supports 396 (22x18 PAL) and 330 (22x15 NTSC) zones.
|   | Time bar | Displays a maximum 16 channel time bars for the current search date (use the scroll bars on the right to scroll up and down through the available channels). The color of each channel bar changes depending on if a recording is present for the chosen date:  
|   |  | – Green for a regular record file  
|   |  | – Red for an external alarm record file  
|   |  | – Yellow for a motion detect record file  
|   |  | Click on a point in a colored zone in the time bar to begin playback at that point. Alternatively, hold down the left mouse button and select a region of the time bar (the region will be highlighted); right-click on the selected region to display a menu for the following functions (Export region; Restrict/Protect region; Clear region) – see separate descriptions here for Export and Restrict/Protect.  
|   |  | During playback, click on the top of the time bar and hold down the left mouse button to scroll the time bar left or right (not applicable for 24-hour). Alternatively, use the **time bar unit** to zoom in, or scroll (see the following description).  
| 9 | Time bar unit | Use the buttons here to zoom in on the time bar or scroll left or right (this helps to precisely locate a time in the time bar when playing a recording). Alternatively, use the mouse middle scroll wheel to zoom in or out.  
<p>| 10 | Export | Use to export recordings onto a memory device (recordable DVD or USB storage device). See heading <strong>Export</strong> for more information. |</p>
<table>
<thead>
<tr>
<th>11</th>
<th>Restrict/Protect</th>
<th>Use this function to restrict playback of a recording and/or to protect that recording from being deleted. The restrict/protect permission can be individually set for each user account.</th>
</tr>
</thead>
</table>

Restrict/Protect recording(s) as follows:
- Assign a start and end time
- Choose channel(s)
- Choose checkbox for Restrict and/or Protect
- Select <Lock> to lock the segment (the recording appears in a list with start and end time). Repeat these steps for new recordings as needed.
- If required, unlock a recording by selecting its checkbox and select <Unlock>. Delete a recording permanently with <Delete>
- Select <OK> to save the settings (depending on user access, all restricted/protected recordings will show a blank screen with a lock logo when playing)

**Important**: When entering a start and end time for Restrict/Protect playback, be aware that the selected time may include a portion of a recorded file. In this case the complete file will be Restricted/Protected. For example, if you set a start time of 9:30 and an end time of 10:30 then both the recorded files 9:00 to 10:00 and 10:00 to 11:00 will be selected for restrict/protect because they both include portions of the selected time span. The same principle applies if you **Delete** a time period from 9:30 to 10:30 then both the files 9:00 to 10:00 and 10:00 to 11:00 will be deleted.

| 12 | Record type | This status line shows the current play mode (or Stop) and a checked box shows the recording type (Motion, Alarm, Normal, All). |
7.3.1 Export
Access the Export menu from the main menu or Search/Play screen (or by pressing the Export key on the Front Panel or on the remote control). Use this menu to write segments of recorded video to a USB storage device or recordable DVD.

1. Choose from the Selected Device pull-down list to export recording(s) to either a USB memory stick or CD/DVD. If required, <Refresh> the device selection, or <Format> the selected memory device.
2. Choose the save location on the memory device (<Browse> if necessary).
3. Select the Type of file to export (All, Alarm, MD, Alarm/MD, Card, Normal, PIC).
4. Select the File format (DAV or ASF).
5. Enter a Start time and End time for the video segments (files) to archive.
6. Select the Channel to archive (All for all channels).
7. Click <Add> to add the file to the export list.
8. If required, repeat steps 3 to 7 for more recordings. (Remove a selected recording by selecting its check box and pressing <Remove>.)
   The total size of the selected recordings (and available space on the memory device) are shown.
9. Click <Start> to export the selected recording(s).
   If the total size of the selected recordings is more than the free space on the memory device, then only the first recordings that fit are exported.

7.3.2 Export snapshot
Select the checkboxes to export snapshots to an email address, USB memory stick and/or DVD.
If required, enter an email address or choose a specific DVD or USB stick (use <Configure> to define a location on the USB).
Use <Refresh> to refresh the selection if you insert a new USB stick or DVD.

Notice!
Exporting snapshots to a DVD will first format the DVD (deleting all files currently on the DVD).

7.4 Info
Refer to the following sections for a description of these System information menus.

7.4.1 System Alarm
View here the alarm status of your system:
- System alarms (disk, network, temperature)
- Event alarms (Motion detection, video loss, camera input, NVR input). Use the scroll arrows to view all camera events.

7.4.2 System Health
View here the health status of your system:
- Temperature
- CPU load
- Memory usage
- Fan speed
7.4.3  System Version

View here the status of your installed system:
- hardware features (channels, alarms in/out)
- software features
  - system version of your currently installed firmware
  - build date of the firmware
  - web id
  - serial number

You can update the current system version as follows:
1. Insert a USB stick with a preloaded update file (must be called **xxx.bin**).
2. Click **Upgrade**.
4. Click **Start** to begin the update.
5. Wait until the update is complete and the system is restarted.

**Notice!**

Bosch strongly recommends upgrading to the latest firmware for the best possible functionality, compatibility, performance and security.

Check [http://downloadstore.boschsecurity.com/](http://downloadstore.boschsecurity.com/) regularly to see if there is a new firmware version available.

7.4.4  Network Online users

Manage here the online users:
- Disconnect a user by selecting the user and press **Disconnect**.
- Block a user for a max disconnection time:
  - Select the user
  - Click **Block for**
  - Enter a disconnection time up to a maximum 65535 seconds (default is 60 seconds)

The system refreshes every five seconds to detect any newly added or deleted users.

7.4.5  Network Load

See here a real time graphical display of the current load on the network for send and receive traffic.

7.4.6  Network Test

Choose here to do a network test as follows:
1. Enter a **Destination IP** address.
2. Click **Test**.
3. Check the test result in the **Test result** field.

Or choose to do a Network sniffer packet export as follows:
1. Enter a Device name (click **Refresh** if the device is not shown).
2. Enter an Address (click **Browse** to search for the correct path).
3. Select LAN.
4. When the correct sniffer packet is shown, click [ ] to start the export.

7.4.7  HDD General

This screen provides information on the current status of each HDD. After a system start, the system will first check for any HDD error.
**Earliest recording**: shows the date and time of the oldest recording still available on HDD.

**Latest recording**: shows the date and time of the latest recording on HDD.

**Recording status**: shows if HDD can record or not.

**Raid status**: shows if HDD is used in a Raid array.

**Total protected size**: shows the total size of all protected recordings stored on the HDD (you can protect a recording using the Protect Playback function available on the Search/Play screen).

The bottom half of the screen lists each HDD type, total size, and the free space remaining on the disk. Use the **Health** menu for more (Smart) information.

### 7.4.8 HDD Health

**Scan**
Start a scan here to view the current status of all sectors on the HDD(s) installed in your unit. A graphical representation of the HDD segments is shown, plus a readout of the health status of each HDD.

Start the scan as follows:
1. Choose Quick or Full detect.
2. Choose the HDD to be scanned.
3. Press `<Start>`.

**Report**
After a scan is run on your HDD, use the Report tab to display a quick overview of the result. Any detected errors will be shown in the **Error** column (**O** means current HDD is normal; **X** means there is a disk error; **–** means there is no HDD; **?** means disk is damaged).

---

**Notice!**

**If an error (X) is shown**
Check the hard disk time and system time are the same (if necessary, modify system time in **Setting > General**, and reboot the system). If the error persists, check the **S.M.A.R.T.** information (see below) and, if necessary, format the HDD and reboot the system.

If more detailed information is needed, select the 'report icon' under the View column (here you can also select the **S.M.A.R.T.** tab - see below).

To make a backup of the report:
1. Insert a USB stick into an empty slot on the unit.
2. Choose `<Backup>` to export the report to the USB stick.

**S.M.A.R.T.**
Choose here to display all of the Self-Monitoring, Analysis and Reporting Technology information that is automatically collected by the monitoring system included in hard disk drives (HDDs) and solid-state drives (SSDs). This system reports on various indicators of drive reliability, with the intent of enabling the anticipation of hardware failures.

### 7.4.9 Log

View here (and export) the log files containing the following system events:
- **All**
- **System**
- **Config**
- **Storage**
– Event
– record
– Account
– Clear
– Playback
– Connection

The system can display a maximum 100 logs per page and a maximum 115 pages of log files (displayed in order of newest to oldest). Use the scroll bar or Page up/down or Previous/Next page to scroll through the events if there are more than ten events.

How to use log display
1. Select which system events to show from the drop-down menu in the Type field (choose All to display all events).
2. Enter a Start time and End time in the relevant field
3. Click <Search> to view the log for the event type.
4. Use <Play> and <Preview> icons to view events.
5. If required, double-click on a log entry (or select the entry and click <Details>) to view more information on the event.
6. To save the log file to a USB stick, click <Backup> and enter the required fields in the Log backup dialog box.
7. To delete all the log files, click <Clear> and confirm the delete action.

7.5 Export

Assign here a schedule for an automatic export (backup) of a recording to an FTP (File transfer Protocol), SMB (Server Message Block) server, or to an eSata disk (only available for the DIVAR 5000)
– Selected device: choose which device to save the backup
– Path: choose where to save the backup
– Type: Select the type of video for back-up (choose between alarm recording, motion recording, alarm and motion recording, normal recording, or all)
– File format: DAV (default) or ASF
– Start time: Assign the date and start time of the backup (because a backup can drain system performance, always schedule a start time during a quiet period where features such as local playback/export are not required)
– End time: Assign the end date and time of the backup
– Channel: Assign the channel(s) to be backed up (default is All)

Press <Add> to add this export to the schedule list below; add more scheduled backups as required (to remove a scheduled backup, select it on the list and press <Remove>).

Do not forget to press <Start> to start the backup.

The bottom of the screen shows the progress of the backup.

7.6 Event search

Click Event search in the Quick menu (or Event search in the Main Menu) for a list of events (see below for a description of the various events possible for a system).

Options in this screen are:
– Type: Choose from All (default), Motion or Alarm
– Channel: Choose All or specific channels
– Start time: Choose start date and time for search
– End time: Choose end date and time for search
Press **<Search>** to start the event search (all the events found will be listed in the table below). If required, use **<Go to>** to access a particular page in the list of events. To export the event file, use **<Browse>** to assign an export device, then press **<Export>** to export the file (the progress of the export is shown on the status bar).

**System events**

Various types of events change the way the unit works. These events include:

- an alarm input signal applied to the unit
- triggers such as motion detection in a camera signal or a loss of video from one of the cameras or camera masking (the camera is covered or obstructed)
- an internal alert from the unit itself (e.g. disk failure, IP conflict)

The way the unit reacts to events depends on how it is programmed. An event can cause either a trigger or an alarm:

- A trigger changes the way the unit works but does not always require a response from the user situation (triggers and their responses can be configured in Detect). Possible settings are:
  - A motion indicator or video loss indicator flashes.
  - The view modes on the monitors change.
  - A controllable camera might be moved to a pre-defined position.
  - Recording behavior changes.
  - The unit changes the way it operates via pre-defined profiles.

- An alarm also changes the way the unit works but, in addition, usually activates several indicators and requires the user to solve the alarm situation (alarms and their responses can be configured in Alarm). Possible settings are:
  - A beeper sounds.
  - A status message is displayed.
  - An alarm icon is displayed.
  - Recording behavior changes.
  - An output relay is activated.
  - Monitor A can switch to a multiscreen view if more than one alarm occurs. The latest alarm status message is always shown.
8 Archive Player operation

8.1 Getting started

The Archive Player is used to view archived recordings on a PC (each recording is a video file that has been exported from the DVR or Web Client). If required, use the Player to also check the authenticity of an archived recording before viewing.

To easily identify an archived file, check the default export name for the recording time and date.

8.1.1 System requirements

Operating platform: A PC running Windows 8, Windows 10 or Windows 11.

For the Archive Player, the recommended PC requirements are:

- Processor: Intel Core Duo, 2.0 GHz or comparable
- RAM memory: minimum 512 MB
- Graphics card: NVIDIA GeForce 8600 or higher

8.1.2 Installation

The Archive Player normally does not require installation to function. When a video is archived, the Archive Player application file (play.exe) is automatically copied to the same directory as the archived file (except when using the Web Client – see Notice below). When copying the archive file to other media afterwards, make sure to also copy the play.exe file.

NOTICE! The Archive Player will not be downloaded from the DVR when archiving is performed via Web Client. Use the Archive Player available on the Bosch website, the product CD, or download it by performing a local archive. When copying the archive file to other media afterwards, make sure to also copy the Archive playernode:106123408751015 file.

8.1.3 Starting the Player

The Player application (play.exe) is normally loaded into the same directory as the archived files and can be simply started by double-clicking on the ‘play.exe’ file to start the program. Another way to start the player interface (if you have installed it on your PC) is to double-click the icon in the installation path or on your desktop (if it is stored there).

Once started, the player interface screen appears; see the following figure and table for an overview of the screen and its functions:
<table>
<thead>
<tr>
<th>Id</th>
<th>Name</th>
<th>Function</th>
</tr>
</thead>
</table>
| 1  | Menu bar| Here you have the following options:  
**Play Window** (default window) activates a window where you can play pre-recorded files.  
**Export File** activates a window where you can choose files to export to a pre-defined directory – see Export file, page 69  
**Authentication** activates a window where you can check the validity of a recording – see Authentication (checking watermark), page 69  
**Config** is used to setup how the player saves and formats snapshots, and the language for the user interface – see Configuration, page 70 |
<p>| 2  |         | Activates a directory overview where you can browse and choose a file to play. Double-click on a specific file to start playing. |
| 3  |         | Click to show player in full screen (press Esc to return to standard screen) |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>Play screen</td>
<td>Here you can have a maximum 16 player screens to simultaneously play a maximum 16 channels (cameras).</td>
</tr>
</tbody>
</table>
| 5 | ![Screen Control Icons] | Click — to minimize player screen  
Click [ ] to maximize player screen  
Click X to close and exit the player interface  
Click ? to show player software version |
| 6 | Scroll channels | Scroll up and down through the different channels of the currently chosen recording. |
| 7 | Time scale | Move this scale left or right to increase or decrease the time scale on the 'Time bar' (see below) |
| 8 | Audio control | Click here to mute or activate audio (if present in recording). Move the scale bar to increase or decrease volume. |
| 9 | ![Play/Pause Icons] | Play or Pause the recording (the 'pause' button is displayed if the recording is already playing and you wish to pause the play).  
Click a valid period in the time bar and then 'play' to start the file at that point.  
Begin play at start of recording.  
Reverse play; possible speeds are 1/2x, 1/4x, 1/8x, 1/16x, 1/32x, 1/64x  
Fast play; Possible speeds are 2x, 4x, 6x, 8x, 16x, 32x, 64x  
Go to end of recording. |
| 10 | Record type | A checked box shows the settings that were applied for the recorded file (Motion, Alarm, Normal, All). |
| 11 | Time bar | Displays the time span of the currently selected file (the colored segment). The colors are:  
– Green for a regular record file  
– Red if an external alarm is active  
– Yellow if motion detection is active  
A max. 16 channels (bars) are shown for each file. Click on a point in a colored zone in the time bar to begin playback at that point. |
| 12 | Screen views | Select here the number of screens (channels) that are shown (double click on a screen to show it in full screen). See 'Player control' below for a description of additional player buttons in the top of each screen |
| 13 | Tab | Click here to hide or show an extra tab showing the current file (and channels) selected |
**Open an archive file**
After starting the player, check the relevant directory to locate your archive files (identified by file extensions .mpg, .mp4, .dav, .264, .dev, .asf).
These files can be opened and played in 2 ways:
- Using the **Open** button on the player - you will be asked to browse and select the file(s) to be played on the Player.
- Use the mouse to drag an archived file onto the player (you can also drag a batch of files to store them in the player memory; the last file that is dragged onto the player is automatically started in play mode).

**Player control**
As the record file is playing use the player interface buttons to further control the play status of the archived files. Another control possibility is to scroll your mouse over an active channel screen to activate four separate buttons in the top of the screen – see following figure.

These buttons have the following functions:

<table>
<thead>
<tr>
<th>Button</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="logo.png" alt="Icon" /></td>
<td>Show file resolution and frame rate</td>
</tr>
<tr>
<td><img src="logo.png" alt="Icon" /></td>
<td>Zoom in on a segment of the screen (press the button and then select the desired region by drawing a rectangle with your mouse on the screen; if required, press the button again and then scroll the zoomed image with your mouse; when finished, right-click the mouse to exit the zoomed area)</td>
</tr>
<tr>
<td><img src="logo.png" alt="Icon" /></td>
<td>When playing the video file, click to save current video frame as an image file to a specified directory (assigned in Config &gt; Snap Path)</td>
</tr>
<tr>
<td><img src="logo.png" alt="Icon" /></td>
<td>Close the file that is currently playing</td>
</tr>
</tbody>
</table>

**See also**
- **Authentication (checking watermark)**, page 69
- **Configuration**, page 70

## 8.2 Authentication (checking watermark)
Use `<Authentication>` to check the authenticity of individual frames:
1. Click the Open file icon and browse through the relevant directories to choose a record (file) to check.
2. Select the check box beside the file (if not already selected).
3. Click `<Start Check>` to check if the record has been modified or not.
   - The file is displayed in the right column
   - A progress percentage is displayed during the check
   - If required, press `<Stop Check>` to halt the check
4. Upon completion:
   - If the record is original, the word **Original** is displayed in the Results column
   - If the record is false, a warning message is displayed

## 8.3 Export file
Export a file as follows:

1. Choose ![Icon](logo.png) and open a file to be exported.
2. If required, preview the file on the left screen by selecting the check box for the chosen file (if the file has multiple channels, select the check box for the required channel). Use the play, pause, and fast forward/reverse buttons as required.

3. You can also overview the recording contents using the grid in the bottom of the screen.

4. When you have decided on the recording segment that you wish to export, fill in the setup fields (Export format, Start date, End date, Start time, End time, Interval) by manually entering the field values. Or use the grid in the bottom of the screen to select start and end times.

5. Press <Start Export>.

6. In the ‘Save as’ dialog box, choose a directory location and a file name for the export, and press <Save>.
   A progress percentage is displayed during the export
   If required, press <Stop Export> to halt the export

7. When prompted, export the end of the file by pressing <OK>.

### 8.4 Configuration

Here you can set:

- Snap shot location – assign the path and directory to save a snapshot image (if necessary, click on <Browse> and select a new path)
- Snap format - select here the format (JPG or BMP) for the saved snapshot files
- Language – choose here the language for the player user interface
9 Web Client Software

9.1 Getting started

9.2 How to log on

1. Open your web browser and enter the IP address for the DIVAR in the address column. For example, if your DVR IP is 10.10.3.16, then enter http://10.10.3.16

2. If Web Client is already installed, the following Login screen is shown (if Web Client is not installed, check with your administrator for how to do this):

3. Input your user name and password.

4. Select the login mode: LAN or WAN (LAN is for smaller networks; WAN is best for larger networks and the internet – the differences are described in the following pages).

5. Click <Login> to access the Web Client 'Live' window – see below.

Note 1: A disclaimer screen may initially appear (click <Accept> to continue).

Note 2: For security reasons, your password must be defined after you first login.

Note 3: If the maximum number of users for the Web Client is exceeded, a message is displayed.

9.3 Web client live window

9.3.1 Playback mode

9.3.2 Event search

Click Event search to search and playback a selected event.

Choose here:
- Type: Choose from All (default), Motion or Alarm
- Channel: Choose All or specific channels
- Start time: Choose start date and time for search
- End time: Choose end date and time for search

Press <Search> to start the event search (all the events found will be listed in the table below). If required, scroll to a particular page in the list of events.

To export the event file, press <Export> to export the file (a popup screen appears asking where to export the file, and the file format). Assign the fields and press <Export> again).
The progress of the export is shown on the status bar.

9.3.3 Export
Assign here a schedule for an automatic export (backup) of a recording to a directory.
- **Path:** choose where to save the backup
- **Type:** Select the type of video for back-up (choose between alarm recording, motion recording, alarm and motion recording, normal recording, or all)
- **File format:** DAV (default) or 2nd stream
- **Bit stream type:** Main stream (default) or ASF
- **Start time:** Assign the date and start time of the backup (because a backup can drain system performance, always schedule a start time during a quiet period where features such as local playback/export are not required)
- **End time:** Assign the end date and time of the backup
- **Channel:** Assign the channel(s) to be backed up (default is All)

Press `<Add>` to add this export to the schedule list below; add more scheduled backups as required (to remove a scheduled backup, select it on the list and press `<Remove>`). Press `<Calculate>` to calculate the expected size of the export.

Do not forget to press `<Start>` to start the backup.

The bottom of the screen shows the progress of the backup.

9.3.4 Setting

9.3.5 Info
Here you can select various sub-menus to display important system information. See the description of Settings > Info for more details.

9.3.6 Logout
Click `<Logout>` to go back to the log in interface.
10 Troubleshooting

If errors persist, a common solution is to upgrade your DVR with the latest firmware.

**Cannot boot up correctly**
- Input power is incorrect.
- Power connection is faulty.
- Power switch button is faulty.
- Program upgrade is incorrect.
- HDD malfunction or HDD cable connection is faulty (check HDD info screen for status).
- Front panel error.
- Main processor board is damaged.

**Program upgrade is incorrect**
- Check the program upgrade file is the correct version
- Try upgrading the program again
- If the upgrade still does not succeed, contact Bosch service

**HDD malfunction**
- Check the HDD cabling
- Format the HDD

**DVR automatically shuts down or stops running**
- Input voltage is not stable or is too low.
- HDD malfunction or HDD cable connection is faulty (check HDD info screen for status).
- Front video signal is not stable.
- Working environment is too harsh (e.g. too much dust) or temperature is too high or too low.
- Hardware malfunction.

**System cannot detect hard disk**
- HDD malfunction or HDD cable connection is faulty (check HDD info screen for status).
- Main processor board SATA port is faulty.

**No video output (on one-channel, multiple-channel or all-channel output)**
- Program is not compatible. Please upgrade to the latest version.
- Brightness is 0. Please restore factory default setup.
- There is no video input signal or it is too weak.
- Check privacy mask setup or your screen saver.
- DVR hardware is faulty.

**Error displaying Camera x, bad signal**
- Check the camera connections and replace/tighten the connections if necessary.
- Check the camera video signal and replace the camera if necessary (you can exchange connections from a correctly operating camera to test if the connections or camera are faulty)

**Real-time video color is distorted**
- When using BNC output, NTSC and PAL setup is not correct (the real-time video becomes black and white).
- DVR and monitor resistance is not compatible.
- Video transmission is too long or degrading is too large.
- DVR color or brightness setup is incorrect.

**Cannot search local records**
- HDD malfunction or HDD cable connection is faulty (check HDD info screen for status).
- Upgraded program is not compatible.
- The recorded file has been overwritten.
- Record function has been disabled.

**Video is distorted when searching local records**
- Video quality setup is too low.
- Program read error, bit data is too small. There is mosaic in the full screen. Please restart the DVR to solve this problem.
- HDD malfunction or HDD cable connection is faulty (check HDD info screen for status).
- DVR hardware is faulty.

**There is no audio when monitoring**
- No power to pickup.
- No power to acoustics.
- Audio cable is damaged.
- DVR hardware is faulty.

**There is audio when monitoring but there is no audio during playback**
- Setup is incorrect. Please enable the audio function.
- Corresponding channel has no video input. Playback is not continuous when the screen is blue.

**Time display is incorrect**
- Setup is incorrect.
- Battery contact is incorrect or voltage is too low.
- LED display is faulty.

**DVR cannot control PTZ**
- Front panel PTZ error.
- PTZ decoder setup, connection or installation is incorrect.
- Cable connection is faulty.
- PTZ setup is incorrect.
- PTZ decoder and DVR protocol is not compatible.
- PTZ decoder and DVR address is not compatible.
- When there are several decoders, please add 120 Ohm between the PTZ decoder A/B cables furthest end to delete the reverberation or impedance matching. Otherwise the PTZ control is not stable.
- The distance is too great.

**Motion detection function does not work**
- Period setup is not correct.
- Motion detection zone setup is not correct.
- Sensitivity is too low.
- For some versions, there is hardware limit.

**Cannot log in client-end or web**
- For Windows 98 or Windows ME users, please update your system to Windows 2000 SP4 (or install client-end software for previous versions). The DVR is not compatible with Windows VISTA control.
- ActiveX control has been disabled.
- No dx8.1 or higher. Please upgrade display card driver.
- Network connection error.
- Network setup error.
- Password or user name is invalid.
- Client-end is not compatible with DVR program.

**No video (only mosaic) during remote preview or playback of video file**
- Network fluency is poor.
- Client-end resources are limited.
- Multiple-cast group setup in DVR is causing mosaic (this mode is not recommended).
- There is privacy mask or channel protection setup.
- Current user has no rights to monitor.
- DVR local video output quality is poor.

**Network connection is instable**
- Network is instable.
- IP address conflict.
- MAC address conflict.
- PC or DVR network card is faulty.

**Burn error / USB backup error**
- System uses too much CPU resource. Please stop recording first and then begin backup.
- Data amount exceeds backup device capacity (causing burner error).
- Backup device is not compatible.
- Backup device is damaged.

**Keyboard cannot control DVR**
- DVR serial port setup is incorrect.
- Address is incorrect.
- Several switchers are draining power supply.
- Transmission distance is too great.

**Alarm signal cannot be disarmed**
- Alarm setup is incorrect.
- Alarm output has been opened manually.
- Input device error or connection is faulty.
- Program version may be incorrect - please upgrade your system.

**Alarm function is null**
- Alarm setup is incorrect.
- Alarm cable connection is faulty.
- Alarm input signal is incorrect.
- Two loops connect to one alarm device.

**Remote control does not work**
- Remote control address is incorrect.
- Distance is too great or control angle is too small.
- Remote control battery power is low.
- Remote control or DVR front panel is damaged.

**Record storage period is too short**
- Camera quality is too low.
  - Lens is dirty
  - Camera is installed facing the light
  - Camera aperture setup is incorrect.
- HDD capacity is insufficient.
- HDD is damaged.

**Cannot playback the downloaded file**
- No media player.
- No DXB8.1 (or higher) graphic acceleration software.
- No DivX503Bundle.exe control when you play the file transformed to AVI via media player.
- No DivX503Bundle.exe or ffdshow-2004 1012.exe in Windows XP OS.

**Forgotten local menu operation password or network password**
Please contact your local service engineer or Bosch sales group for help.
11 Maintenance

11.1 Insert DIVAR 5000 in rack

1. Remove the four cross head screws (two on each side) located near the front panel on the right and left side of the unit.
2. Secure the supplied brackets to each side using the same four cross head screws (two on each side) that were just removed.
3. To install several units directly on top of each other, remove the rubber feet from under the unit by prying them loose with a small screwdriver.
4. Install the unit into the rack using the hardware supplied with the rack and following the rack manufacturer’s instructions.
5. Support the back of the unit and secure the connection cables to the rack to relieve excessive weight to the back of the unit.

Notice!
When installing the assembly into the rack, do not restrict air flow around the vents located on the side panels or exceed the recommended operating temperature.

11.2 Replace internal battery

Warning!
Lithium battery:
Batteries that have been inserted wrongly can cause an explosion. Always replace empty batteries with batteries of the same type or a similar type recommended by the manufacturer. Handle used batteries carefully. Do not damage the battery in any way. A damaged battery may release hazardous materials into the environment. Dispose of empty batteries according to the manufacturer’s instructions, or local directives.

Replace internal battery
This product uses a 3.0 V Lithium CR2032 battery as the backup power supply for internal system status (e.g. real time clock). Under normal circumstances this battery will last a minimum of 5 years. Low battery power may mean that system time must be reset at each power up. A log message appears when the battery needs replacing (only replace when required). Contact Bosch for replace instructions.

11.3 Install HDD
See separate Quick Install Guide. Refer to the Appendix for recommended HDD types.
11.4 Install DVD

See separate Quick Install Guide.
Refer to the Appendix for recommended DVD types.
12 Decommissioning

12.1 Transfer

The unit should only be passed on together with this installation guide.

12.2 Disposal

Disposal - Your Bosch product was developed and manufactured with high-quality material and components that can be recycled and reused. This symbol means that electronic and electrical appliances, which have reached the end of their working life, must be collected and disposed of separately from household waste material. Separate collecting systems are usually in place for disused electronic and electrical products. Please dispose of these units at an environmentally compatible recycling facility, per European Directive 2012/19/EU.

14 Appendices

14.1 Software licenses

This product contains both software that is proprietary Bosch software licensed under the Bosch standard license terms, and software licensed on the basis of other licenses.

14.1.1 Bosch software

All Bosch software is licensed under the terms of the End User License Agreement (EULA) of Bosch Security Systems B.V. or Bosch Security Systems Inc, as available together with the physical carrier (CD or DVD). Any use is subject to agreement and compliance with such EULA, as applicable.

14.1.2 Other licenses — copyright notices

- GPL v2 copyright notice: This product includes software licensed under the GNU GPLv2 Copyright © 1989, 1991 Free Software Foundation, Inc. 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA.
- GPL v3 copyright notice: This product includes software licensed under the GNU GPL v3 Copyright © 2007 Free Software Foundation, Inc. (http://fsf.org/)
- LGPL v2.1 copyright notice: This product includes software licensed under the GNU LGPL v2.1 Copyright © 1991, 1999 Free Software Foundation, Inc. 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
- SSL Copyright notice: This product includes software developed by the OpenSSL Project for use in the OpenSSL Toolkit (http://www.openssl.org/) Copyright © 1998-2008 The OpenSSL Project. All rights reserved.

At the time of printing this manual, the following extra licenses apply to the applicable software components included in the DIVAR:

<table>

(*) Full texts of the appropriate licenses are available at the URL links and are also delivered together with the software on the physical carrier.

Bosch is committed to comply with the relevant terms of any open source license included in its products. To this effect, Bosch has created a web site (www.boschsecurity.com/oss) to enable any licensee of open source software to have access to the relevant source code or other information that such licensee may be entitled to under the terms of a relevant license.
Any software that is licensed under an open source license, under the terms of which the licensee is entitled to obtain the program or its source code, can be obtained through the OSS web site, indicated below, for the relevant period as mentioned in the relevant open source license.

The relevant open source software can be found at: www.boschsecurity.com/oss

To obtain the complete Corresponding Source Code in the physical medium such as CD-ROM by airmail, Bosch may charge for reasonable costs related to producing a physical carrier of open source software or source code. This offer is valid to anyone in receipt of this information.

14.1.3 Warranties and disclaimer of warranties
Software provided under other licenses has specific disclaimers of warranties. These are repeated in the full license texts, and apply in full to the relevant software components. All software components provided under the other licenses are provided "as is" without any warranty of any kind, including but not limited to any implied warranty of merchantability or fitness for a particular purpose, unless stated otherwise in writing. Please see the full text of the relevant software licenses for further details. The Bosch standard product warranty only applies to the combination of hardware and software as delivered by Bosch. Without prejudice to any licensee’s right to apply the provisions of a relevant software license, any modification of any software delivered with or as part of the product may render any warranty on the whole product or any parts thereof null and void, and Bosch is entitled to charge fees for any services in relation thereto.

14.2 DVD Compatibility

</table>

* The Western Digital PUR models are available from Bosch Security Systems as DVR-XSxx0-A Storage Expansion Kits.

**Warranty and support issues:**
Bosch can not be held liable for any loss or damages or system malfunction resulting from the use of non-Bosch HDDs in the DIVAR.

Bosch provides advance exchange and carry-in service on Bosch products only. Non-Bosch hard drives should be removed from DIVAR recorders when returning these units for repair. Should non-Bosch HDDs be returned, then Bosch will not be held responsible for loss of these drives or any information recorded on these drives or for any consequential damages. Bosch will not be held liable for loss or consequential damages resulting from disclosure of any information stored on non-Bosch drives.

**Legal note:**
Video loss is inherent to digital video recording; therefore Bosch cannot be held liable for any damage that results from missing video information. Bosch does not make any commitments or promises regarding quality, performance or other features with respect to third party HDDs. The information included here is provided "as is". *No representation or warranty, express or implied, is or will be made in relation to, and no responsibility or liability is or will be accepted by Bosch or its subsidiaries as to the accuracy or completeness of the given Information included here or any other written or oral information made available to any.*
