Overview
The S708V fiber links use revolutionary Coarse Wavelength Division Multiplexer (CWDM) technology to provide simultaneous long-range transmission of multiple full-frame, real-time video signals over one multimode fiber.

Exceptional Performance
The eight-channel system features a bandwidth of 6.2 MHz per channel and optical automatic gain control (OAGC). It accepts analog baseband input signals and converts them to digital format for transmission, assuring high-quality video outputs at the receiver.

Superior Diagnostics
The SMARTS™ diagnostic technology includes a built-in video test pattern generator on the transmitter for system setup and on-screen diagnostics to indicate insufficient optical power or an inactive video channel for each output. LEDs monitor the status of the video and optical signals.
