

Overview

The IFS AT/AR1000 series audio transmitter and receiver provide one-way transmission of an audio signal on one optical fiber. The IFS AR2000 series audio transceiver provides bi-directional transmission of one audio signals on one or two optical fibers. The modules use frequency modulation (FM) for superior transmission of balanced or unbalanced line-level audio (2.2 V peak-to-peak). Models within this series are available for use with multimode or single mode optical fiber. Plug-and-play design ensures ease of installation requiring no electrical or optical adjustments. The modules incorporate power and carrier detect status indicating LED's for monitoring proper system operation. The modules are available in either stand-alone or rack mount versions.

Application Examples

- Transmission of Stage Mics from Pre-amp to Amplifier
- Recording Studios and Post-Production Facilities
