IMPORTANT SAFETY INSTRUCTIONS

Read these operating instructions carefully before using the unit. Follow all the safety instructions listed below.
Keep these operating instructions handy for future reference.

1) Read these instructions.
2) Keep these instructions.
3) Heed all warnings.
4) Follow all instructions.
5) Do not use this apparatus near water.
6) Clean the contaminated area on the product surface with a soft, dry cloth or a damp cloth. (Do not use a detergent or cosmetic products that contain alcohol, solvents or surfactants or oil constituents as they may deform or cause damage to the product.)
7) Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
8) Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9) Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10) Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11) Only use attachments/accessories specified by the manufacturer.
12) Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
13) Unplug this apparatus during lightning storms or when unused for long periods of time.
14) Refer all servicing to qualified service personnel. Servicing is required when the apparatus does not operate normally, or has been damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

Standards Approvals

FCC
- Any changes or modifications in construction of this device which are not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

CE
- This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
- This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

BEFORE START

This manual provides operational information necessary for using the product and contains a description about each component part and its function as well as menu or network settings. You have to keep in mind the following notices:

- Hanwha Techwin retains the copyright on this manual.
- This manual cannot be copied without Hanwha Techwin’s prior written approval.
- We are not liable for any or all losses to the product incurred by your use of non-standard product or violation of instructions mentioned in this manual.
- Prior to opening the case, please consult a qualified technician first. Whenever this is needed power must be removed from the unit.
- Before adding a hard disk drive or external storage (USB memory, USB HDD, etc), check if it is compliant with this product. For the compatibility list, contact the retailer.

Warning

Battery
It is essential that when changing the battery in the unit, the replacement battery must be of the same type otherwise there may be a possibility of an explosion.
The following are the specifications of the battery you are using now.
- Normal voltage : 3V
- Normal capacity : 210mAh
- Continuous standard load : 0.4mA
- Operating temperature : -20°C ~ +60°C (-4°F ~ +140°F)

Caution
- Connect the power cord into a grounded outlet.
- The Mains plug is used as a disconnect device and shall stay readily operable at any time.
- Batteries shall not be exposed to excessive heat such as sunshine, fire or the like.
- Risk of Explosion if Battery is replaced by an Incorrect Type. Dispose of Used Batteries According to the Instructions.

System Shutdown
Turning off the power while the product is in operation, or undertaking improper actions may cause damage or malfunction to the hard drive or the product. Press «OK» on the system shutdown popup window and then remove the power cable to ensure a safe power off. You may want to install a UPS system for safe operation in order to prevent damage caused by an unexpected power stoppage. (Any questions concerning UPS, consult your UPS retailer)
- If powered off abnormally, restarting may take more time for restoring data from hard disk drive for proper operation.

CALIFORNIA USA ONLY
- This Perchlorate warning applies only to primary CR (Manganese Dioxide) Lithium coin cells in the product sold or distributed ONLY in California USA.
- Perchlorate Material - special handling may apply.
See www.dtsc.ca.gov/hazardouswaste/perchlorate.
Operating Temperature
The guaranteed operating temperature range of this product is 0°C ~ 40°C (32°F ~ 104°F).
This product may not work properly if you run right after a long period of storage at a temperature below the
guaranteed one.
Prior to using a device that has been stored for a long period in low temperatures, allow the product to stand at
room temperature for a period.
Especially for the built-in HDD in the product, its guaranteed temperature range is 5°C ~ 55°C (41°F ~ 131°F).
Likewise, the hard drive may not work at a temperature below the guaranteed one.

Ethernet Port
This equipment is in door use and all the communication wirings are limited to inside of the building.

Security Precautions
The initial administrator ID is "admin" and the password should be set when logging in for the first time.
Please change your password every three months to safely protect personal information and to prevent the
damage of the information theft.
Please, take note that it’s a user’s responsibility for the security and any other problems caused by
mismanaging a password.

### APPENDIX
- 77 Product Specification
- 79 Product Overview
- 80 Default Setting
- 82 Troubleshooting
- 85 Open Source License Report on the Product
FEATURES

The product records video and audio from network cameras to a hard disk, and enables playback from the hard disk. It also provides remote monitoring environment for video and audio over the network using a remote computer.

- User-friendly UI
- Supports a range of 4K camera resolutions (4096X2160)
- Outputs a 4K high definition image using HDMI
- Record and play video
- Record and play audio
- Supports ONVIF Profile S standard and RTP / RTSP protocols
- Display the HDD operation status by HDD SMART
- HDD overwrite enabled
- Backup using USB 2.0, 3.0 protocols and external HDD
- Simultaneous play of 4, 8 channels
- Various Search Modes (Time, Event, Smart, Text, Backup, ARB)
- ARB support (configuration feature for saving period by channel)
- Various Recording Modes (Normal, Event, Scheduled Recording)
- Alarm Input / Output
- Remote Monitoring function by Windows Network Viewer
- Live monitoring of the network camera
- Installation Wizard Function (Easy Setup, Quick Setup)
- Supports the smartphone remote monitoring feature by P2P support
- Provides smartphone event alarm (sending real-time event messages)

Package Contents

Please unwrap the product, and place the product on a flat place or in the place to be installed. Please check the following contents are included in addition to the main unit.

- Accessory category and quantity may differ depending on sales region.

REMOTE CONTROL

POWER
Displays the Exit pop up screen.

REC
Starts or ends the live recording.

ID
Sets the ID of the system. Select 2 digits from 0 ~ 9 while pressing the ID Key.

VIEW
Runs the View function in the PTZ mode.

BACKUP
Displays the Backup Menu.

RETURN
Returns to the previous screen.

REC LOCK
Selects the recording lock function.

AUDIO
Turns Audio on/off.

SEARCH
Displays the search menu.

PRESET
Displays the Preset Setup.

FREEZE
Freezes the screen temporarily.

ZOOM
Runs the digital zoom (x2) function.

NUMBER [0~+10]
Used as the numeric input keys, or displays a single channel.

T/W
Zooms in or out.

PTZ
Displays or ends PTZ.

MODE
Changes the screen mode.

MENU
Display the live screen menu.

SCROLL
Moves the menu scroll.

SEARCH
Displays the search menu.

PRESET
Displays the Preset Setup.

FREEZE
Freezes the screen temporarily.

ZOOM
Runs the digital zoom (x2) function.

Skip Backward (by unit time), Slow Rewind, Slow Forward, Skip Forward (by unit time)

Using the Numeric buttons

1. Select a number between 1 and 8.
2. Move to the selected channel number.

Changing the Remote Control ID

Remote control’s ID and NVR’s ID should be matched for proper operation.

1. Press the [ID] button of the remote control and check the ID displayed on the NVR screen. The factory default ID of the remote control is 00.
2. Enter 2 digits of your selection in order, while pressing the [ID] button of the remote control.
3. When ID input is done, press the [ID] button of the remote control again to check the setting.

* If you want to change the remote control ID to 08: Press 0 and 8 in order while the [ID] button of the remote control is pressed.

For changing the ID of remote device, refer to “Remote Devices” (Page 39).
Please take note of the followings before using this product.

- Do not use the product outdoor.
- Do not spill water or liquid in the connection part of the product.
- Do not impose the system to excessive shock or force.
- Do not pull out the power plug forcefully.
- Do not disassemble the product on your own.
- Do not exceed the rated input/output range.
- Use a certified power cord only.
- For the product with an input ground, use a grounded power plug.

CHECKING THE INSTALLATION ENVIRONMENT

This product is a top-notch security device that is equipped with a high-capacity HDD and other key circuit boards. Note that an excessive internal temperature of the product may cause a system failure or a shortened product life (see the right figure). Keep in mind the following instructions before installing the product.

When mounting the product on a rack, comply with the following instructions.

1. Please ensure that the rack inside is not sealed.
2. Please ensure the air is circulated through the inlet/outlet as shown in the picture.
3. If you pile up the products or other rack-mount devices as shown in figure 2, secure room for ventilation or install a vent.
4. For natural air convection, place the inlet at the bottom of the rack and the outlet on top.
5. It is strongly recommended that a fan motor is installed at the inlet and the outlet for air circulation. (Please fit a filter at the inlet to screen dust or foreign substances.)
6. Please maintain the temperature inside the rack or surrounding areas between 0°C ~ 40°C (32°F ~ 104°F) as shown in the figure 1.

Rack Mount Instructions - The following or similar rack-mount instructions are included with the installation instructions:

A) Elevated Operating Ambient - If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature (Tma) specified by the manufacturer.

B) Reduced Air Flow - Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.

C) Mechanical Loading - Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.

D) Circuit Overloading - Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on overcurrent protection and supply wiring.

E) Reliable Earthing - Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips).

HDD ADDITION

Make sure to unplug the power cord from the wall outlet to prevent possible electric shock, injury or product damage. Please consult your provider for further information on HDD installation since improper installation or settings may damage the product.

- Number of HDDs supported:
  - XRN-410S: Max. 1
  - XRN-810S: Max. 2

Make sure to unplug the power cord from the wall outlet before proceeding with the installation.

- Cautions for data loss (HDD care)
  - Please pay attention so that the data inside the HDD is not damaged.
  - Before adding a HDD, please check the compatibility with this product.
  - HDD is vulnerable to malfunction due to its sensitive nature especially against shock when operating.
  - Please ensure that the HDD is free from such shock.
  - We are not liable for any damage to the HDD incurred by user’s carelessness or miss use.

- Cases might cause damage to HDD or recorded data
  - To minimize the risk of data loss from a damaged HDD, please backup data as often as possible.
  - If exposed to shock when disassembling or installing, data stored in the hard disk may be damaged.
  - A sudden power failure or turning off the product while in HDD operation may damage the hard disk drive.
  - HDD or files stored inside may be damaged if the main body is moved or impacted during the HDD operation.

Cautions when installing a HDD

1. Do not apply excessive force to the HDD.
2. Pay attention so as not to lose the disassembly screws or accessories.
   - If the screws or accessories are not put together correctly, the product may breakdown or not operate properly.
3. Please check the HDD compatibility before adding a HDD.
   - Please contact your nearest dealer to obtain the list of compatible devices.
Installing the HDD

If you are adding a new or previously used HDD to this product in addition to the HDD(s) originally installed, format the new HDD manually in the set before use. For information on how to format an HDD, refer to "Device/Format" (page 37).

How to install an HDD in XRN-410S

1. After unscrewing, push back and remove the cover.

2. Connect the SATA/power cables of the HDD to the connectors on the mainboard.

3. Using the screws, fix the HDD to the bottom of the set.

4. Check for any problems in the connection terminal and the wiring in the product, close the cover and fix it with screws.

5. Close the cover, and tighten a setscrew in the back.

How to install an HDD in XRN-810S

1. After unscrewing, push back and remove the cover.

2. Separate them by unscrewing the fixed bracket screw and push it towards the arrow on the board.
3. After aligning and inserting one side of the HDD to the bracket, open the other side bracket wide and insert the HDD between them.
   * Align a hole in the bracket with a screw hole in the HDD to fix them.

4. Push the bracket with the HDD installed and tighten the screws to fix it.

5. Close the cover and tighten the screws to fix it.
CONNECTING TO AN EXTERNAL DEVICE

- The following figures are based on Model XRN-810S.

![Connecting to other device](image)

CONNECTING THE USB

1. On the front of the product, there is a USB port.
2. You can connect a USB HDD, USB memory or mouse to the USB port.
3. If a USB HDD is connected to the system, recognition and settings are available in "Menu > Device > Storage Device". (Page 37)
4. The product supports hot plugging function that enables connecting/disconnecting USB devices while in operating the system.

- Unrated or improper power source may cause damage to the system. Ensure that you use only the rated power source before pressing the POWER button.

![Connecting the USB](image)

CONNECTING THE ALARM INPUT/OUTPUT

The Alarm In/Out port at the back is composed of the following.

- ALARM IN 1 – 4 : Alarm Input Port
- ALARM OUT 1 – 3 : Alarm Output Port

![Alarm input/output](image)

- Unrated or improper power source may cause damage to the system. Ensure that you use only the rated power source before pressing the POWER button.
**CONNECTING THE NETWORK**

For more information about network connection, refer to "Network Configuration" (Page 44)

Network connection via Ethernet (10/100/1000BaseT)

Network connection via router

---

**Connecting to Internet through PPPoE**

**Connecting the network camera**

*PnP mode*

*Manual mode*
GETTING STARTED

Starting the system

1. Connect the power cable of the NVR to the wall outlet.
2. You will see the initialization screen.
   The initialization process will last about 2 minute.
   If a new HDD is installed, the initialization process may take longer.
3. The live screen appears with a beep.

Install Wizard

As shown below, proceed through each step of the <Install Wizard>.

1. In the <Language> screen, select the language and press the <Next> button.
2. In the <ID/PW> screen, set the password and press <Next>.

   Setting Camera Password

   You can change the password of the camera en bloc if the camera password is in a factory reset state.
   If the camera password is not in a factory reset state, please enter the password of the current camera to register the camera.
   - New Password : Input a new password according to the password setting rules.
   - Confirm Password : Input the new password again.

   A camera password registered with ONVIF and RTSP cannot be changed.

   Password setting guide

   When you click <>, a basic guide for setting a password is displayed.
   Check the password setting rules.

3. In the <Network> screen, set the network access method and the access environment. To use a simple intranet, click <Next>.
   - DHCP server : If the DHCP server is set to enable, an IP is automatically assigned to the camera.
     For more information, please refer to "DHCP Server" in the menu settings. (Page 49)
   - Network 1 (Camera) : Connects to the camera and receives the video feed from the camera
   - Network 2 (All) : This is a port for transmitting an image to the webviewer.
   - Network 1 / Network 2 Setup
     - IP Type : Choose the network connection method.
     - IP Address, Subnet Mask, Gateway, DNS

   The searched camera will be automatically registered and the initial recording value will be displayed.

   In the camera registration window, click the <Cancel> button to modify the recording settings automatically set.

   If there are 8 or less cameras searched

   • If there are 8 or less cameras searched

   1. The searched camera will be automatically registered and the initial recording value will be displayed.

   • If there are more than 8 cameras searched

   2. In the camera registration window, click the <Register> button. Once camera registration is finished, proceed in the same steps as after auto registration.

   If the LAN cable is not connected to the port, the setting button will not be activated for use. Check the LAN cable connection.
   The built-in DHCP Server in NVR will turn on automatically at stage 3. At this stage, using the existing DHCP server in the same network may cause a problem, as two DHCP servers would be simultaneously operating.
   For more details on network settings, refer to the user manual.

   4. After setting the date/time settings in the <Date/Time> screen, click on the <Finish> button to launch the setting completion window.

   5. In the setting completion window, click on the <OK> button to finish camera setting and launch the camera registration screen.

   6. If there are 8 or less cameras searched, it will be automatically registered and the camera information(fps, days of recording) will be displayed.

   • If there are 8 or less cameras searched

   • If there are more than 8 cameras searched
Shutting Down the System

1. Press the [POWER] button for your remote controller or select <Shutdown> in the live screen menu.
2. The “Shutdown” confirmation pop-up window will appear.
3. Using the directional button on your remote control, select <OK> and press the [ENTER] button or click on <OK>. The system will shut down.

- Only the user with the “shutdown” permission can shut down the system.
- For the permission management, refer to “User > Setting Permissions”. (Page 28)

Login

To use the NVR menu, you are required to login as a user that is authorized to access the applicable menu.

1. In the live mode screen, right click the mouse button or press the [MENU] button on your remote control. You will see the context menu on the screen as shown.
2. Select <Login>. The login dialog appears.

- Even if you press the menu button that requires a login with the remote control, the login screen will appear.
- The initial administrator ID is set to “admin” and you will need to configure the password in the installation wizard.
- Please change your password every three months to safely protect personal information and to prevent the damage of the information theft. Please, take note that it’s a user’s responsibility for the security and any other problems caused by mismanaging a password.

- For the restricted permission, refer to “User > Setting Permissions”. (Page 28)

LIVE SCREEN CONFIGURATION

Icons on the Live Screen

You can check the status or operation of the NVR with the icons on the live screen.

</table>

### Error Information
- If the built-in HDD is not connected, the “NO HDD” icon (tı) will be displayed in the top left corner. In this case, make sure you contact the service center for assistance as this may cause a failure of recording, playback or backup.
- If you see the NO HDD (tı), HDD FAIL (tı) icons on the screen, contact the service center for more details.

### Live Screen Menu

Beside the functional buttons for your remote control, in the live screen mode, you can right click with the mouse button or press the [MENU] button on your remote control to launch the live screen menu from where you can access each menu from.

The context menu differs depending on the state of Log in/out, split mode, and NVR operation status.

- Depending on the user permissions, you may have limited access to menu items of Live View, Backup, Stop Recording, Search, PTZ, Remote Alarm Output, and Exit.

### Single Mode Menu

The single mode menu is available only in Single Mode.

If the menu is displayed as <Screen Mode> in the single screen, it is displayed as a <Full Screen> in the menu where only one channel is selected in the split screen.

View the Launcher Menu

The Launcher menu appears on the bottom of the live screen.

1. Select <Show Launcher> in the context menu of the Live screen.
2. Move the cursor to the bottom and click a desired item in the Launcher menu.

- If no input is entered for 10 seconds, the menu will disappear.
- The Launcher menu can be accessed only by using the mouse.
- XRN-410S only supports full screen, 2/3/4-split screen, and automatic switchover screen.

### Live Screen Mode

You can play up to 8 live video channels in single, 6 type-split, or auto sequence mode.

* When you register a camera, the Live4NVR profile is created to set H.264 800’600 30fps as default. If necessary, you can change it in Menu > Device > Camera > Camera Settings. If the performance is exceeded, it may play I frame only. If you cannot create an additional profile for the camera specifications, then sometimes you cannot create Live4NVR. In this case, you need to modify the camera profile. Refer to “Camera Setting”. (Page 34)

**Method for displaying screen mode**

If you want to change the split mode, select a screen mode suggested in the launcher menu or right click with the mouse button and select a split mode in the screen mode menu. Press the [MODE] button on your remote controller to change it in the order suggested in the launcher menu.

* XRN-410S only supports full screen, 2/3/4-split screen, and automatic switchover screen.
Switching the split mode

You can also play 8 Live channels in the sequence of: Single, 4-split mode.
Press the button in the launcher or use the right menu to automatically switch the screen.
Mouse right button menu → Screen mode → Auto switching mode
If you reach the end of the steps as outlined in the previous page, you will be moved to the first page and no automatic switching will be performed.

Auto Sequence

- In a split mode, if you have set <Sequence switching time> in “Setting the Device > Monitor”, Auto Sequence will be conducted at the set interval. (Page 39)
- When you switch the channel, the video may be delayed depending on the network condition.

Manual Switching

Press the left/right button on the front panel or the remote control, or click the arrow <◄►> key to move to the next split mode.
- If pressing the right [►] button in 4-split mode:
  4-split (CH 1–4) mode → 4-split (CH 5–8) mode → Auto Sequence

Status

You can check the connection information of the camera to be connected to each channel on the live screen.

Channel information

Select the <CH info> in the live screen menu to check the status of camera connection to each channel.

Live Status

If you select <Live> in the <Status> menu on the live screen, you can check the transmission information and state of the camera connected to each channel.
- Model: Displays the camera model name connected to each channel.
- Status: Displays the status of camera connection set to each channel.
- IP Address: Displays the IP address of a camera set to each channel.
- Codec: Displays the live profile codec information for a camera set to each channel.
- Resolution: Displays the live profile resolution of a camera set to each channel.
- Frame Rate: Displays the live profile transmission rate for a camera set to each channel.
Record Status

If you select <Record> under the <Status> menu on the live screen, you can check a channel’s video type, recording type, number of input/recording frames, allowed/input/recording data volume.

- **Total Bitrate (Record/Max)**: Record bitrate shows the amount of actual data recording while Total bitrate shows the maximum data transfer allowed by the NVR.
- **Profile**: Shows the video profile configured to each channel.
- **Frame (fps)**: Show the input/recorder frames per second for each channel.
- **Bitrate (bps)**
  - Limit / Input / Record: Shows the amount of limit/input/recording data for each channel.
  - Input / Limit: Shows the data ratio of actual data transferred from the camera and allowed maximum defined by user.
- **Current**: Shows the recording status information of currently transferred data.
- **MAX**: Shows recording information of the most biggest recording data out of configured standard and event recordings.
- **•**: Reloads the recording information.
- **Record Setup**: The menu screen will switch to the record setting screen.

PoE Status

When <PoE> is selected in the <Status> menu of the live screen, the PoE status in each port can be determined.

1. **Consumption(W)**: Displays the power consumption in PoE.
   - 0: No device is connected to the port or a device is using its own power supply.
   - “-“: Trouble in the port (More detailed trouble information can be displayed in additional information.)

2. **Overall PoE power specifications are as follows: XRN-810S(8 ports) is 100W, and XRN-410S(4 ports) is 50W. If a single port exceeds 36W, or the power to all ports exceeds the overall PoE power specifications, the power to ports will be shut off sequentially.
**LAYOUT**

In the live screen, you can set the layout for each channel.

**Setting Up the Live Layout**

This section outlines how to select a series of channels based on their purpose/accessibility and monitor them in a single layout.

*Example* Layout “Lobby” - Lobby camera 1, Lobby camera 2, Front entrance camera 2
Layout “VIP” - Directors’ meeting room 1, Directors’ meeting room 2, Directors’ lounge 1, Corridor camera on the 7th floor

To create a new layout, follow these steps:

1. Open the channel layout setup menu.
2. Click *<New>*.
3. Enter a name for the selected channels (e.g., PARKING).
4. Select the channels that you want to add to the layout (e.g., 1, 2, 3, 4).
5. Choose a split mode to apply (e.g., 4-way split).
6. Click *<OK>*.
7. Choose a layout to view it on the screen (e.g., change to PARKING).

1. Select the *<New>*.
   - The layout setting screen will appear.
   - **New**: You can set the new layout.
   - **Rename**: You can make changes to the selected layout.
   - **Delete**: You can delete the selected layout.
   - **Channel Table**: You can select channels in the table to be registered in, or removed from the layout.
   - **Channel List**: You can select channels in the list to be registered in, or removed from the layout.
2. Press the *<New>* button and enter the name of layout to add.
3. In the *<Ch. Table>* or *<Channel List>*. click and select the channel to be displayed on the layout screen.
4. Click on *<OK>* to save the selected layout.

* The layout for each user is saved separately.

**ZOOM**

This is activated only in Live Single mode.

After selecting a single screen, if you use the Magnify function, the selected area will be magnified by 3.

1. In the live screen menu, select *<ZOOM>*.
   - Press the [ZOOM] button on your remote control or click *<OK>* on the launcher menu.
   - The Magnify icon in the middle of the screen will be displayed.
2. You can use the remote control’s directional key (▲▼◄►) or drag with the mouse to set the area of magnification.
3. Press the [ENTER] button or double click with the mouse to magnify the selected area by 3 times.
   * In the magnified screen, you can drag with the mouse or use the remote control’s navigational key (▲▼◄►) to move the magnified area.
4. In the live screen menu, select *<Zoom Out>*.
   - Press the [ZOOM] button on your remote control or click *<OK>* on the launcher menu to cancel the magnification function.
AUDIO ON/OFF

You can turn the sound on/off corresponding to the channel in Live mode.

**AUDIO ON/OFF in Single mode**

In the screen, click on the audio icon (לע) or in the remote control, press the [AUDIO] button to turn it on/off.

- If you have configured the audio output settings properly but the audio or voice is not output, check if the connected network camera supports the sound signal and if you have configured the sound settings as appropriate. The sound icon can be displayed if the sound signal fails to output from noise.
- Only the channel where <AUDIO> is set to <ON> in "Setting the Device > Camera" displays the audio icon (לע) in Live mode that you can use to turn the sound on/off.

FREEZE

This is available only in Live mode, this pauses playing the Live image temporarily.

1. Press the [FREEZE] button on your remote control or click < ø > in launcher mode. Video playing is paused.
2. Press the [FREEZE] button on your remote control or click < ø > in launcher mode. Pause is canceled. Playing is resumed.

EVENT MONITORING

This will display the channel in sync with a specific event (Sensor/Motion/Video Loss) if it occurs. In "Monitor > Event Display", set the event monitoring to ON/OFF and specify the event display time. (Page 39)

- If multiple events occur simultaneously, the screen will switch to a split mode.
  - 2~4 events : 4-split mode
  - 5~9 events : 9-split mode
- If the second event occurs within the set time of <Event Display>, the first event will last until the second one is terminated.
- Ex: If you set <Event Display> to 5 seconds, and only one event occurs in CH 1.

Event occurrence  5 seconds

- Ex: If you set <Event Display> to 5 seconds, and the second event occurs in CH 2 within the set time after the first event occurred in CH 1.

CAPTURE

You can capture a screen selected on the live screen. Function to perform in single channel mode on the live screen or when selecting a channel.

1. Select <Capture> from the live screen menu. You can click on < ø > in the launcher menu.
2. Select the output information to be displayed on the captured screen.
   - When you select the <Description> check box, a window to enter a description is opened and you can enter up to 50 Korean letters.
3. Select a device to save a captured file, file path and file name.
4. Complete the settings and click <OK>, then the image captured from the screen is saved to the selected device.
MAINTAIN THE SCREEN RATIO

The screen ratio for a live video can be changed.

Maintain a screen ratio for all channels

Video screen ratio for all channels can be changed in live split screen mode.

1. Select <Keep full scr ratio> from the live screen menu.
   The screen ratio for all channels will be changed.
2. If you want to go back to the previous screen ratio, check the menu option for <Keep full scr ratio>.

Maintain a channel screen ratio

If you select a channel from a live single screen or split screen, you can change its video screen ratio.

1. Select <Keep ch. scr ratio> from the live screen menu.
   The screen ratio of a specified channel will be changed.
2. If you want to go back to a previous screen ratio, select <Keep ch. scr ratio> again.

DISPLAY TEXT

Change text output

The NVR can display text on a live screen when a text device is set.

Select text output

This is executable when a text device is connected.
• How to turn the text output off: Select “OFF” from the text list.
• How to display on other devices differently from the preset device: Select a device to display from the text list.

PTZ CONTROL

With this NVR, you can configure the settings of a PTZ camera as well as commercial cameras in the market to your preference.

PTZ device

This is active only if a channel that a PTZ camera is connected to is selected.

Getting started with PTZ operations

The PTZ camera will be activated only if the channel of the PTZ camera is selected, which can be performed in the following way:
• Using the launcher menu: Click <PTZ> from the launcher menu of the Live screen.
• Using the Live screen menu: Select <PTZ Control> in the context menu of the Live screen.
• Using the icons on the Live screen: Simply click the <PTZ> icon on the Live screen.

- This is available only if a PTZ camera is connected and the <PTZ> icon is displayed on the screen.
- Even if the connected network camera does not support the PTZ operations, you can configure the PTZ control settings (if possible) by installing the PTZ driver (physical device).
- It only supports a network camera with Hanwha Techwin’s PTZ function and a camera registered in the ONVIF.
Using the PTZ camera

You can use a single PTZ camera to perform the Pan, Tilt, and Zoom operations to monitor multiple places, and configure the custom settings of the presets in a desired mode.

1. Open the <PTZ Control> menu.
   - The <PTZ Control> icon in the left bottom of the screen will turn yellow, indicating that the system accesses "PTZ Control" mode. You will see the "PTZ Control" launcher menu.
   - The PTZ working (active) mark can be active even if the PTZ operation is not available in normal mode. So ensure that you have completed the PTZ settings before proceeding.

2. Adjust the camera recording location by using the PTZ ball in the launcher menu or press the left/right (▲▼◄►) button on your remote control to move the camera recording location.
   - Sensitivity : Adjust sensitivity for Pan, Tilt controls.
   - PTZ Wheel : Click a near area from the center to move the camera lens slowly; clicking a far area will move it fast.
   - If clicking and holding the mouse in the left will turn the camera counterclockwise; if clicking and holding the mouse in the right will move the camera lens clockwise.
   - Zoom : Activate the Zoom operation of the PTZ camera.
   - Iris : Adjust the amount of light incoming to the camera.
   - Focus : You can adjust the focus manually.
   - Swing : Swing is a monitoring function that moves between two preset points and enables you to trace the motion.
   - Group : The group function enables you to group various presets before calling them in sequence.
   - Trace : Tracking remembers the trace of movements that you instructed and reproduces it for your reference.
   - Tour : Monitor all the groups created by a user in turn.
   - Some cameras may differ in the menu title and operation with regard to Swing, Group, Tour and Trace.

Using Digital PTZ (D-PTZ) function

1. Register a camera that supports the D-PTZ profile.
   - In cameras that support the D-PTZ profile, you can use the D-PTZ function.
2. Both cameras that support general PTZ and cameras that support D-PTZ can control the live image using some of the <PTZ control> function menus.
   - For more information about the supported functions, please refer to the camera manual.

Preset

Preset is a specific position remembered by the PTZ camera. You can use the Preset function to define up to 255 presets for a single PTZ camera.

To add a preset

1. Check the preset checkbox.
2. Select the preset you wish to add.
   - The virtual keyboard will appear on the screen. Use it to provide the preset name.
   - Refer to "Using Virtual Keyboard" (Page 27)
   - You can change the preset settings to your preference.
   - Delete a selected preset.
   - Delete all the existing preset settings.
   - You can add up to 255 presets, which is the max count supported by the NVR.
   - If you replace a camera that saves your preset settings with a different one, you must configure the preset settings again.
3. Select <OK>.
   - The preset setting will be saved in the provided name.

To change or delete a registered preset

1. Check the preset checkbox and select a preset to change or delete.
2. Press <▲> or <▼> as needed.
   - Delete all the existing preset settings.
   - If you delete the entire presets, the default presets specified in the network camera can be deleted accordingly.
3. Provide a new name and press <OK>. 
You can check the backup device and set the backup schedule by channel or by time.

1. Press the [BACKUP] button on the remote control, or select <Backup> from the live screen menu.
   You can click on < > in the launcher menu.
2. The backup settings screen will be opened.
   • Channel : Sets the channel to backup.
     You can select multiple channels.
     If you select <All CHs>, all channels will be selected.
   • Backup Range : Sets the <Start> and <End> time for the backup.
   • Overlapped Data : Shows a list of overlapping data on the same time according to the number of data.
     It appears when one channel has multiple data on a certain time point due to changing of time or time zone
     settings, etc.
     Refer to time and time zone of “Setting the Date/Time/Language”. (Page 26)
   • Device : Select a backup device from the recognized devices.
   • Type : Sets the backup data format.
     - NVR : Saved data can be played back only by the NVR.
     - SEC : Saves data in the proprietary format with built-in viewer, which supports immediate playback on a
       PC.
     When you select the SEC format, you can select or deselect “Password” and “Text data included”.
   • Path : displays the location of the folder in which the backup file is to be saved.
   • Check capacity : Shows the size of the selected backup data, used and available capacity of the selected
     backup device.
3. When the backup setup is done, press <OK>.
   If no available device is recognized for backup, <OK> button is not activated.

- The application may slow down during the backup.
- You can switch to the menu screen during the backup in operation, but playback of data is not available.
- The data can be played back on a Webviewer while the backup is in progress but audio does not function.
- If backup has failed, select “Device > Storage Device” and check the free space of the HDD and check also if the HDD is
  properly connected.

- Pressing the <Exit> during the backup will return to the previous menu, while the backup progresses.
You can setup the system, devices, and options for recording, event and network.

**SYSTEM SETUP**

You can setup Date/Time/Language, User, System Properties and Log.

---

**Date/Time/Language**

**Setting the Date/Time/Language**

You can check and setup the current Date/Time and time related properties, as well as the language used for the interface on the screen.

- **Date** : Sets the date and its format that will appear on the screen.
- **Time** : Sets the time and its format that will appear on the screen.
- **Time Zone** : Sets the time zone of your area based on the Greenwich Mean Time (GMT).
  - GMT (Greenwich Mean Time) is standard World Time and the basis of world time zone.
- **Time Sync.** : Specify the use of synchronization with the time server.
  - Click the <Setup> button to display time synchronization setup screen.
  - If you select to use the <Time Server>, the current time will be synchronized on a regular basis by the server defined as <Time Server>.
  - If this is the case, you cannot change the time setting manually.
  - Synchronization : Specify the use of synchronization with the time server.
  - Time Server : Enter an IP or URL address of the time server.
  - Last Sync Time : Displays the most recent synchronization time from the selected time server.
  - Activate as Server : Set to <Use> to allow the NVR to act as a Time Server for other NVRs.
- **DST** : Set up Daylight Saving Time with its period to make the time earlier than the GMT of its time zone by 1 hour during the set period.
- **Language** : Select your language. Sets the language for the interface.
  - English, French, German, Spanish, Italian, Chinese, Russian, Korean, Polish, Japanese, Dutch, Portuguese, Turkish, Czech, Danish, Swedish, Thai, Romanian, Serbian, Croatian, Hungarian, Greek, Finnish, and Norwegian are supported.

---

**Holiday** : A user can select specific dates as holidays according to their own preferences. Holidays are applied in the <Recording Schedule> or <Alarm Schedule> setting too.

- e.g. every first day of a year is set to be a holiday if you select January 1 and check <1/1>, and every first day of a year and every first Wednesday of January are set to be holidays if you check <1/1> and <Jan First Wed>.

---

**To use the calendar**

1. Select year and month.
   - Select the < > key on both ends of year and month to move back/forward to the previous-next year or previous-next three month.
2. Select a date and click on the <OK> button.
   - A date is marked in gray if there exist data for search for system log, event log, time search and event search.
User
You can set permissions of each user over the NVR’s specific function and settings.

Setting the Administrator
You can set and change Administrator’s ID and password.

The administrator can use and set all menu items and functions.

- ID : Change the admin ID.
- Password : Checks the current password.
- New P/W : Enter new password.
- Confirm P/W : Confirms the new password.

If <View password> is selected, the password will no longer be hidden on the screen when you type it.

- The initial administrator ID is set to “admin” and you will need to configure the password in the installation wizard.

- Please change your password every three months to safely protect personal information and to prevent the damage of the information theft.

- If you click <>, a basic guide for password setup is displayed.

Using Virtual Keyboard

1. For alphanumeric inputs, the virtual keyboard window appears.
2. Using the directional key(▲▼◄►), move to the desired text tab and press the [ENTER] button.
3. In the upper text input box of the virtual keyboard, there displays a list of candidate words containing the selected character.
4. Select a word from the list, or use the keyboard to enter the whole word.
   - If there are many of candidate words, use <▲▼◄►> buttons to move between them forward and backward.
5. Select <OK>.
   - Entered word is applied.
   - For upper case letters, use <Caps Lock> button.
   - For special characters, use <Shift> button.
   - Using the virtual keyboard is the same to a normal keyboard use in your region.
   - ID allows alphanumeric characters only.
   - The password should at a minimum be an 8-digit combination of alphabetical letters and numbers.

User setting
You can create a group or set permissions for each group.
You can add a user and edit the registered user information.

If you want to add a group
1. Click on the [ ] button to launch the Group Addition popup window.
2. Press the group name item to launch the virtual keyboard used to enter group names.

If you want to set group permission
Set permission to access each group.
Each group’s users can only access items with a check mark beside them.

1. Select the menu to set group permissions.
   - The menu with access permissions will appear when a user of the group logs in.
   - Live View : You can set permissions to access the live screen for each channel.
   - Search : You can set permissions to access the search menu for each channel.
   - Backup : You can set permissions to access the backup menu for each channel.
   - Menu : You can select and set the setting menu that can be accessed. A group user can only access the menu selected. If you select the menu, the menu permission setting screen will be displayed.
   - Record Stop, PTZ, Remote Alarm Out, Shutdown : You can select these functions to add to a group’s permissions.
2. Click <OK>.
   - Check a group user to give them the permission to access the selected item.
If you want to register a user

1. Click on the [ ] button to launch the user addition popup window.
   To add a user, click on <OK>.
2. Select a group.
   - When registering a user, the selected group will be automatically registered.
   - A group can be changed after inputting all required information.
3. Enter name, ID, password and select whether to use the viewer.
   - If you activate use of <Viewer>, you will have the right to use the web viewer and the network viewer.
4. Click <OK>.
   - Registered user information will be saved.

When you want to delete the group and user information

1. To delete, click on the [ ] button.
2. The deletion confirmation window will appear and you can select an item to delete and click on <Delete>.

Setting Permissions

You can set restricted access for all general users.
Items with restrictions will require logging in for use.

1. Restricted Access: All menu items allowed for a user can be set with restricted access.
   - Checked ( ): Restricted
   - Not checked ( ): Accessible
   - If it is not checked ( ) in <Restricted Access>, any user can access the item no matter what the <Permission> setting.
   - If it is checked ( ) in <Restricted Access>, a user can access the item only if the user has permission in <Permission> setting.
2. Restriction on Network Access: Restricts remote access from a <Restricted Access> network.
   - All Network: Restricts all access instances via Network Viewer and Web Viewer.
   - Web Viewer: Restricts access via the Web Viewer.
3. Auto Log out: A user will be automatically logged out if there is no operation on NVR for over set period of time.
4. Manual Input of ID: In the login window, select whether to enter ID.
If the user has restricted access

If a new group is restricted to access the entire menus, the users belonging to the group can access only the basic menus and can change only their respective password.
If all permissions are restricted, you will see only some menu items accessible in the Live screen menu.

To change the user password

If you log in with the user account of a group with restricted access, you just can change your own password.

1. Provide the login information.
2. Select <User Menu>.
   The Permission Management screen appears.
   The Password dialog shall appear.
4. Provide a new password.
5. Select <OK>.
   The old password will be changed to a new one.

System Management

You can check the system version, update to a newer version, as well as data backup and initialization.

Checking the System Information

You can check the current software version and MAC address before proceeding with the upgrade.

- System Information : Shows the current system’s information.
  The values cannot be changed by a user.
- Software Upgrade : Updates the NVR’s software up to date.
  - Press the <Menu> button to search for and display the equipment to upgrade.
  - Device Name : Displayed if the network viewer is connected to NVR.

To upgrade the current software version

1. Connect a device storing the software to be updated.
   - It may take about 10 seconds to recognize the device.
   - Upgradeable devices include USB memory, and network device.
   - To update the network, the current NVR should have been connected to the network.
     Upgrade via the proxy server may not be enabled due to the restricted access.
2. Select <System Management> from <System> window.
3. Select <System Information>.
4. When the recognized device appears, select <Upgrade>.
   - If you connect a device in the upgrade menu window, you can press the <Upgrade> button to search for available software.
   - If there is an upgrade image on the network, the popup window will appear.
   - The <Upgrade> button will be activated only if the current <Software Version> of the <System Information> is same to or older than that of <SW Upgrade>.

5. Press <OK> in the "S/W Upgrade" window.
   - While updating, it shows the progress.

6. When the updating is done, it automatically restarts.
   Do not turn the power off until it finishes restarting.

   If "Upgrade Failed" appears, retry from the step 4.
   When you experience continued failure, consult the service center for assistance.

Settings
You can copy and import the NVR settings by using a storage media.

| MENU | ENTER |▼ | Menu | ENTER |▼ | System | ENTER |▼ | System Management | ENTER |▼ | Settings | ENTER |▼ |► |► |► |► |

- Storage Device : Shows the connected storage device.
  - Press the <Export> button to view the list of storage devices.
- Export : Exports NVR settings to the connected storage device.
- Import : Imports NVR settings from the storage device and applies to the NVR.
  - Uncheck the checkbox of an item(s) that you want to import.
  - Only the other items than the selected one will be applied to the NVR.
  - You cannot retrieve the configuration file from another mode. In other words, in PnP mode, you cannot retrieve the manual setting information. In manual setting mode, you cannot retrieve the PnP setting information.
- <Export> and <Import> settings should be used in the same software version.

- Load Factory Default : Restore the factory default settings of NVR.
  Uncheck the checkbox of an item(s) that you want to reset. Then, only the other items than the selected one will return to the factory default.
  If <Initialization> is selected, a confirmation dialog for "Load Factory Default" prompts. Press <OK> to initialize the system to the factory default.
  - After changing the mode, reboot to initialize. (PnP mode <-> Manual Setup Mode)
- Power off : If the power is off, the first alarm is generated. After checking the checkbox, if the <Apply> button is pressed, all event alarms that are set to the first alarm output are released, and then the first alarm cannot be selected by other alarm output.
  - If that function is set, the first alarm-out checkbox and all alarms in the alarm setup screen are deactivated, to Off.

  If you want to initialize the <Authority Setting>, you need to reset the password.
  In case you reboot, reset it the Installation Wizard and if not, use the guide screen to reset it.

Log Information
You can browse logs on the system and events.

Checking the system log
System Log shows log and timestamp on every system start up, system shutdown, and changes on system settings.

| MENU | ENTER |▼ | Menu | ENTER |▼ | System | ENTER |▼ | System Management | ENTER |▼ | Log Information | ENTER |

- Search Day : Click the Calendar icon to display the calendar window, or use the direction buttons to specify the search period of the system log.
  - For using the calendar, refer to "To use the calendar". (Page 26)
- Search : Specify the date and press this button to display the search result in the log list.
- Type : When there are too many logs, you can display logs of the desired format by selecting the type.
- Export : Save all the logged information recorded in the NVR into the storage media.
Checking the event log

You can search recorded events including alarms, camera events and video loss. It also shows the log and its timestamp.

[MENU] ⇒ [ENTER] ⇒ ▼ ⇒ <Menu> ⇒ [ENTER] ⇒ <System> ⇒ ▶⇒ <Log Information> ⇒ [ENTER] ⇒ ▼⇒ <Event Log> ⇒ [ENTER] ⇒ ▲⇒ [ENTER]

• Search Day : Click the Calendar icon to display the calendar window, or use the direction buttons to specify the search period of the system log.
  □ For using the calendar, refer to "To use the calendar". (Page 26)

• Search : Specify the date and press this button to display the search result in the log list.

• Type : When there are too many logs, you can display logs of the desired format by selecting the type.

• Export : Save all the logged information recorded in the NVR into the storage media.

Checking the backup log

You can find out who backed up and the details (backup time, channel, device to use, file format, etc.).

[MENU] ⇒ [ENTER] ⇒ ▼ ⇒ <Menu> ⇒ [ENTER] ⇒ <System> ⇒ ▶⇒ <Log Information> ⇒ [ENTER] ⇒ ▼⇒ <Backup Log> ⇒ [ENTER] ⇒ ▲⇒ [ENTER]

• Search Day : Click the Calendar icon to display the calendar window, or use the direction buttons to specify the search period of the system log.
  □ For using the calendar, refer to "To use the calendar". (Page 26)

• Search : Specify the date and press this button to display the search result in the log list.

SETTING THE DEVICE

You can configure settings related to camera, storage media, monitor and text.

Camera

To register a camera

You can register a network camera for each channel and make connection between.

[MENU] ⇒ [ENTER] ⇒ ▼ ⇒ <Menu> ⇒ [ENTER] ⇒ ▼ ⇒ <System> ⇒ ▶ ⇒ <Device> ⇒ ▶ ⇒ <Camera> ⇒ [ENTER] ⇒ ▼ ⇒ <Cam Registration> ⇒ ▲⇒ [ENTER]

• Preview : View the video of the channel as a current image.
  □ Camera searched with ONVIF does not provide previews.

• Protocol : Show the protocol information of a registered network camera.

• Model : Show the camera model name.

• IP Address : Display the IP address of a network camera.

• Connection : Display the connection status.

• Data Rate : Displays the total amount of data received by the channel.

• PoE Status : Displays connected PoE status information.

• ONVIF Setup : You can additionally set up ONVIF protocol camera.

• Error code guides : You can check the details of generated error codes.

□ If the NVR has been initialized, it may not connect to cameras. Configure the network settings first and add cameras.

For more information on network settings, refer to "Network Configuration". (Page 44)
5. Click on the <ID/PW> button to enter the selected network camera’s <ID> and <Password>.
6. Press the <Connection Test> button to make a connection to a camera.
7. Press <Register> to register the selected camera.

To manually search for and register a network camera

1. In the <Cam Registration> menu, click on the <Manual> button.
2. The manual search window will appear.
3. Select a channel and protocol used to connect to a camera. The input items may differ depending on the selected protocol.
   • SAMSUNG: Comply with the internal network protocols adopted by Hanwha Techwin.
   • ONVIF: Means the camera supports ONVIF protocols. When connecting a camera that its name cannot be found from the list, select <ONVIF>.
   • RTSP: Comply with RFC 2326. Means the camera supports RTSP for real-time streaming.

4. If you select the <SAMSUNG> protocol, check options as necessary.
   • Model: Select a camera model.
      - Samsung Network Camera/Encoder: Means the camera/encoder supports Hanwha Techwin’s SUNAPI, SVNP protocol. When connecting a camera that does not appear in the camera list, select Samsung Network Camera/Encoder.
      • However, you must select the correct model name of the camera, if it’s in the list. Some of obsolete camera models may not be supported.
      • The below models are discontinued. If you register them with ONVIF, some camera functions will be restricted or cause errors. It is recommended you register the Samsung protocol.

To auto-search for and register a network camera

1. In the <Cam Registration> field, click on the <Auto> button.
2. Search for a network camera connected.
   • An already registered camera will be marked in blue in the list.
   • If you search for the camera again or if the IP is an old IP that was not assigned by the DHCP server (such as -192.168.1.100), then press the <Refresh> button to check if a new IP has been assigned. If the IP is still the same, then select Assign IP to assign the IP manually.
3. Select a camera from the camera list to see a preview of its current video feed.
   • Camera searched with ONVIF does not provide previews.
4. Check the checkbox next to a network camera that you want to connect to.
   • You can select all of the network cameras in the list and provide <ID> and <Password> all at once.
   • Click a header at the top of the list to sort the list according to that header.

Registering camera with user account other than admin may restrict camera function.
- When you change the camera ID/password in the camera web viewer, if the camera is already registered in NVR, you also have to change the camera ID/password information registered in NVR.
• Address type : Select an address type of the camera.
  - Address type can be different depending on connected product model.
    - Static(IPv4)/Static(IPv6) : Used to provide the IP address of the camera manually.
    - Wisenet DDNS : This is available only if the camera is registered with the Wisenet DDNS(ddns.hanwhasecurity.com) server. Provide the registered domain for DDNS ID.
      - Ex) http://ddns.hanwha-security.com/snb5000 -> provide “snb5000” for Wisenet DDNS
    - URL : Used for URL address input.
  - Refer to the user manual of the connected camera and check the DDNS specification that is supported by the camera.

• IP Address : Provide the IP address of the camera.
• Device Port : Provide the device port of the camera.
• HTTP Port : Provide the HTTP port of the camera.
• ID : Provide the ID of the camera that you want to register.
• Password : Enter the password of the camera to be registered.

5. Select <ONVIF> or <RTSP> for the protocol and enter your input for each field appears.
• ONVIF Address / RTSP URL : Enter the camera’s RTSP access address that supports ONVIF or RTSP.
  For more information about the RTSP address, refer to the manual of each applicable network camera.
• ID : Enter the ID for accessing via ONVIF/RTSP protocol.
• Password : Enter the password for accessing via ONVIF/RTSP protocol.

5. Mode : If <More Detail> button clicked, setup window will appear. Select a mode that is supported by the network camera in RTSP connection mode.
  - TCP : The connection type with the network camera will switch to "RTP over TCP".
  - UDP : The connection type with the network camera will switch to "RTP over UDP".
  - HTTP : The connection type with the network camera will switch to "RTP over TCP (HTTP)".
  - HTTPS : The connection type with the network camera will switch to "RTP over TCP (HTTPS)".

If you want to check the error details of camera registration
If you failed to register a camera, the reason for the failure will be displayed.
• Connection failed due to unknown error. : This message appears if the camera has failed to be registered due to unknown connection status.
• Due to the camera account locking, access has failed. : When you enter a wrong ID/password 5 times to login to the camera account, this message is displayed.
  Try to log in again after 30 seconds. If the same message appears, you may need to check whether someone has tried to access your camera account from the outside.
• Connected successfully. : This message appears if the camera is connected successfully.
• Incorrect model information. Provide the correct model information. : This message appears if the model information provided for registering the camera is incorrect.
• Authentication has failed : This message appears if the ID or password provided for registering the camera is incorrect.
• Connection has failed due to excessive concurrent users. : This message appears if the concurrent user count exceeds the upper limit.
• Connection has failed due to incorrect HTTP port information. : This message appears if the HTTP port number of the camera is invalid.
• Connection has failed. Unknown connection status. : This message appears if the camera has failed to be connected due to an unknown error.
• User Model Modification : When registering a new camera, it is named according to the device’s default if user set the model to <Samsung Network Camera/Encoder>. In case if automatic registration fails, user can change the model name of camera to be registered.

To edit camera profile
When a camera is added for the first time, it is added as the default profile of H.264, H.265 and MJPEG in order temporarily.
To change its profile, refer to ’Setting the network camera’s recording profile’ (Page 41) or “Live Setting” (Page 36).

- In case of NVR, if you set 3 different profiles for live, recording and network profile, one camera will produce video streams accordingly, having different stream formats. Especially, note that the live profile may vary depending on the used screen split mode.
  - For cameras, if applied with one profile only, the produced frame rate is fixed as the profile specifies; if applied with multiple profiles, produced video stream’s frame rate is not guaranteed. For example, if applied with 2 profiles of 30fps, the camera may transmit streams at 20fps.
ONVIF Setup

In the bottom of the camera addition screen, click on the <ONVIF Setup> button to set additional settings for cameras with the ONVIF protocol.

- You can change the information only if the user account (camera account used for camera registration) is used to read the user information and a connection is made with the admin privilege.

Profile

- CH : It shows the list of registered camera with the ONVIF setting.
- Add Profile : You can add camera profile.
  After adding a profile, click on the <OK> button to add it to the list.
- Delete : After selecting the profile to delete, click on the <Delete> button to delete the selected profile.
- Profile information : You can set the details of the selected profile.
  After finishing setting each item, click on the <OK> button to save changes.

User

- Add User : You can add a camera user.
  After adding a user, click on the <OK> button to add them to the list.
- Delete : After selecting the user to delete, click on the <Delete> button to delete the selected user.
- User Information : You can set the details of the selected user.

Network

You can set the details of the network.

- IP Type : Select from either the IPv4/IPv6 IP types.
- DHCP : Select whether to use the DHCP.
- DNS / NTP Server : Only if the DHCP setting is <ON>, the DHCP checkbox will be activated.
  - If the DHCP is checked, you can manually enter the IP address.

Camera Setting

You can change the video settings of a registered network camera for each channel.

- Add : You can add camera profile. Click on the Add button to launch the addition window.
  Enter the information and click on the <OK> button to add it to the list.
- Delete : You can delete the selected profile from the list.
- Select Camera : Select the camera channel to change the video transmission settings.
- Profile : Show a video profile for the connected camera.
- Codec : Show the codec information for the selected profile.
- Resolution : You can change the resolution of the selected profile.
- Frame Rate : You can change the baud rate of the selected profile.
- Bitrate Control : You can change the bit rate for video transmission of the selected profile.
If you change the settings of a specific profile for each model, the effective range of the baud rate may be changed accordingly. Ex: if you set the baud rate of the first profile to 30fps, the send rate of the second profile will be changed to 15fps.

Menu options other than codec, resolution and transmission rate can be configured in the settings menu of the network camera.

If you change the current profile settings, you may encounter an interrupted playback on the recording or live screen for a certain time.

Changes made in Camera Setup page are applied immediately, while changes made through the camera’s web page may require up to 3 minutes.

Setup

In the bottom of the camera setting screen, press the <Setup> button to set your camera while watching the live video of the selected camera.

SUNAPI (Samsung Unified Network API) : Camera that supports the communication protocols provided by Hanwha Techwin
1. Camera supporting SUNAPI.
2. A camera connected with admin privileges.
3. A camera connected to Samsung protocols.

In the above cases, you can use the function.

For more details on camera settings, refer to the camera user manual.

This function is not supported in some models.

SSDR

If there is a significant difference between the dark and the bright areas, increase the brightness of the dark areas to maintain the level of brightness of the entire area.

Mode, level, D-Range can be set.

Backlight

You can view both bright and dark areas.

Mode, WDR level, WDR black/white levels can be set.

Exposure

You can adjust the exposure of your camera.

Brightness control, shutter, SSNR, Sens-up, shutter/lens, and gains can be set.

Day/Night

You can change the mode to adjust the color and contrast.

Mode, switching time, brightness change, alarm time, alarm input/output, negative color, daytime/nighttime switching and simple focus, and activation time can be set.

Special

DIS (shaking compensation), use of Defog levels can be set.

Focus

You can adjust the focus of your camera’s video.

Items of Simple Focus and Focus-Initialize Setting can be set.

Flip

Mirror and flip modes can be set.

After finishing with setting camera, click on the <Close> button to move back to the previous screen.

Dewarping Setup

Press <Dewarping Setup> at the bottom of the camera settings screen and a distortion correction settings window for each channel is prompted.

- Profile/View type : You can select the view type of profiles, except for fixed profiles (SourceMJPEG, SourceH264, DewarpMJPEG, DewarpH264) whose settings can’t be changed, in the profile list on the distortion correction settings pop-up window.

- Mounting mode : You can change the fisheye installation type. You can select a view mode from among CEILING/GROUND/WALL depending on the installation location.

- View : You can change the fisheye view mode of the current screen according to each split section.

If there is no camera registered in the NVR that supports fisheye view, <Dewarping Setup> will not be available.
Setting Camera Password

You can change the passwords of all registered cameras at once.

- New P/W : Input a new password according to the password setting rules.
- Confirm P/W : Input the new password again.
- If you click < or >, a basic guide for password setup is displayed.
- If <View password> is selected, the password is no longer hidden on the screen when you type it.
- A camera password registered with ONVIF and RTSP cannot be changed.

Password setting guide

The length and limitations of a password are as follows.
- Uppercase letters/lowercase letters/numbers/special characters, containing at least 3 out of the 4 character types mentioned: 8 or 9 digit combination
- Uppercase letters/lowercase letters/numbers/special characters, containing at least 2 out of the 4 character types mentioned: 10 to 15 digit combination
- The password shall not be identical to the user ID.
- To enhance security, it is not recommended to use repeated digits or letters, or keyboard patterns as a password.
- Special characters accepted for a password : ^!@#$%^&*()_-+=|{}[].?/

Live Setting

You can change the live transfer settings of the network camera.

- Live Replacement : You can select the live profile setup mode.
  - Auto : In case of split mode, the profile for live monitoring shows the Live4NVR profile (basic: H.264 800*600 30fps) created at the time of registration and it automatically selects the second profile in case of single mode.
  - Manual : Live monitoring is performed with the profile selected by the user from the registered camera profiles.
  - Record : Live monitoring is performed with the profile set for recording.
- Profile : You can select the video profile of the connected camera setting.
- Codec : Show the codec of the selected recording profile.
- Resolution : Show the resolution of the selected profile.
- Frame Rate : Show the frame rate of the selected profile.
Channel Setting

You can configure the video settings for each channel.

- **Apply to CH**: If you select **Apply to CH**, the "Apply to CH" confirmation window will appear. After selecting channels that the settings will be applied to, click on **OK** to apply them to the selected channels.

- **Video**
  - **ON/OFF** : You can turn ON/OFF the selected channel's camera.
  - **Covert1** : Shows information other than the video of the selected channel. For privacy protection, it does not display the video while the recording continues.
  - **Covert2** : Shows nothing but an empty screen while the recording continues.

- **Audio**
  - If the channel is set to **Covert1** or **Covert2** mode, the channel's sound is not hearable. However, the channel's sound is recorded if its Audio setting is set to **ON**, even the sound is not heard in Live mode.

- **Camera Name** : Provide a camera Name.
  - You can enter up to 15 characters including space.

Storage Device

You can check information on storage devices.

Device/Format

You can check storage devices and their capacity, usage as well as status. HDD, USB (memory or HDD) can be connected as a storage device.

- **Storage Status** : Displays the working status of a storage device.
  - Red : Displays the situation of video loss.
  - Green : Displays the normal situation without video recording losses.
  - Status
    - Full BPS : Displays the current rate of recording.
    - Current Loss Rate : Displays the current recording loss rate.
    - Max Loss Amount : Displays the maximum amount of losses up until now.
  - If the recording loss persists, please refer to the "Troubleshooting" in order to perform checks. (Page 82)

- **No.** : You can check the designated number for the built-in HDD.
  - If you want to find out about the location corresponding to the HDD number, refer to the **HDD Map**. (XRN-410S no HDD map)

- **Capacity** : Displays the amount of storage device use and the full capacity.

- **Usage** : Designate the purpose of use for a storage device. (However, only the display function is available for ARB)
  - If the state of use is in "Not Defined", format the HDD before use.

- **Status** : Displays the current working condition of a storage device.
  - Normal : It is displayed during normal operation.
  - Inspection : Operating with partial problems.
  - Replacement : It is displayed when you can no longer use it.
Temperature : You can check the temperature of the HDD mounted in the NVR.

Time : Displays the use time of an HDD.

Format : Select a device and click on format after which a format confirmation window appears. Click on the <OK> button to format the selected storage device.

Formatting will delete all the recording data that has been saved. Be careful.

While formatting is ongoing, you cannot record video.

Do not remove a formatting device until it is finished.

After installing an HDD, if the state of use of the HDD is "Not Defined", format the HDD before use. (If the warning message persists after formatting, replace the HDD with a new one)

ARB : Video that was not recorded due to a camera disconnection can be backed up after the connection with the camera is re-established. Press the button and an <Auto Recovery Backup> window is opened.

- For ARB storage : Select a storage device to be set to ARB.
- Select ARB channel : Select a channel to run the ARB.
  - You can select multiple channels.
    - If you select <All CHs>, all channels will be selected.
  - ARB bandwidth : Select a bandwidth for the ARB function.

Only our camera products (SUNAPI version 2.3.2 or higher) support the ARB function. To use this function, the camera will need to record video on the SD card.

The maximum bit rate value for the profile used in camera SD card recording should be set to under 6144kbps. The detailed information on how to set the profile for SD card recording can be found in the camera manual.

To use the ARB function correctly, both the camera and NVR should be time synchronized with the time server. (Page 26)

ARB function is activated when NVR starts/when the channel camera set is reconnected/when an NVR recording missing section recurs at regular intervals after NVR starts.

NVR recording missing section that can be restored with the ARB function is for 24 hours backwards from the point when the ARB function is activated.

You can check which channels have ARB function activated through the message on each channel screen that is displayed when selecting a channel. (Page 19)

- Alarm
  - If <All> was selected, both beep sound and alarm signal through rear side ports will output.
  - If <BEEP> was selected, a beep will sound.
  - Alarm signal will output through the alarm out port on the rear side when selected <1>, <2>, <3>.
  - Check Alarm Output Port : If HDD generates check alarm, the alarm signal will output to the specified alarm output port.
  - Replace Alarm Output Port : If HDD generates replace alarm, the alarm signal will output to the specified alarm output port.
  - Duration : Sets the alarm duration for the alarm signal and beep sound.

HDD Alarm Setting

For HDD malfunctions, you can set the inspection alarm output terminal, the replacement alarm output terminal and the alarm time.

Check Alarm Output Port : If HDD generates check alarm, the alarm signal will output to the specified alarm output port.

Replace Alarm Output Port : If HDD generates replace alarm, the alarm signal will output to the specified alarm output port.

Duration : Sets the alarm duration for the alarm signal and beep sound.

- <Check> status means that the HDD is operating but it has problems that require technical examination. ( ) appears on the Live screen.
- <Replace> status means that the HDD has defect and requires immediate replacement. ( ) appears on the Live screen.

HDD Map : You can check the location according to the assigned number for the HDDs installed inside. (XRN-810S)

Refer to this when servicing or installing an additional HDD.

Do not add or remove an HDD while NVR is running.
Remote Devices

You can adjust the ID for a remote control to be used in connection with NVR.

- Remote control: Select whether to use a remote control.
- ID: Select an ID number linked to a camera. If the remote control ID does not match, it will not operate properly.

* To change the remote control ID, refer to “Changing the Remote Control ID” (Page 8)

Monitor

You can set the information displayed on the monitor as well as the output system.

Monitor settings

You can configure the monitor output-related settings including the displayed information, dwell time and output system.

- Event Display: Sets the dwell time of the event channel display on the monitor when an event occurs. If you set <Continuous>, it will keep displaying until you cancel it.
- Display: Displays only checked items on the monitor screen.
- Sequence switching time: Set the automatic switching time for the segmented screen in live mode.
- Video Output: Set the resolution for the video output. If you press the [STOP] ➔ [ZOOM] ➔ [STOP] ➔ [ZOOM] ➔ [MENU] button on your remote control, the basic resolution pop up will appear. You can adjust the desired resolution in it.

* If the changed resolution is not supported by the monitor, the video may not be displayed properly. If this is the case, the screen will restore the default resolution after a certain time. Then, you can change it to a different resolution.

To adjust the display position

Some monitors many not display information (camera name, icon, time information, etc.) about the NVR, depending on the condition. Then, you can change the display position of the data.

1. From the monitor setup menu, select <Display Position Setup>.
2. Using the number button to adjust the screen that is cut off.
3. Press <OK>.

* If you operate at 60Hz with 4K resolution, the screen may not be able to display. Please check whether your TV supports 30Hz.

\[ MENU \] ➔ [ENTER] ➔ ▼ ➔ <Menu> ➔ [ENTER] ➔ ▼ ➔ <Device> ➔ ▸ ➔ <Remote Device> ➔ [ENTER] ➔ ▲▼◄► ➔ [ENTER]
Menu Setup

Device and events can be set up.

Device Settings
Relevant values of a device connected to NVR can be set.

- Device: Enter the user’s desired name
- Use: Select whether or not to use
- CH: Select a channel to add a device from a channel table.
- Port: Display a port number that is set
- Encoding type: Select an encoding type to use from a list.
  - You can select starting and ending character strings.

General characters, special characters, and Hex codes (e.g. 0x12, 0x34) can be used for character strings.

Equipment connected to NVR uses TCP/IP communication protocol.

Event Settings
You can set up event keywords.

- Total amount: Set a total amount condition to receive alarms.
- Keyword: If the <Add> button is clicked, a screen to add keywords pops up. If you select one of the added keywords to delete and click the <Delete> button, the selected keyword will be deleted.

Setting the Recording
You can setup scheduled recording, event recording and other recording related settings.

Recording Schedule
Make your reservation on a date and time to schedule the recording on specified time.

- All: The entire time range (Monday through Sunday including holidays, AM 0~PM 23) will be reserved with the same recording schedule
- Apply to CH: If you select <Apply to CH>, the "Apply to CH" confirmation pop-up window will appear. After selecting channels that the settings will be applied to, click on <OK> to apply them to the selected channels.

Event recording and scheduled recording starts about 3 seconds prior to the event/schedule for guaranteed recording.
Record setting by the color

<table>
<thead>
<tr>
<th>Color</th>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>No Color</td>
<td>No Recording</td>
<td>No schedule / event recording</td>
</tr>
<tr>
<td>Green</td>
<td>Continuous</td>
<td>Scheduled recording only</td>
</tr>
<tr>
<td>Orange</td>
<td>Event</td>
<td>Event recording only</td>
</tr>
<tr>
<td>White</td>
<td>Both(Cont&amp;Evnt)</td>
<td>Both scheduled / event recordings</td>
</tr>
</tbody>
</table>

Each press of a selected cell will cycle through <No Recording>--><Continuous>--><Event>--><Both(Cont&Evnt)>.

Record Setting

You can set resolution, IPS, and quality of recordings by channel, and by recording type of standard / event. You can check frame rates and data transfer amount of Full Frame and Key Frame recordings for each channel, and set the transfer limit for recordings.

Setting the network camera's recording profile

You can configure the video profile settings for instructing the network camera (connected to each channel) to make recording.

- Event : When an event occurs, you can set which point you will start or stop recording.
  - Pre : When an event occurs, recording will be started regardless of the time set. If you set it to five seconds, recording will start at five seconds before an event occurs.
  - Post : When an event occurs, recording will continue after the time set. If you set it to five seconds, recording will continue for a further five seconds after an event is finished.
- Audio : Specify whether to record the sound received from the camera or not.

- If a channel's data transfer exceeds defined allowed limit, then it may affect to other channels, and may force switching to <KEY> recording even when the channel is configured to <FULL> recording mode. For Key Frame recording channels, the icon for limited recording appears on the live screen's top side. But if the sum of the limits is below the max limit, you can still receive the entire frames despite exceeding the permitted bitrates for each channel.
- A channel displayed in yellow indicates that the recorded data is not being transferred from the camera and that the recording is being performed temporarily using another profile on the camera.
  - Check the channel information to see the applied profile to the channel listed in yellow.
  - A channel displayed in yellow indicates that the amount of inputted data is greater than the permitted data amount. In this case, it is impossible to record all of the incoming frames. Instead, only part of the frames (1 or 2 frames per second) can be recorded. To resolve this issue, you must set the permitted data amount to be greater than the amount of inputted data. Refer to notes on "Record status". (Page 20)

- You can configure the settings only for the profiles that are supported by the camera.
  - If the profiles used for recording and network are different, camera's video feed may not comply with the frame rate as specified in the camera.
- Profile : Select a record profile for the connected camera.
- Codec : Show the codec information for the selected record profile.
- Resolution : Display the resolution for the selected record profile.
- Frame Rate : Display the baud rate for the selected record profile.
Record Option

When the HDD capacity is full, you can set whether to stop recording or start overwriting.

- Disk End Mode: Select a HDD repetitive recording type.
  - Overwrite: If the HDD is full, this will overwrite the existing data and keep recording.
  - Stop: If the HDD is full, this will stop recording automatically.
- Disk End Beep: If you select <Stop> for the disk end mode, this button will be active. Specify the use of beep when the HDD recording ends. If you check it, the beep will sound on the disk full and the recording stops.
- Auto Delete: If you check this option, the period list box is active. Specify the deletion period to delete any earlier data than the specified date. However, you can search for data from the current time to the selected date.
  - You can select a channel and set a different recording duration for each channel.
- Apply to CH: If you select <Apply to CH>, a confirmation dialog window is opened. Select a channel to apply the applicable settings then press <OK>. The settings will be applied to the selected channel.

• If you press <OK> when you have completed your settings, all the existing data earlier than the specified period will be deleted automatically. So it is recommend to backup the previous data if necessary for later use.

SETTING THE EVENT

You can make the setup for record in case of sensor detection, camera event or video loss detection.

Sensor Detection

You can set the sensor’s operating condition and connected camera, as well as alarm output and its duration.

- Apply to other sensors: If you select <Apply to other sensors>, the "Apply to other sensors" confirmation window will appear. After selecting channels that the settings will be applied to, click on <OK> to apply them to the selected channels.
- Sensor Operation: Sets the operation mode of sensors.
  - <N.O (Normal Open)>: Sensor is opened. If the sensor is closed, it generates alarm.
  - <N.C (Normal Close)>: Sensor is closed. If the sensor is open, it generates alarm.
- Cam: Select a channel to be connected to the sensor. If selected camera, "Cam Preset setup" window appears. Select a channel and setup the preset.
  - Preset setup can be done in PTZ mode.
- Alarm out: Sets the alarm output method.
  - For further information on alarm output, refer to "HDD Alarm > Alarm". (Page 38)
- Duration: Sets the duration of alarm signal and alarm sound.

• If you select <Camera> tab, you can configure the sensor operation settings of the network camera connected to each channel.
  - If the connected network camera that has configured the alarm in/out settings triggers an alarm, NVR will perform the alarm out.
**Camera Event**

You can set the activation of events (motion detection, video analysis, audio event) sent from the camera, alarm output method and alarm time.

- **Apply to CH**: If you select <Apply to CH>, the "Apply to CH" confirmation window will appear. After selecting channels that the settings will be applied to, click on <OK> to apply them to the selected channels.
- **Camera Event**: Select whether to use an event detection.
- **MD**: Select whether or not to use motion detection from camera.
- **Smart Search**: Enables or disables the Smart Search option.
  - To use the smart search function, the smart search option must be set to <ON>. Refer to "Smart Search" (page 52).
- **Cam**: Select an event detection channel. If you select a camera item, the "Camera preset" screen will appear. Select a channel to connect and set the preset.
  - You can set the preset in PTZ mode.
- **Alarm**: Select the method for alarm output.
  - For more details, refer to "HDD alarm > Alarm". (Page 38)
- **Alarm Duration**: Specify the duration of the alarm output with the beep.
- **Camera MD**: You can set the detailed setting of motion detection for a network camera connected.

- Mode: Set the motion detection mode.
- Area: Click on <Setup> and when the detailed setup menu appears, set the motion detection area.
- Sensitivity: Set the sensitivity for motion detection. (very low/low/medium/high/very high).
- Size: Click on <Setup>. When the detailed setup menu appears, set the max/min size of the object to be detected.
- Activation Time: Select the operation time of motion detection.

After finishing with setup, click on the <OK> button to move back to the previous screen after saving the setup.

**Video Loss Detection**

You can set the camera so that the camera can trigger the alarm if it is disconnected or the video is lost due to unstable network connection.

- **Apply to CH**: If you select <Apply to CH>, the "Apply to CH" confirmation window will appear. After selecting channels that the settings will be applied to, click on <OK> to apply them to the selected channels.
- **Video Loss State**: Specify the use of video loss detection.
- **Alarm Out**: Select an alarm output method.
  - For further information on alarm output, refer to "HDD Alarm > Alarm". (Page 38)
- **Alarm Duration**: Specify the duration of the alarm output with the beep.
**Alarm Out Schedule**

You can set the conditions and operating hours for scheduled alarms.

- **Alarm Out**: Sets the alarm output method.
  - **ON**: Marked in green, and always generates alarm on scheduled time.
  - **OFF**: Marked in black, no alarm is generated even if an event occurs.
  - **Event Sync**: Marked in orange, generates alarm only when an event occurs.
- **Apply to All Alarm out**: Applies the configured schedule to all alarms.

- When the alarm is generated on the scheduled time, you can stop the alarm by canceling the schedule.

- For further information on alarm output, refer to "HDD Alarm > Alarm". (Page 38)

**Network Configuration**

It provides networked monitoring of Live screen from a remote place, and supports mail forwarding function with events. You can configure the network environment which enables such functions.

**Interface**

You can set the network connection route and protocol.

**Setting a network connection**

Sets the protocol and environment of the network.

- **Network 1 (Camera)**: Port recommended for camera connection, which receives an image from the camera.
- **Network 2 (All)**: Port recommended for connection with a network, web viewer.
- **Network 1 (Camera) / Network 2 (All) setup**
  - **IP Type**: Select a network connection type.
    - **Static**: You can manually enter IP address, subnet mask, gateway and DNS.
    - **DHCP**: IP address, subnet mask and gateway values will be automatically set.
    - **PPPoE**: IP address, subnet mask and gateway values will be automatically set.
  - **User ID, Password**: If you set the connection mode to PPPoE, you need to enter “User ID” and “Password” to register in PPPoE.
  - **Transfer bandwidth**: Enter the maximum amount of upload data bandwidth. Check the assigned setting in Connection Mode before entering your value.
  - **Default Gateway**: Set the basic gateway by using Network1 / Network2 setup.

- You can manually input DNS of **<DHCP>** and **<PPPoE>** when it selected to <Manual>. 

44_ menu setup
Connecting and Setting the Network

Networking may differ from the connection method, check your environment before setting the connection mode.

When no router is used

- **Static mode**
  - Internet connection: Static IP, leased line, and LAN environments allows connection between the NVR and remote user.
  - NVR Network Settings: Set the `<Network>` in `<Interface>` menu of the connected NVR to `<Static>`.

  - Consult your network manager for IP, Gateway and Subnet Mask.

- **DHCP mode**
  - Internet connection: Connect the NVR directly to a cable modem, DHCP ADSL modem or FTTH network.
  - NVR Network Settings: Set the `<Network>` in `<Interface>` menu of the connected NVR to `<DHCP>`.

- **PPPoE**
  - Internet connection: An PPPoE modem is directly connected to the NVR, where the PPPoE connection requires user ID and password.
  - NVR Network Settings: Set the `<Network>` in `<Interface>` menu of the connected NVR to `<PPPoE>`.

  - PPPoE `<User ID>` and `<Password>` should be the same to the PPPoE user information.
  - If you don't know the ID and password, consult your PPPoE service provider.

When a router is used

- To avoid IP address conflict with the NVR’s static IP, check followings:
  - Setting the NVR with a static IP
  - Internet connection: You can connect the NVR to a router which is connected to an PPPoE/Cable modem or a router in a Local Area Network (LAN) environment.

- Setting the NVR Network
  1. Set the `<Network>` in `<Interface>` menu of the connected NVR to `<Static>`.
  2. Check whether the set IP address is in the static IP range provided by the Broadband Router.
  - IP Address, Gateway, and Subnet Mask: Consult your network manager.
  - Check whether the set IP address is in the static IP range provided by the Broadband Router.

  - If a DHCP server is configured with starting address (192.168.0.100) and end address (192.168.0.200), you should set the IP address out of the configured DHCP range (192.168.0.2 – 192.168.0.99 and 192.168.0.201 – 192.168.0.254).
  3. Check the Gateway address and subnet mask are equal to those set in the Broadband Router.

- Setting the DHCP IP Address of the Broadband Router
  1. To access the Broadband Router’s configurations, open a web browser on the local PC that is connected to the Broadband Router and enter the router’s address (ex: http://192.168.1.1).
  2. At this stage, make the local PC’s windows network configurations to the below example:

  - IP: 192.168.1.2
  - Subnet Mask: 255.255.255.0
  - Gateway: 192.168.1.1

  - Once connected to the Broadband Router, it prompts with password. While entering nothing to the User Name field, enter "admin" into the password field and press `<OK>` to access the router configurations.
  - Access the router’s DHCP configuration menu and set its DHCP server activation, and provide the start and end address.
  - Set the start address (192.168.0.100) and end address (192.168.0.200).

  - Above steps may differ from the router devices depending on the manufacturer.

Port Setting

- Protocol Type: Select the protocol type among TCP, UDP - Unicast and UDP - Multicast.
- Device Port: Enter the connectable port number. Initially, `<554>` is set.
- TCP: It has better stability and lower speed when compared to UDP, and recommended for internet environments.
- UDP Port: Initially, `<8000~8159>` is set. It increases / decreases by 160.
- UDP: It has less stability and faster speed when compared to TCP, and recommended for local area network (LAN) environments.
- Multicast IP Address: User can directly input.
- Multicast TTL: Select from 0 ~ 255. Initial value for the TTL is set to `<5>`.
- HTTP Port: Enter the port number for the Web Viewer. Initially, it is set to `<80>`.
- Send SSL: Select this option to send SSL.
- Backup Bandwidth: Select the degree of backup bandwidth.
DDNS

If a remote user accesses the network, you can set whether or not to use DDNS and the site to be connected.

- **DDNS Site**: Specify the use of DDNS and select a site that you registered.
- **Host Name**: Provide the host name that you registered with the DDNS site.
- **User Name**: Provide the user ID that you registered with the DDNS site.
- **Password**: Provide the password that you registered with the DDNS site.

Refer to "Using Virtual Keyboard". (Page 27)

If you select <OFF>, the input box will be inactive.

If you select <hanwha-security.com>, the host name input box will be inactive.

Quick Connect: Appears if the <hanwha-security.com> is selected for a <DDNS Site>.

To use the function, set to <Use> after connecting the NVR to a UPnP router.

If canceled during Quick Connect configuration, it automatically switches to <Not Use> and saved.

To check Quick Connect status
A progress bar and its message appears for a Quick Connect.

- **Quick Connect Success**: Message for a successful connection.
- **Invalid Network Configuration**: Message appears if the network configuration is not valid. Check the configuration.
- **Please enable UPnP function of the router**: Message appears if the router requires UPnP function enabled.
- **Failed to find the router**: Message appears if the router is not found. Check the router’s configurations.
- **Please restart the router**: Message appears if the router should be restarted.

DDNS Setting

DDNS is a short form of Dynamic Domain Naming System. DNS (Domain Name System) is a service that routes a domain name consisting of user friendly characters (ex: www.google.com) to an IP address consisting of numbers (64.233.189.104).

DDNS (Dynamic DNS) is a service that registers a domain name and the floating IP address with the DDNS server so that the domain name can be routed to the IP address even if the IP is changed in a dynamic IP system.

- **Setting DDNS in the NVR**
  Set <Protocol Type> in the <Protocol> menu of the connected NVR to the following:
  - Ex) Protocol Type: TCP  
    Port (TCP): 554, 555, 556, 557, 558  
    DDNS Site: hanwha-security.com

- **DDNS Settings of the Router**
  Select the corresponding menu for the network transfer protocol of the router.

- **Setting up UPnP of Router**
  Refer to the router’s documentation to enable the UPnP function of the router.

IP Filtering

You can prepare the list of IP addresses to allow or block access to a specific IP address.

- **Filtering Type**:  
  - Deny: If you select reject, access to the registered IP address will be limited.  
  - Allow: If you choose permit, then they can only access the registered IP addresses.

- **Use**: Select the checkbox for the IP address that will use IP filtering.
- **IP Address**: Enter the IP address for filtering.
- **Filtering Range**: If you enter an IP address or prefix, then the range of IP addresses blocked or permitted will be displayed.

- **Warning**:  
  - If a camera’s IP address is not included in the Permit list or is in the Reject list access to it will be rejected.
  - Camera IP filtering through PoE port is not applied to IPv4. (The existing connection is maintained, and filtering is applied to subsequent connections.)
SSL

You can select a security connection system or install public certificates.

- Secured Connection System: You can select a type of security connection system.
  - HTTP (Non-secured connection)
  - HTTPS (Secured connection using unique certificate)
  - HTTPS (Secured connection using public certificate)

- Install Public Certificate: You can scan and register public certificates to be installed. If you want to use a certificate, you need to install a certificate file along with and an encryption file.

  - The "HTTPS (Secured connection using public certificate)" menu can be selected only if there is a registered public certificate.

802.1x

When connecting to a network, you can select whether to use the 802.1x protocol and install a corresponding certificate.

802.1x is a certificate system for the server and the client. It can guarantee robust performance against hacking into the Tx/Rx network data, virus or information leaks.

By using this system, you can block access from a client who is not certified and only allow communication to certified users and thus increase the level of security.

- EAPOL Version: Select the EAPOL version to be used as protocol.
  - Some switch hubs will not operate if you set them to version <2>. Select version <1>.

- ID: Enter the ID provided by the RADIUS server administrator.
  - If the entered ID does not match the ID of the client's certificate, it won't be processed properly.

- Password: Enter the password provided by the RADIUS server administrator.
  - If the password you entered does not match that of the client's private key, it won't be processed properly.

- Certificates: Search for a device. Click on "Rescan" to search for a device again.

- CA Certificate: Select this only if your public certificate includes the public key.
- Client Certificate: Select if the public certificate includes a client's authentication key.
- Client Private Key: Select it if the public certificate contains the client private key.

For successful implementation of the 802.1x operating environment, the administrator must use the RADIUS server. In addition, the switch hub connected to the server must be a device that supports 802.1x.

If the time setting of the RADIUS server, the switch hub and an NVR device do not match, communication between them can fail.

If a password is assigned to the client's private key, the server administrator should confirm the ID and password.

The ID and password allow up to 30 characters each. (But it only supports letters, numbers and special characters ("", ", " , 3 types) only.

Accessing non password-protected files is allowed without entering a password.

The 802.1x protocol adopted by the NVR is EAP-TLS.

You need to install all three certificates to use 802.1x.
**Live Streaming Setting**

You can set the video profile transmitted to the network.

- **Profile**: Select a network profile for the connected camera.
- **Codec**: Show the codec information for the selected network profile.
- **Resolution**: Display the resolution for the selected network profile.
- **Frame Rate**: Display the frame rate for the selected network profile.

⚠️ If the profiles used for network and recording are different, camera’s video feed may not comply with the frame rate as specified in the camera.

**E-mail**

You can send an e-mail to a NVR-registered user at a specific time interval, or if an event occurs.

**SMTP Setting**

Sets the SMTP mail server.

- **Server Address**: Enter the SMTP server address to connect to.
- **Port**: Sets the communication port.
- **Use Authentication**: Check this if the SMTP server uses user authentication. The account input box will be activated.
- **ID**: Enter a ID to use authentication when connecting to the SMTP server.
- **Password**: Enter the password of the SMTP server user.
- **Secure Transfer**: Select one from <Never> and <TLS (if available)>.
- **Sender**: Use the virtual keyboard to enter the sender’s e-mail address.
  - Refer to "Using Virtual Keyboard". (Page 27)
- **E-mail Test**: Conducts the test on the server settings.

**Event Setting**

You can set the interval and type of the event that will be sent to the user.

- **Event Interval**: Set the event interval.
  - If a series of events occurs, the e-mail will be sent at the specified interval, not on each event.
- **Use Event Transfer**: Select an event type to send if an event occurs.
  - If the selected event occurs, the e-mail will be sent to the group that has the recipient authority.
Recipient Setting

You can create a group and add users to it or you can delete users and change a group.

- Click on < to add a group. Select a group name and the privilege.
- Select a recipient group to receive emails. If a group is added, it will appear in the group list.
- Click on < to add a recipient. Select a group and enter names and email addresses. If a group is created, you can add a recipient.

SNMP

Using the SNMP protocol, the system or network administrator can monitor the network devices remotely as well as the operating environment.

- Enable SNMP v1 : SNMP version 1 is used.
- Enable SNMP v2 : SNMP version 2 is used.
- Enable SNMP v3 : SNMP version 3 is used.
- Password : Set the initial user password for SNMP version 3.
- Enable SNMP Traps : SNMP trap is used to send important events and conditions to the Admin System.
- Trap Manager : Enter the IP address to which messages will be sent.

DHCP Server

You can set the internal DHCP server and assign an IP address to the network camera.

- Network 1/2 : Select <Setup>, and you can set the IP range operated by the server and time.
- In PnP mode, Network 2 does not support DHCP Server.

To set the DHCP server

1. On the DHCP Server Setup window, click <Setup>.
2. Select <Run> in the <Status> field.
3. Enter the starting IP and end IP in the <IP Range> field.
4. Fill in the <IP Lease Time> field.
5. Click <OK>.
- The IP range entered is set as the DHCP server address of the network.
Check IP
You can check the IP Address and Mac currently used through the DHCP server, and the connected network port.

| MENU | [ENTER] | ▼ | <Menu> | [ENTER] | ▼ | <Network> | ▼ | <DHCP Server> | [ENTER] | ▼ | ▲ | <Check IP> | [ENTER] | ▼ | ▲ | [ENTER] |

- Network : Select the network port to check the information on IP and others.
  - In PnP mode, Network can’t choose.

P2P
When using P2P service, NVR can be used by connecting to mobile web viewer.

| MENU | [ENTER] | ▼ | <Menu> | [ENTER] | ▼ | <Network> | ▼ | <P2P> | [ENTER] |

- Enable P2P : Select check box if you want to use P2P service.
- QR Code : Scan QR code by mobile device.

To run the P2P service
1. When <Enable P2P> is checked, the connection test runs to check if it can be remotely connected from the current NVR.
2. When the connection is successful, search for WiseNet Mobile from the smart phone, and then install and run it.
   - When Add a device > QR code is selected, the NVR QR code can be scanned.
3. When the QR code is scanned, the device ID that can be seen in NVR is automatically converted to mobile viewer ID, and the mobile viewer can be used right away when the ID/password of NVR is entered.
4. After this, it automatically connects to NVR and can be monitored easily with a smart phone when running WiseNet mobile app saved in the smart phone.

- The expiration date for the P2P service is three years after the purchase of the product, and the remaining period can be checked in mobile FAQ.
**SEARCH**

You can perform the search for recorded data by the time or by the search criteria such as an event. You can access the <Search> menu directly in Live mode.

1. In live mode, right click with the mouse button or press the [MENU] button on your remote control. The Live menu appears.
2. Select <Search>.
3. The Search menu should appear.
4. The search can be restricted by the Auto Delete function. Refer to "Setting the Recording > Record Option". (Page 42)

- Overlapped data: It only appears if there exists overlapped data on a certain time, produced due to the change of NVR’s time setup. The latest data comes first, from <List0>. It does not appear in <Backup Search>.
- The search time is based on the time specified by NVR.

**Time Search**

You can search for recorded data of a desired time. The displayed time is based on the local time zone and the daylight saving time (DST). Therefore, data recorded at the same time from different areas may differ based on the time zone and the DST.

1. Select <Time Search> in the <Search> menu.
2. In the date selection window, click on the <↑→↓> button to select a search date.
   - For using the calendar, refer to "To use the calendar". (Page 26)

3. The record data on the specific date will be listed. The display bar is different according to the data type. So check the data type for the color in the left pane.

   - If DST (Daylight Saving Time) is configured, overlapping multiple recordings may be produced for a certain moment of time. Such a time section is distinguished with red color to mark DST section.

   - Go to First: Move to the earliest recording date.
   - Go to Last: Move to the latest recording date.
   - Time: Enter a time to perform the search or use the up/down button <↑→↓> to select one.
   - Zoom In: The map enlarges in detail. It will switch in the sequence of 24 hours - 12 hours - 6 hours - 2 hours - 1 hour.
   - Zoom Out: The map will switch in the reverse order of the detailed mode above. It will switch in the sequence of 1 hour - 2 hours - 6 hours - 12 hours - 24 hours.
   - Preview: Click <Channel> and select (click, drag) a time in <Duration> to display a still image for the portion.
     - If the selected channel does not contain any recorded data, it will be marked black.

4. Select a data item and click <Play>. The screen switches to the data playback mode.

**Color indications depending on current recording status**

The recorded data types are represented through the use of different colors. Each color corresponds to a certain recording type.

**Event Search**

You can search for events by the channel and play them.

1. Select <Event Search> in the <Search> menu.
2. Configure the channel, search date and event type settings.
   - Depending on the menu selected, it will search for all/motion detection/video analysis/audio detection/sensors/reservation/general recording events.
   - Date/Time Preview: If you select a data item in the list, the still image of the selected data will be displayed in the left preview pane.
   - Event: Displays the type of the event that occurred.
3. Select a data item and click <Play>. The screen switches to the event data playback mode.
Smart Search

You can select a specific area of the image as an area of interest or exclusion using a virtual line to perform a search of events that have occurred in a specific time period.

- To perform smart search, the <Smart Search> option in <Camera Event> should be turned <ON> and the camera motion event option must be set to the entire area (page 43).

1. In the <Search> menu, select <Smart Search>.
2. Configure the channel, search date and time settings.
   - Go to First : Moves to the oldest smart search result.
   - Go to Last : Moves to the most recent smart search result.
   - Event : Displays the type of event generated.
   - Region of Interest : The entire screen is set as a non-detection area and a specific area designated as a detection area. Click and drag on the image or select 4 vertexes to designate a desired detection area.
   - Exclusive Region : The entire screen is set as a detection area and a specific area designated as a non-detection area. Click and drag on the image or select 4 vertexes to designate a desired non-detection area.
   - Virtual Line : Detects a motion towards a marked direction based on the virtual line. At a desired position on the screen, click or drag the start point and end point of the line.
      - Up to 3 areas of interest, areas of exclusion and virtual lines can be set, respectively.
3. Click the <Search> button.
   - Search results displayed include a list, timeline and thumbnail.
   - When you double-click a list or thumbnail displayed as search results, the applicable data can be played back.
4. Select data to play and click <Play>.
   Moves to the playback screen for the data searched.

Text Search

You can search data that was entered into POS systems connected to NVR.

1. Select <Text Search> from the <Search> menu.
2. Please specify the search criteria and click the <Search> button.
   - A deeper and more detailed search can be performed by using specific characters.
   - Search characters : Enter characters using a virtual keyboard.
   - Event Keyword : Search using a condition set in the "Device > Text > Event settings" menu. (Page 40)
   - Search Condition : Enter a word to search in the input screen and press the <Search> button.
     - <Case Sensitive> : If this option is checked, the search terms are case-sensitive.
     - <Whole Word> : If checked, only results that exactly match the input words will be displayed.
   - Time overlap : This is displayed if there is data duplicated during a preset time interval.
   - Preview screen : If data is selected from a list, a preview image is displayed. All information is displayed in the text display below.
   - Export : Stores all text search information recorded in NVR to storage media.
3. Select data and <Play>.
   Moves to a replay screen for searched text data.
Backup Search

Searches for backup data in the connected backup device. Only data in the format of NVR is included in the search.

1. Select <Backup Search> in the <Search> menu.
2. When storage media with data is connected, the list of recordings stored is displayed on the equipment.
   - File Name : Displays the name of a file recorded.
   - Channel : Displays the recorded channel.
   - Record Period : Displays the record period.
   - Play Start Time : Select a time that you start playing.
3. Select data to play and click <Play>.
   The screen switches to the backup data playback mode.

ARB Search

1. Select <ARB Search> from the <Search> menu.
2. The type and model name of the ARB storage device are displayed. When storage media with data is connected, the list of recordings stored and ARB data volume are displayed on the equipment.
   - File Name : Displays the name of a file recorded.
   - Channel : Displays the channel recorded.
   - Record Period : Displays the duration of recording.
   - Play Start Time : Select the time at which the video is to be played.
   - ARB Export Device : Selects an ARB storage device and exports a file.
     • Press the <> button and you can check the free space remaining in the storage device.
3. Select data to play and click <Play>.
   The screen moves to the ARB backup data play screen.
search & play
PLAYBACK

Play
You can play data stored in the HDD and backup a desired portion of the data.

1. In the live menu screen, select <Play> menu or click on <Play> in the launcher menu or press the [►] button on your remote control.
2. Using the up/down (▲▼) button, select the search menu.
   - If this is the first time you try to play, you will start with the data search window.
     For data search, refer to "Search". (Page 51)
3. Select a data item and click <Play> in the Search menu.
   The selected data is played and the play launcher appears on the screen.
   - If there is an existing data, <Play> will start immediately without performing the search.
   - Playback Information : Displays the date and time of the current data in the top corner.
   - Backup : Click <Play> to set the current time to the start time of backup; you can specify a backup area using the mouse (yellow triangle).
     Click <Play> again to set the current time to the end time of the backup and the "Backup Range" window appears.
     - Type : Supports formats of NVR and SEC.
     - When you select the SEC format, you can select or deselect "Text data included".
     - Device : Select a backup device.
     - Check Capacity : Enables you to check the capacity of the selected storage device.
4. If you want to return to the live screen while playing, click <Play> on the launcher menu or press the [►] button on your remote control.

Checking menu while playing a video
1. Right-click on the play screen.
   Screen menu appears on the play screen.
2. Select a menu to run.
   For more information about each menu, please refer to the "Split Mode Menu". (Page 17)
   - Rotate mode only appears in single screen mode. You can rotate the play screen by 90 degrees.

Using the Playback Button

   Indicates the current playback point, and can be used to move.
   Moves backward by unit time.
   Used for quick backward search while in Play.
   Used for backward frame-by-frame search while in PAUSE.
   Moves backward by one frame at a time.
   Stops playing the current video temporarily.
   Stops playback and moves to the live screen.
   Moves forward by one frame at a time.
   In a split mode, the real time playback may not be supported, depending on the record quality, resolution and number of channels. And some frame rates may be supported.
   Used for quick forward playback.
   Moves forward by unit time.
   Return to the search setup screen.
   Sets Audio ON/OFF.
   Records all channels in Live mode.
   This is available in Single mode, which will enlarge the video from a selected channel. To cancel the zooming, simply double-click the enlarged image or select <Close Zoom> in the Live screen menu.
   Begins backup of the selected section of the video being played, with the specified starting/ending point.
   Click on a desirable play mode to change the screen segmentation mode.
WHAT IS WEB VIEWER?

WebViewer is a software program with which the operator can access a remote NVR (Network Video Recorder) for real-time monitoring, PTZ control (if configured) or search.

Product Features

- Remote connection using the browser
- PTZ camera control enabled
- 4:3 mode : supports 1, 4, 9, 1+6, and 1+7 channels (up to 8 cameras)
- 16:9 mode : supports 6, 12 channels (up to 8 cameras)
- Saving function in JPEG/BMP/PNG image format for printing and storage.
- Record video in AVI format-compatible with popular media players. (The integrated codec is needed)
- To play the video in Windows Media Player, you must download and install the relevant codec from www.windows7codecs.com. (version 4.0.3 or higher)

System Requirements

The following lists the minimum suggested hardware and operating system requirements needed to run the Web Viewer.

<table>
<thead>
<tr>
<th>Item</th>

<td>1280 x 1024 or higher</td>
<td></td>
</tr>
</tbody>
</table>

OS

- Supported OS : Windows 7, 8.1, 10, Mac OS X 10.9, 10.10, 10.11
- Plug-in free web viewer
- Supported web browsers : Google Chrome 47, MS Edge 20
- Plug-in WebViewer
- Supported web browsers : MS Explorer 11, Mozilla Firefox 43, Apple Safari 9 / Mac OS X only

Network

10/100/1000 Ethernet NIC

CONNECTING WEB VIEWER

1. Open your web browser and type the IP address or URL of NVR into the URL address box.
   - Accesses the web viewer by connecting to Network 2 (recommended).
   - “192.168.2.200” is set to IP by default.
   - You must have specified the IP address in “Network > Interface”.
   - The URL connection will be enabled only when the DDNS connection settings have been completed.
   - For more information, refer to “Network Configuration > DDNS” (Page 46)

2. A user with the admin permissions should provide the admin ID and password. A registered user should provide the user ID and password.
   - The initial ID and password for webviewer is “admin” and “4321”. When an initial password is entered, while partially resetting to access a web viewer, a pop up window will appear that will guide the user to change the password and when doing a whole reset to access a web viewer, a pop up window will appear that will guide the user to complete the settings for the Install Wizard. Set a new password when a pop up window appears.
   - Please change your password every three months to safely protect personal information and to prevent the damage of the information theft
   - Please, take note that it’s a user’s responsibility for the security and any other problems caused by mismanaging a password.
   - It allows up to 10 simultaneous access including the Admin and general users
   - Password of the Admin and general users can be changed in <User> menu of the NVR
   - Normal users should have set <Webviewer> under <Restriction on Network Access> to Use before connecting to the Web Viewer. (Page 28)
   - All settings are applied by the NVR’s settings.

3. The plugin installation confirmation pop-up window will appear.

4. When a program installation wizard window appears, press the [Install] button to install the program.
   - The version of the program installed may vary depending on the update version.

5. When program installation is complete, click on the [Finish] button.

6. After completing installation and successfully logging in, the main live viewer screen appears.
If you want to access the web viewer with multiple browsers

Set auto execution of plugin (npNVRViewer) in the browser menu that you first access, and refresh the screen after activating the plugin or selecting plugin reliability.

- Each time the browser is upgraded in the future, the plugin activation method can be changed. Plug in setting menu can be referred to in the browser manual.

- For Chrome browsers, “Plug in is not activated. Please select ‘Always run on this site’ and refresh”, then select the ‘always execute on this site’ button in the top of the browser.

- On a browser in the latest version that does not support plug-ins, please refer to the descriptions about the plug-in free web viewer stated below.

Accessing the Plug-in Free Webviewer from a web browser

To log in

1. Open a web browser and enter the IP address of the NVR or a URL in the address bar.
2. A user with administrator authority should enter an administrator ID and password.
   A regular user should enter a user ID and password.
3. <Lite ver. Webviewer> check box is selected by default on a browser that does not support plug-ins.
   - This option is only supported by an Internet browser that does not use plug-ins (e.g. Chrome, Edge Browser).
   - As the plug-in free webview has lower performance than the plug-in webviewer, it has a limit on the monitoring of high quality profiles.
   - To monitor high quality profiles, use either a plug-in webviewer or network viewer.

Live viewer screen layout

Menu Description
1. System Status Display Displays icons that indicate the screen state of system status.
   - For more information about each icon, please refer to “System Status”. (Page 58)
2. View Menu Enables or disables View Menu.
3. Select Menu Displays the user login ID and moves to the setup page.
   - The way that you configure settings is identical to the existing web viewer settings. Please refer to “Setup Viewer”. (Page 66)
4. Changes the camera profile.
5. Captures the current video and saves it in a designated path.
6. Supports the PTZ Digital Zoom function.
7. Turns the sound ON/OFF.
8. Changes the aspect ratio.
9. Logs out your account.

Shut down

- Plug-in Free Webviewer only supports a single split live screen. However, output of only up to 720p resolution is available.
  Resolution exceeding 720p will not be displayed. (Exception - H.265 codec is not output if the resolution and frame rate exceed 720P 26fps.)
- You can change the live screen by selecting <Channel 1>.
## LIVE VIEWER

You can check the video from camera registered in the NVR connected from a remote PC. Also, you can adjust the camera and check the network transfer status.

</tbody>
</table>

**To capture a screen**

1. Click <button> button.
2. Select the path and name the file. And then click the <OK> button.
3. Save current camera’s video image as .bmp, .jpg or .png file.

- If the viewer is running without the administrator’s permission in Windows 7, you may not save the captured image as .bmp, .jpg or .png file.

**To print a screen**

1. Click <button> button.
2. Print current camera’s video image with the printer connected to the PC operating the Web Viewer.
Setting the layout

If you don’t add or save it in the layout after registering a camera, the live screen will not be displayed.
Click on the < > button to launch the layout setting screen.

If you want to add a layout
Click on < >.
Set the layout name to add and click on the <OK> button to add it.

If you want to change the layout name
Select the layout name to change and click on < >. After changing the name, click on the outside of the layout window to change the name.

If you want to save the layout
Click on < >.
The changed layout will be saved.

⚠️ The layout for each user is saved separately.

If you want to delete the layout
After selecting the layout to delete, click on < >.
The selected layout will be deleted.

⚠️ Unless you press the Save or Delete button, changes will not be saved.

Changing Split Mode

When clicking the Split Mode selection button, the screen is changed into the selected split mode.
**Setting screen switching**

If you don’t register the layout, the screen switching function will not operate.

You can view the layouts one by one. Click on the `<Sequence>` button to launch the switching setting window.

1. Select the layouts to be shown in turn by pressing `<Sequence>`.
2. Enter the screen switching time.

3. Click on the `<OK>` button to save the designated sequence.

---

**To perform switching**

Click on the `<Sequence>` button to activate the switching mode and run a sequence.

**Auto Sequence**

- In a split mode, if you have set `<Sequence switching time>` in "Device > Monitor", Auto Sequence will be conducted at the set interval. (Page 39)
- When switching to another channel, the video may be slightly delayed depending on network status.
- If you perform automatic switching of a single screen, the layout setting menu will be deactivated during operation.
How to query text devices and data

Checks the text data transmitted from POS systems that are connected to NVR.

If the <text> button is selected, you can turn on/off the function to query text devices and data located in a separate area.

- A queried device should be set in terms of its usage, channel, etc. by selecting "Device > Text > Device". (Page 40)

CONTROLLING A CONNECTED NETWORK CAMERA

Controlling PTZ

If PTZ camera is connected, the <PTZ> icon appears on screen. When selecting corresponding camera channel, the PTZ tab is provided to allow you to control the PTZ.

</tbody>
</table>

**To activate digital zoom**

1. Press the <button> button and the screen will be zoomed in by 50% per click.
2. Press the <button> button and the screen will be zoomed out by 50% per click.
   - You can zoom in or out by 10% with the mouse wheel.
3. Click the <button> button and the screen returns to 100% size.

   Digital zoom function is only available in the single model.

**To set a preset**

1. Click <button> button to display “Preset” window.
2. Click on <button> to select the preset order.
3. Enter the name of preset.
4. Use direction keys to adjust the direction which camera aims at.
5. Click the <button> button.

**To activate the preset**

1. Click <button> button to display “Preset” window.
2. Select a desired preset to activate from the list.
   The camera’s framing moves to the preset position.

**To activate Swing(Auto-pan), Group(Scan), Trace(Pattern) and Tour**

You can activate listed functions in the same manner as using a preset. For more information, refer to corresponding user manual of applicable camera.

- Only selective functions of the camera can be supported, depending on camera.

**To use the Digital PTZ (D-PTZ) function**

1. Register a camera that supports the D-PTZ profile.
   - In cameras that support the D-PTZ profile, you can use the D-PTZ function.
2. Both cameras that support general PTZ and cameras that support D-PTZ can control the live image using some of the <button> function menus.
   - For more information about the supported functions, please refer to the camera manual.
You can search and play the video record saved in NVR by accessing NVR remotely.

Search Viewer Screen

1. Menu Selection
   Switches to the corresponding menu screen by clicking each menu.

2. Calendar
   Displays the video-recorded date in blue and today in red. Click the date in blue color to display the recorded video information in timeline.

3. Channel selection
   Displays the search channels.

4. Search
   Search for the user designated channel for the selected date.

5. Text Search
   Searches data that was entered into POS systems connected to NVR.

6. Channel displays
   Display the selected channel number.

7. Sound
   Sets the sound connected to each channel to either ON/OFF.

8. Capture
   Saves current video for selected channel in the designated path.

9. Print
   Prints current video image for selected channel through the assigned printer.

10. Section backup
    Backup the video for the selected section.

11. Rotate Video
    Rotates the screen of a selected channel by 90 degrees.

12. Keep ch. scr ratio
    Changes screen ratio of the selected channel.

13. Keep full scr ratio
    Changes screen ratio for all channels.

14. Magnify/Shrink
    Magnify or shrink the current video for the selected channel.

15. OSD
    Displays the channel information.

16. Full screen
    Show the four way split screen in the full screen.

17. Sound control
    Adjust the audio for the video searched.

18. Fisheye
    Runs the fisheye settings for the selected channel.
    (Configures the mounting mode and the view mode to correct the screen distortion.)

19. Recording Color
    Displays the corresponding color depending on recorded data type if you place your mouse cursor on that area.

20. Display Pane
    Plays corresponding data on the screen if you select a search result.

Time Search

You can search recorded data by setting date and time.

To search by date

You can select the search date by using calendar.

1. Click on `< >` to select the year/month for your search.
   If a date has data associated with it, it is displayed in blue. The current date is displayed as a blue box.

2. Click the date to search in calendar.
   The first image of searched video data on the date is displayed on screen and the data is displayed in the timeline.

3. To search video data on today, click `<Today>`.
   Today’s date is selected.
Color indications depending on current recording status
Displays the corresponding color according to the recorded data type.

- **Standard**
- **Motion**
- **Schedule**
- **Camera Event**
- **Audio Detection**
- **Sensor**
- **DST**

* If 2 or more kinds of recording type are mixed for the same timeline, only the recording type with higher priority is displayed. (Priority: Standard > Motion > Schedule > Sensor > Camera Event > Audio Detection > DST)

To adjust timeline
If searched data are overlapping, you can select a desired data, move its playback time point, and zoom in/out the timeline.

1. Select the number of data to search if data is overlapping. It appears only when data are overlapped and assigns <0> to the most recent data.
2. Click your desired time point to play on the timeline. The playback start point is moved.
3. Click << / >> to zoom in/out the zoom factor to display time.
4. When magnified, if you want to view the pre/post timeline, click on the timeline and drag it in the direction you want to move it.

If you want to check the recording list
The results for each recording section will be displayed.

---

To back up the search results
You can back up the search results in the list.

1. Click the [ ] button.
2. From the search results, select the check box of the item you wish to back up.
   - **Format**: Select the format of the file to back up.
     - AVI: Codec information provided from the NVR is saved together and can be played in a separate viewer (Windows Media Player, etc.) on the PC.
     - SEC: Proprietary file format, which can be played on the PC immediately as it is saved with a dedicated viewer. When you select the SEC format, you can select or deselect "Password" and "Text data included".
   - **Path**: displays the location of the folder in which the section backup file is to be saved.
3. After completing the backup settings, click the <Backup> button.
   - If you press the <Stop> button during the backup process, the backup will be suspended.

To run the section backup function
You can select and back up a desired section in the timeline or list of video(s) being played.

1. Click the [ ] button.
2. On the timeline of a video being played, select the start point and the end point of the section to back up. Section backup settings screen will open.
   - **Channel**: Displays the channel for the section backup.
   - **Backup section**: Displays the <Start time> and the <End time> of a section to back up.
   - **Format**: Selects the format of a section to back up.
     - AVI: Codec information provided from the NVR is saved together and can be played on a separate viewer (Windows Media Player, etc.) on the PC.
     - SEC: Proprietary file format, which can be played on the PC immediately as it is saved with a dedicated viewer. When you select the SEC format, you can select or deselect "Password" and "Text data included".
   - **File name**: Sets the name of a section backup file.
   - **Path**: displays the location of the folder in which the section backup file is to be saved.
3. After completing the section backup settings, click the <Backup> button.
   - If you press the <Stop> button during the section backup process, the backup will be suspended.
Text Search

You can search data that was entered into POS systems connected to NVR.

If you want to search by a text

1. Select a date and time to search.
2. Set event keywords and search conditions.
   - Search Condition : Enter a text to search.
   - Event Keyword : Searches based on the condition set in “Device > Text > Event settings”. (Page 40)
   - <Case Sensitive> : If checked, search terms are case-sensitive.
   - <Whole Word> : If checked, only results that exactly match the input search terms are returned.
3. Click the <Search> button.
   - Refer to <Text Search> for the detailed text search method. (Page 52)

If you want to restore text search

When you enter search conditions and replay the search result with ON/OFF button in the upper right hand, it is possible to query text data.

  - Set the time synchronization.

- **DST (Daylight Saving Time)**
  - During the summer, Daylight Saving Time (DST) advances clocks one hour forwards from the standard local time zone.

- **Language**
  - Select a preferred language for the NVR.

- **Holiday**
  - A user can select specific dates as holidays according to their own preferences.
User
For more information, refer to "User" in the "System Setup" menu. (Page 27)

Administrator
You can change the admin ID or the password.
- ID allows alphanumeric characters only.
- If the admin ID is not used for access, you cannot change the ID.
- If the ID being used is changed, you will be automatically logged out.

User
You can add, change or remove a user or users.

Permission Setup
You can set the user permission.

System Management
For more information, refer to "System Management" in the "System" menu. (Page 29)

System Information
You can see information of the current system.
Check the model name, software version, MAC address.
You can search for a file from the storage device connected to the PC to perform an upgrade.

Settings
Using a storage device, you can apply the current configuration of NVR to another NVR.
Press the Initialize button to return the network settings to their factory default state. Items in the <Not Included> category are excluded from the initialization.

Log information
System log
Data recorded in the system log displays various system-related logs/date/time such as system starts, system ending and menu setting changes.
Event log
The event log lists recorded events, such as sensor events, camera events, or video losses.

Backup log
You can inquire about a user who performed a backup, execution time, details (backup time, channel, backup device, backup file type).

Device
You can check a list of devices that are connected to the NVR and configure the necessary settings.
Click <Device> in the menu screen.
For more information, refer to “Setting the Device” (Page 31)

Camera
Cam Registration
You can add a network camera(s).

Camera Setup
You can change the settings of a connected network camera.

- When you click the [Camera website] button, a new camera web browser window is opened.
  - It supports the version specified below or later for each Q/P/X series camera.
    (QND-7010R series: 1.04, QND-7080R series: 1.02, QND-6010R series: 1.02, QND-6070R series: 1.01, P series: 1.01)
  - It supports only when the camera is connected to IPv4 and is not set to HTTPS.
  - When you are connecting to the camera web page on a closed network, a camera that does not support the universal web will not be able to output an image.
  - When trying to connect, if the plugin does not get installed, try again after setting the compatibility view from the web page of the NVR web viewer.

Camera Password
You can change the passwords of all registered cameras at once.

Live Setup
You can change the life transfer settings of the network camera.
Channel Setup
You can configure the video settings for each channel.

Storage Device
You can check and change the settings related to the data storage device.

Device/Format
You can check a storage device, amount of use, type of use and status of storage device.

- ARB : Video that was not recorded due to disconnection from the camera can be backed up after the connection with the camera is re-established.

  Press the button and an <Auto Recovery Backup> window is opened.

  For more information about settings, please refer to "Device/Format". (Page 37)

HDD Alarm
You can set the alarm output port and the duration in case an error occurs.

Monitor
You can configure the monitoring screen settings and set the output system.

  - If the video is not played properly, refer to the troubleshooting section later in this manual. (Page 82)
  - The Monitor Setup settings control the monitor connected to the NVR.

Text
Device
Relevant values of a device connected to NVR can be set.

Event
It is possible to set total amount conditions and keywords to display events of a text device.
Record
For more information, refer to "Setting the Recording". (Page 40)

Recording Schedule
If you set a recording schedule for a specific date and time, the recording will start at that specific time.

Record Setup
NVR
Select a type of the normal/event recording frame rate for each channel.

Camera
You can set the recording profile for a network camera.

Record Option
You can set the Disk End Mode.
* You can set the recording duration separately for each channel.
Event

For more information, refer to "Setting the Event". (Page 42)

Sensor Detection

NVR / Camera

You can set the sensor operation mode and the synchronized camera as well as the alarm output type and the duration.

- If the connected network camera that has configured the alarm in/out settings triggers an alarm, NVR will perform the alarm out.

Camera Event

You can set NVR and camera event mode, alarm output type and alarm time.

Video Loss Detection

You can set to trigger the alarm if a video loss occurs.

Alarm Out Schedule

You can schedule the alarm output according to the day of the week and the time. The default setting is Event Sync, which activates the alarm only if an event occurs.

Network

For more information, refer to "Network Configuration", (Page 44)

Interface

A remote user can access the NVR via the network to check the current mode and the IP address.

Network

Specify the network connection path.

Port

You can configure the protocol related settings.
DDNS

Network 1/2
You can check the DDNS settings.

IP Filtering
You can prepare the list of IP address to allow or block accesses to a specific IP address.

SSL
You can select a security connection system or install public certificates.

* While using HTTPS, if you want to switch to HTTP, then abnormal operation can take place as the browser contains the setting values. You need to change the URL to HTTP and reconnect or initialize the cookie setting of the browser.

802.1x
When connecting to a network, you can select whether to use the 802.1x protocol and install corresponding certificate.

Live Streaming
You can set the video profile transmitted to the network.

E-mail
You can specify the SMTP server that sends a mail if an event occurs and set the recipient group and users.

SMTP
You can set the server that sends mails and specify if you use the authentication process.
**Event**
You can set the event interval and specify which events the server sends mails for.

**Recipient**
You can set groups and recipients to receive emails.

**SNMP**
Using the SNMP protocol, the system or network administrator can remotely monitoring the network devices and sets the environment.

**DHCP Server**
**Network**
You can set the internal DHCP server and assign an IP address to the network camera.

**Check IP**
You can check the IP and MAC currently used through the DHCP server, and the connected network port.

**P2P**
You can check the Enable P2P check box if you want to use P2P service. For using P2P service, you have to scan QR Code on screen.
Using the setting icons

- If the button is selected, you can turn on/off the function to query text devices and data that are located in a separate area.

- Display the ID of user connected.

- You can register a network camera for each channel and easily set the resolution and the number of shots in case of event occurrence or manual recording.
  - For more on how to register a camera, refer to "To register a camera". (Page 31)
  - If the failover mode is in a standby state, <Quick Setup> item is hidden.

- You can manually enter the desired backup channel and time/date to backup the recorded video.
  - You can select whether or not to "Text data included" for SEC format.

- You can check the recording status and the status of camera connected.
  - Live : Select <Live> to check the status of camera connected to each channel and the transmission information.
  - Recording : Select <Record> to check the following for each channel : profile, recording type, inputs / recording transmission rate, settings / inputs / amount of recorded data.
  - PoE : Select <PoE> to check the consumption by PoE connected to each channel.
    - Click on <Camera Registration> to move to Device > Camera > Camera Registration.
      For more on camera registration, refer to "To register a camera". (Page 31)

- You will be immediately directed to the homepage of Hanwha Techwin.
SEC BACKUP VIEWER

You can play a file that is backed up in the format of SEC. Backup in SEC format produces backup data file, library file and self-executable viewer file. If you run the backup file viewer, the backup data file will be played.

Recommended System Requirements

PCs with a lower specification than the recommended below may not fully support forward/backward and high-speed playback.

PC specifications

- Minimum requirements
  - CPU : Intel Core 2 Quad 2.5GHz
  - RAM : 2GB or Higher
  - HDD : 200GB or Higher
  - VGA memory : 512MB or Higher
  - Display resolution : 1280*1024

- Recommended
  - CPU : Intel i7(3.5GHz) or Higher
  - RAM : 4GB or Higher
  - HDD : 500GB or Higher
  - GPU : GTX940 or Higher
  - VGA memory : 2GB or Higher
  - Display resolution : 1920x1080 or Higher

- OS
  - Windows 7, 8.1, 10, Mac OS X (10.9 or Higher)

- Browser
  - 1) Non-Plugin Webviewer
    - Google Chrome 47, MS Edge 20
  - 2) Plugin Webviewer
    - MS IE 11, Mozilla Firefox 43, Apple Safari 9 (Mac OS X Only)

Item Description

1. Split screen
   - Selects screen ratio to display.
   - The screen is changed to a split screen.

2. Fish eye view mode
   - If < > is pushed, it is possible to change to a fish eye installation type. It is possible to select WALL/GROUND/CEILING mode according to the installation place.
   - The fish eye view mode on the current screen can be changed independently on each split.

3. Digital Zoom
   - Enlarge the image by up to 100 times as big as the current one.
   - Press the Zoom In button to enlarge the image; press the Zoom Out button to shrink the image.
   - You can also use the slide bar in the pop-up window to zoom in/out.
   - Press on a size-changed video to restore the default zoom factor (100%).
   - If you enlarge the image by more than 200%, the enlarged area will be marked on the digital zooming screen. Click on the marked area and move it to a desired position.
   - The digital zooming is applied to all backup viewer. When the digital zooming is canceled, the video size will restore the default rate of 100%.

  ![Image of XRN-410S](image.png)

  **APPENDIX**
DEFAULT SETTING

To reset the system, move to "System Management > Settings > Load Factory Default" and press the "Initialization" button. This returns the factory default settings.

- When you initialize with the "Authority Management Settings" included, you are required to reboot the camera and reset the password.
- The default settings are based on XRN-810S.
- The initial administrator ID is "admin" and the password should be set when logging in for the first time.
- Please change your password every three months to safely protect personal information and to prevent the damage of the information theft. Please, take note that it’s a user’s responsibility for the security and any other problems caused by mismanaging a password.

| Live video will be slow or cut off. | - The frame number set for multiple data transmission set in camera or network environment could differ from the actual rate of transmission. Right click with the mouse button and select **<Channel Information>** to check the number of incoming frames for each channel and the actual number of frames played. 
- Basically, when you register a camera, the Live4NVR profile is created and the rate is set to H.264:800*600fps. If necessary, go to **<Menu>** – **<Device>** – **<Camera>** – **<Camera Setting>** and change the number of frames. 
- If you keep seeing video slow down or cut off, then check the network environment or camera condition. |
| The system does not turn on and the indicator on the front panel does not work at all. | - Check if the power supply system is properly connected. 
- Check the power supplier and replace it with a new one if necessary. 
- Check inside if the cables are properly connected. (SMPS, FRONT) |
| Some channels display just a black screen even if they receive video sources. | - Check if the camera is properly supplied with power. 
- Check the video output connecting the camera’s webviewer. 
- Check if the network port is properly connected and the network setting is set correctly. 
- Change the hub supporting Gigabit, it may solves. |
| The screen displays the logo image repeatedly. | - This may occur from a problem with the main board, or the related software is corrupt. Contact the nearest service center for more information. |
| The Channel button does not work on the Live screen. | - The Channel button does not work if the current screen is in the event monitoring mode. |
| The cursor will not move to the Start button when I start the calendar search. | - Check if the channel and the date that you want to play are marked with the V symbol. Both channel and date should be checked before you can start playing with the Start button. |
| No video is played on the connected monitor. | - Check if the necessary cables are connected to the monitor properly. 
- Some monitors do not support the NVR output (HDMI or VGA). 
- If you operate at 60Hz with 4K resolution, the screen may not be able to display. Please check whether your TV supports 30Hz. |

| When plugin does not get installed when trying to connect to the camera web page from camera settings in the web viewer | • Try again after setting the compatibility view from the web page of the NVR web viewer. |
DISTRIBUTION AND MODIFICATION

This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program", means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".)

Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is covered by a different License: see the GPL. We recommend that you also think about applying the GPL to any programs and other works that are designed to work with the Program.

In applying this License, maintain these exceptions and permission in a position equal to the other permission notices.

The precise terms and conditions for copying, distribution and modification are prescribed in Section 2 and 3. The Program may be multiplied and distributed for any purpose and by any means if you meet in full all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause all the files in a particular distributed version, either modified or unmodified, to carry that notice.

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated intermediate files, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. Partial source code, as well as complete source code, means either the complete corresponding source code distributed under the terms of this License, in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above, or for the same cost as you收取 for object code, on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code.

This alternative is allowed only if you received the program in object code or executable form with such an offer, in accord with Subsection b).

The technical solutions command 'show w' and 'show c' should thus be considered as an extension. Of course, the commands you use may be called something other than 'show w' and 'show c': they could even be mouse-clicks or menu items—whatever commands you use may be called something other than `show w' and 'show c'.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if permitted as described in section 3."

You may also make and give away verbatim copies of this license, and the software which it covers, for any purpose and without limitation, provided that you do not charge a fee, you state a full copyright notice, and you retain all other copyrights you might hold.

You do not have to make the programma source code available; you can offer purely executable forms of the programma. If the programma is a non-trivial library, you may consider it more useful to permit linking proprietary applications with the programma. If this is what you want to do, use the GNU Lesser General Public License instead of this programma.

GNU General Public License

Version 3, 29 June 2007

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The GNU General Public License is a free, copyleft licence for software and other kinds of works.

The licenses for most software and other practical works are designed to permit the owner of the copyright to distributions copies, or copies of the programma, and are intended to permit free replacement of old code by improved code. The programma's owners accept responsibility for this, but cannot guarantee that the programma works well in all circumstances.

The GNU General Public License is intended to guarantee that you have the freedom to distribute programma as you see fit even when others are not willing to do so. You can help your neighbors by doing what you know how to do, by distributing programma that satisfies the  terms of this programma.

When you distribute programma, whether gratis or for a fee, you are extending the possiblity of use to the public, the best way to achieve this is to make programma public domain software which makes passes at compilers) written

The "source code" for a programma means the preferred form of the programma for making modifications to it. The "object code" means any non-source form of a programma.

The "standard version" of a programma is the programma that is distributed by the programma's owner under these programma terms.

Any programma which is based in whole or in part on the programma, and is a particular programma, is an "adaptation" of the programma; if you make an adaptation of the programma, then you must apply the programma terms to the original programma, and to any programma that you distribute as an adaptation.

You may convey a programma based on the programma, or the modifications to the programma, if three conditions are met. This programma explicitly affirms your unlimited permission to run the programma for non-commercial purposes. This programma explicitly affirms your unlimited permission to run the programma for non-commercial purposes.

Finally, every programma is threatened constantly by software patents. States may have different laws concerning the limitation or elimination of software patents. Many countries do not allow exclusion of liability for the PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR ANY LOSS OF PROFIT, REVENUE, OR DATA, OR FOR ANY SPECIAL, DIRECT, INDIRECT, OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THIS PROGRAM (including, but not limited to, damages for loss of freedom of choice among other programma), even if the programma's owner has been advised of the possibility of such damages.

The specific terms and conditions for a verbatim programma distribution by you can be found in the programma document, but changing it is not allowed.

For the programma's licence terms to apply, this programma must be published with this programma document, or a copy of it sufficient to make that programma document accessible for backup purposes.

1. Distribution of verbatim programma copies

1.1. Each programma you distribute must be accompanied by this programma document as part of the programma programma, and you must add a notice indicating that the programma programma contains the programma licence terms. You must satisfy the programma licence terms in all respects for the programma programma in your programma distribution.

1.2. You must cause the programma programma you distribute to be individeribly licensed under this programma to all those to whom you make it available.

1.3. You may not offer or provide programma source under this programma under a standard licence, but you may offer or provide programma source a programma licence. You may not make programma available to others under the programma's licence terms in trade, or offer programma for programma without permission under programma's programma terms.

1.4. You may not copy, modify, sublicense, or distribute programma in any other programma. If you wish to use programma in a programma which is not programma, try to make programma programma available under programma's programma terms in programma which is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programma programma which programma is programma programma, and programa
6. Conveying Non-Sources Forms. You may convey a covered work in object code form under the terms of section 4, provided that you also do one of the following:

a) Convey the object code in, or embodied in, a physical product designed and manufactured solely for you to convey the object code using unmodificable means, and the Corresponding Source of the covered work is publicly provided, consistent with this License.

b) Convey the object code in, or embodied in, a physical product designed and manufactured solely for you to convey the object code using modifiable means, and the Corresponding Source of the covered work is excluded from being part of the physical product as a whole.

c) Convey individual copies of the object code, and the Corresponding Source for a work that you have modified, if you permit this user to konvey from the Corresponding Source the object code of the work so modified without charge and under the terms of this License.

d) Convey the object code in, or embodied in, a physical product designed and manufactured solely for you to convey the object code using unmodificable means, and the Corresponding Source of the covered work is publicly provided, consistent with this License.

7. Additional Terms. “Additional terms” are terms that supplement the terms of this License, but do not otherwise alter its conditions. Additional terms may include a license notice that applies only to a given portion of the covered work, or that modifies the notice of copyright required under this License. Conveying a covered work with additional terms included in or added to the object code means conveying the work thus modified. Additional terms are considered part of the object code, and are considered part of the covered work when the work is modified.

8. Termination. You may not propagate or convey a covered work if you do not comply with all of its terms. You may prevent propagation or conveyance of a covered work if the propagation or conveyance would violate these terms.

A patent license is “discriminatory” if it does not include within the scope of its coverage, on terms no less favorable to the party asserting the right to enforce it, at a minimum:

a) The right to make, propagate, or convey the covered work and/or a work derived from it;

b) The right to exercise any other option granted by this License or by the covered work itself.

A patent license is effective no sooner than (1) when you have received its terms; (2) when you have received notice of its terms and of any conditions on which it is available; or (3) when you have satisfactory evidence of a链条受该许可的许可人的通知，if and only if you have received a copy of the Corresponding Source under the terms of section 4 and stated in the notice that such material may be made available to you under the terms when you receive it.

10. Automatic Licensing of Downstream Recipients. Each recipient of the object code from you who receives or derives the object code from you or any redistributee, as well as such recipient’s(latitude, longitude) is hereby granted a perpetual, non-exclusive, royalty-free, non-transferrable license to copy, distribute, propagate, and convey the object code without restriction, provided that copies are not propagated so as to undermine the effective propagation of the object code or work it refers to.

11. Patents. The Work is “Net Software” if it contains software that is net software, as defined in the Open Software Foundation’s Open Source Definition.

A patent license is “discriminatory” if it does not include within the scope of its coverage, on terms no less favorable to the party asserting the right to enforce it, at a minimum:

a) The right to make, propagate, or convey the covered work and/or a work derived from it;

b) The right to exercise any other option granted by this License or by the covered work itself.

A patent license is effective no sooner than (1) when you have received its terms; (2) when you have received notice of its terms and of any conditions on which it is available; or (3) when you have satisfactory evidence of a链条受该许可的许可人的通知，if and only if you have received a copy of the Corresponding Source under the terms of section 4 and stated in the notice that such material may be made available to you under the terms when you receive it.

12. Revised Versions of the License. The Free Software Foundation may publish revised versions of the GNU Affero General Public License, in which the Program specified in this License is modified to permit or require modifications to the Program corresponding to updates in technology, or other factors.

The GNU Affero General Public License is published by the Free Software Foundation.

There is no warranty for the Program, to the extent permitted by applicable law. Unless otherwise stated in this notice, The Free Software Foundation (FSF), a nonprofit educational organization, makes no representations as to the functionality or suitability of the Program.

No warranty or liability of any kind applies to these programs as such.

No warranty or liability of any kind applies to these programs as such.

There is no warranty for the Program, to the extent permitted by applicable law. Unless otherwise stated in this notice, The Free Software Foundation (FSF), a nonprofit educational organization, makes no representations as to the functionality or suitability of the Program.

No warranty or liability of any kind applies to these programs as such.

No warranty or liability of any kind applies to these programs as such.

No warranty or liability of any kind applies to these programs as such.

No warranty or liability of any kind applies to these programs as such.
YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH CERTAIN PROGRAMS, EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given legal effect according to its terms, reviewing courts may nonetheless choose to apply this License in such a manner that the recipient has fair protection from liability and damage.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. Use the same form of notice for any other material included in that program.

1. "Copyright (C) <year> <author>
   This is free software; you can redistribute it and/or modify it
   under the terms of the GNU Lesser General Public License as published by
   the Free Software Foundation; either version 2.1 of the License,
   or (at your option) any later version.
   This license is designed to protect your freedom to share
   and change it. There are other Free Software licenses,
   but we believe this one strikes the right balance.

   Everyone is permitted to copy and distribute verbatim copies
   of this license document, but changing it is not allowed.

   This license is intended to make a combination of the program
   with other programs possible.

   As a special exception, thequetel licensed under the LGPL
   version 3 may distribute in binary form.

   As a special exception, the program includes certain libraries
   that are covered by this license, but that are not part of the
   program. This exception applies to the library as a whole
   if, and only if, each constituent module -- the library,
   plus all other modules of its choice that are linked together
   as a combined library, to form a library that is used in
   an executable.

2. "Free Software Foundation License Version 3, June 2007
   Copyright (C) 2007, 2013, 2015 Free Software Foundation

   Everyone is permitted to copy and distribute verbatim copies
   of this license document, but changing it is not allowed.

   The Free Software Foundation may publish revised versions of
   this license, but not the work itself, under the name "GNU Lesser
   General Public License" (LGPL) Version 4 or later.

   This license is designed to make the program free for all
   those who want to use it. Notice that this license is quite
   different from a copyright license.

   Copyright (C) 2007, 2013 Free Software Foundation

   This license is quite different from a copyright license.

   This license, the GNU Lesser General Public License version 3
   (LGPLv3), applies to some special cases of works based on
   the GNU General Public License (GPL).

   Therefore, this license applies to certain libraries, and only
   those works based on the GPL but not on a higher version
   of the LGPL.

   As this license applies to a combination of the program with
   a library, the combination is defined as a "work that uses
   the Library" even if the Library is linked only "rump"ly with the
   program.

   The "Library" here refers to a collection of libraries or other
   parts of a program that face the user in a more or less independent,
   and relatively small, unit.

   A "work that uses the Library" is defined here as any project
   which incorporates, uses, modifies, or distributes the Library or
   its modified version(s), either by combining it (in whole or in
   part), in source or object form, with other programs (or a
   library) to form a larger program, or to modify the Library for
   the purpose of using in a library application.

   A "work that uses the Library" must be distributed under the terms
   of either this License, or (at your option) the terms of the
   GNU General Public License, which cover the main
   functionality of the program.

   However, each entity is free to use the name "GNU Lesser
   General Public License" (LGPL or LGPL) only in connection with
   libraries which are covered by the terms of this License.

   This License is referred to as the "LGPL" or "GNU Lesser
   General Public License".

   In order to specify whether a given library is covered by the
   LGPL, the Library must be designated as such in copying notice
   terms of this license.

   In addition to the terms of the LGPL, the Lesser General
   Public License also grants other permissions.

   A "library" is a collection of code and/or data that ends with
   a function that calls the function `_GLX_X()`. But first, please

   This License Agreement applies to any software library or other
   program which contains a notice placed by the copyright
   holder saying it is governed by the LGPL. This license applies
   to modulated versions of the Library as well. If a facility in the modified
   Library refers to a function or to a table of pseudocode in the Library,
   or vice versa, each entity is completely free to link the facility
   with any version of the Library as long as the modified library
   is itself a modified version of the Library, or if the Library was
   modified, so the modulated version is a modified version of the
   Library.

   The precise terms and conditions for copying, distribution and
   modification of the Library are as follows:

   1. You may copy and distribute verbatim copies of the Library's complete
      source code as you receive it, in any medium, provided that you
      conspicuously and appropriately publish on each copy an appropriate
      copyright notice, and provide a complete, machine-readable copy of
      the full source code of the Library including the copyright notice
      therein, without modification or alteration.

   2. You may copy and distribute in object code form or as compiled
      libraries, a work that uses the Library, as part of a whole which is a
      work based on the Library, under the terms of the license of a work
      that uses the Library.  The library library must be published under
      the terms of this License.  If the Library has been modified
      by someone else, you do not have to follow the terms of this License,
      but instead you may modify this License to reflect those changes.

   3. Each new version of the Library is released under the new terms
      of this License as published by the Free Software Foundation.
      You are supplied a copy of this License along with the Library,
      and modified versions of this License are allowed if two conditions
      are met:

      a) The Lesser General Public License and the ordinary General
         Public License are the only two licenses which satisfy this
         condition.

      b) The distribution of the modified version under the ordinary
         General Public License is permitted only if the entire
         resulting derivative work is distributed under the ordinary
         General Public License.  Once a work is covered by this License,
         either at version 2 or any later version, then the license for
         all its future parts is the ordinary General Public License
         unless you state otherwise on the担保人.

   4. If you distribute the Library (or a modified version of it), and you
      at the same time distribute an executable which is made up of
      part of the Library and part of some other program with which
      the Library is linked when it is loaded, then the the value of
      the ordinary General Public License will prevail in the
      combination of the Library with the other program.

   5. You may make a口the Library (or a modified version of it), and you
      must distribute the modified version under this License, too.
      This means that you must modify the Librar

   6. You may distribute the Library (or a modified version of it)
      under the terms of Section 1 above, provided that you include
      a complete copy of this License in the distribution.  If you refer to
      the full text of this License, please use the word "this License" as
      a single term and not "the ordinary General Public License''

   7. All new versions of the Library are made available as free
      software.  You can make changes to the Library, if you
      distribute it under the terms of Section 1 above, provided that you

   8. If you distribute the Library (or a modified version of it)
      with an executable which is designed to read a copy-protected
      program, and distribution of such an executable would violate the
      license agreement or copyright law of the place where you are
      distributing it, then you may offer, under the terms of this License,
      to distribute that executable only if the distribution of the executable
      with the Library, modified or unmodified, is permitted under the
      applicable copyright law without your permission; and provided that
      the executable is only used with the Library, and is not distributed
      separately under the terms of Section 1.  In addition, you may not
      offer modified versions of the executable.

   9. If the distribution of executable or object code form of the Library
      is the only means by which the public can use the Library, then
      the ordinary General Public License will govern all modification
      and distribution.

   10. Any attempt to transfer the rights under this License may be
       considered a breach of this License.  The terms, and the Th...
a) Accompany the work with the complete corresponding machine-readable source code, which must include any data and utility programs needed for reproducing the work in its executable form, under this License and modified oraur binary form) with the major components (compiler, kernel, and the modified executable containing the modified Library. It is understood that you user the contents of definitions files in the Libre will not necessarily be to recompile the applied modifications, if any.license the Library, object code and/or source code, so that the user can modify or reproduce the Library, and so forth containing
b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library, and (2) will properly initialize the library before using it. There may be other means of linking with the Library, but this must not so interfere with the basic purpose of linking. A suitable method is one that exhibits the following two properties: It must link (a) the library with all of the other code in your的应用程序you intend to distribute, and (b) after running your program (assuming that the library is not used solely for executables, then as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the Library and any executables made from it, after for at least three years, to give the same user the materials specified in Subsection 6.a. above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified material from the place with any other material included in the distribution.

e) Verify that the user has already received a copy of these materials either directly or indirectly by being distributed.

For an executable, the required form of the “work that uses the Library” means any application that contains the Library or a modified version of it (as a library) and that uses it to perform some of its function. A Combined Libraries, as defined in this section, includes either the Combined Library itself, in source or object code form, or any corresponding combination of the library with other software components, which use the combined Library.

For an executable, the required form of “work that uses the Library” means, unless otherwise specified, the combination of the executable with all the library files necessary for user application’s runtime environment, but excluding the source code of the library itself.

1.2. Subject to the terms of this License, each Contributor hereby grants You a worldwide, royalty-free, non-exclusive license, subject to third party intellectual property claims:

(a) for internal use (other than patent or trademark) Licensee by initial Developer to use, reproduce, modify, display, perform, sublicense and distribute the Original Code (or portions thereof) with or without Modifications, and/or as part of a Larger Work; and

(b) under Patents Claims infringed by the making, using or selling of Modifications, to make, have made, sell, offer to sell, have sold, import, or otherwise dispose of the Original Code (or portions thereof).

(c) the licenses granted in this Section 2.1.(a) and (b) are effective on the date Initial Developer first distributes Original Code under the terms of this License.

2. Source Code License.

2.1. Initial Developer. The Initial Developer grants you a world-wide, royalty-free, non-exclusive license, subject to third party intellectual property claims:

(a) for internal use (other than patent or trademark) Licensee by initial Developer to use, reproduce, modify, display, perform, sublicense and distribute the Original Code (or portions thereof) with or without Modifications, and/or as part of a Larger Work; and

(b) under Patents Claims infringed by the making, using or selling of Modifications, to make, have made, sell, offer to sell, have sold, import, or otherwise dispose of the Original Code (or portions thereof).

(c) the licenses granted in this Section 2.1.(a) and (b) are effective on the date Initial Developer first distributes Original Code under the terms of this License.

(b) Notwithstanding Section 2.1.(b) above, no patent license is granted: for any code that you delete from the Original Code; for any portion of the Original Code deleted from the Modification by you;

1.3. "Licensable" means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any of the licenses specified in this section, where such license will be effective as to third parties (in the ordinary course of their activity for others or in the case of copyrighted works, in whole or in part) to whom the Licensed Code is distributed.

2.1. Initial Developer. The Initial Developer grants you a world-wide, royalty-free, non-exclusive license, subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license.

(a) for internal use (other than patent or trademark) Licensee by initial Developer to use, reproduce, modify, display, perform, sublicense and distribute the Original Code (or portions thereof) with or without Modifications, and/or as part of a Larger Work; and

(b) under Patents Claims infringed by the making, using or selling of Modifications, to make, have made, sell, offer to sell, have sold, import, or otherwise dispose of the Original Code (or portions thereof).

(c) the licenses granted in this Section 2.1.(a) and (b) are effective on the date Initial Developer first distributes Original Code under the terms of this License.

2.1. Initial Developer. The Initial Developer grants you a world-wide, royalty-free, non-exclusive license, subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license.

(a) for internal use (other than patent or trademark) Licensee by initial Developer to use, reproduce, modify, display, perform, sublicense and distribute the Original Code (or portions thereof) with or without Modifications, and/or as part of a Larger Work; and

(b) under Patents Claims infringed by the making, using or selling of Modifications, to make, have made, sell, offer to sell, have sold, import, or otherwise dispose of the Original Code (or portions thereof).

(c) the licenses granted in this Section 2.1.(a) and (b) are effective on the date Initial Developer first distributes Original Code under the terms of this License.

(b) Notwithstanding Section 2.1.(b) above, no patent license is granted: for any code that you delete from the Original Code; for any portion of the Original Code deleted from the Modification by you;

1.3. "Licensable" means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any of the licenses specified in this section, where such license will be effective as to third parties (in the ordinary course of their activity for others or in the case of copyrighted works, in whole or in part) to whom the Licensed Code is distributed.

2.1. Initial Developer. The Initial Developer grants you a world-wide, royalty-free, non-exclusive license, subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license.

(a) for internal use (other than patent or trademark) Licensee by initial Developer to use, reproduce, modify, display, perform, sublicense and distribute the Original Code (or portions thereof) with or without Modifications, and/or as part of a Larger Work; and

(b) under Patents Claims infringed by the making, using or selling of Modifications, to make, have made, sell, offer to sell, have sold, import, or otherwise dispose of the Original Code (or portions thereof).

(c) the licenses granted in this Section 2.1.(a) and (b) are effective on the date Initial Developer first distributes Original Code under the terms of this License.

(b) Notwithstanding Section 2.1.(b) above, no patent license is granted: for any code that you delete from the Original Code; for any portion of the Original Code deleted from the Modification by you;

1.3. "Licensable" means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any of the licenses specified in this section, where such license will be effective as to third parties (in the ordinary course of their activity for others or in the case of copyrighted works, in whole or in part) to whom the Licensed Code is distributed.

2.1. Initial Developer. The Initial Developer grants you a world-wide, royalty-free, non-exclusive license, subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license.

(a) for internal use (other than patent or trademark) Licensee by initial Developer to use, reproduce, modify, display, perform, sublicense and distribute the Original Code (or portions thereof) with or without Modifications, and/or as part of a Larger Work; and

(b) under Patents Claims infringed by the making, using or selling of Modifications, to make, have made, sell, offer to sell, have sold, import, or otherwise dispose of the Original Code (or portions thereof).

(c) the licenses granted in this Section 2.1.(a) and (b) are effective on the date Initial Developer first distributes Original Code under the terms of this License.

(b) Notwithstanding Section 2.1.(b) above, no patent license is granted: for any code that you delete from the Original Code; for any portion of the Original Code deleted from the Modification by you;
3. Distribution Obligations.

3.1. Application of License. The Modifications which You create or to which You contribute must be made available under the terms of this License, unless You obtain permission for the modifications from the Copyright Holder. The word "Modifications" as used in this section includes the combination of the Code with other code (except as provided under Section 3.6).

3.2. Availability of Source Code. The Source Code for a Modification or new version must be made available in executable form under the terms of Sections 3.1 through 3.5 the same way as You did the Source Code available with the Code that You modified, unless You obtain special permission to alter the terms of this License, in writing, from the Copyright Holder.

3.3. Modification of Source Code. You may make changes to a file included in the Covered Code provided that You make it absolutely clear that those changes are your own creation and do not necessarily represent the viewpoints of any Contributor.

3.4. Verification of Source Code. You may distribute executables that You create based on the Source Code. If You distribute such executables, You must make them in a form that allows modifications to the Source Code for Your Modifications.

4. Redistribution of Executable Versions.

4.1. You may distribute Covered Code in Executable form under the terms of Section 3.1 through 3.5 if You follow these rules: (a) You must include a copy of this License with every copy of the Covered Code You distribute; (b) You must cause any notice in the Executable version or related documentation in which You describe the origin or ownership of the Covered Code to be identical to such notice in a location (such as a relevant directory) where a user must duplicate the notice in a form identical to that in which You received it; (c) You may distribute the Covered Code in Executable form only if the requirements of Section 3.1 through 3.5 have been met for that Covered Code, and You include a notice stating that the Source Code version of the Covered Code is available under the terms of this License, including a description of how and where You have fulfilled the obligations of Section 3.2. The notice must conspicuously state the version of this License under which the Source Code version is available, if any; and (d) You must include related documentation or collateral in which You describe recipients' rights relating to the Source Code version of Covered Code or ownership rights under a License of Your choice, which may contain terms different from this License, provided that You are consistent with this License. If You distribute the Executable version of Covered Code and not the Source Code, You must include a notice stating that the Source Code version of the Covered Code is available under the terms of this License, including a description of how and where You have fulfilled the obligations of Section 3.2.

4.2. Larger Works. You may create a Larger Work by combining Covered Code with other code not governed by the terms of this License and distribute the Larger Work as a single product. In such a case, You must make sure the requirements of this License are fulfilled for the Covered Code.

5. Inability to Comply Due to Statute or Regulation. If it is impossible for You to comply with any of the terms of this License, You may replace that term with another term that accomplishes the same or substantially the same purpose. The exception may be taken in good faith without compromising the essence of the License and the code they affect. Such description must be included in the LEGAL, file described in Section 3.4 and must be included with all distributions of Source Code of which it is a part, unless the extent prohibited by statute or regulation, such description must be sufficiently detailed for a recipient of ordinary skill to understand it.

6. Application of License.

6.1. New Versions. Netscape Communications Corporation ("Netscape") may publish revised and/or new versions of the License from time to time. Each version will be given a distinguishing version number.

6.2. Effect of New Versions. Once Covered Code has been published under a version of this License, no Contributor may use it under the terms of that version. You may also choose to use such Covered Code under the terms of any subsequent version of the License published by the Author as the Contributor may choose to make, provided that you agree to be bound by the terms of that version for the code that you use as of the date You last chose a newer version.

6.3. Derivative Works. If You create or use a modified version of this License (which You may only do in order to apply it to code which is not already Covered Code governed by this License), You must (a) rename Your license so that the phrases "Mozilla”, "MozillaPL”, "MozillaPL”, "Netscape”, "NetscapePL”, not necessarily the same, but any confusingly similar phrase do not appear in your license (except to note that your license disclaims from this) and (b) otherwise make it clear that Your version of the license is not the original Mozillas Public License and Netscape Public License.

7. DISCLAIMER OF WARRANTY.

7.1. Covered Code is PROVIDED UNDER THIS LICENSE ON AN "AS IS" BASIS, WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE VENDOR OR COPYRIGH HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THE COVERED CODE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

8. TERMINATION.

8.1. This License and the rights granted hereunder will terminate automatically if You fail to comply with terms herein and fail to cure such breach within 30 days of becoming aware of the breach. All sublicenses in the Executive or related documentation in which You describe the origin or ownership of the Covered Code, and (b) in any notice in an Executable version or related documentation in which You describe the origin or ownership of the Source Code, and (b) in any notice in an Executable version or related documentation in which You describe the origin or ownership of the Source Code.

9. LIMITATION OF LIABILITY.

9.1. UNDER NO CIRCUMSTANCES AND UNDER NO LEGAL THEORY, WHETHER TORT (INCLUDING NEGLIGENCE), CONTRACT, OR OTHERWISE, SHALL THE INITIAL DEVELOPER OR ANY CONTRIBUTOR BE LIABLE TO ANY PERSON FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY KIND (INCLUDING, WITHOUT LIMITATION, LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL COMMERCIAL DAMAGES OR LOSSES, INCLUDING CostS, DAMAGES FOR LOSS OF INFORMATION OR DATA, OR INCREASED COSTS OR LIABILITIES) ARISING FROM THIS LICENSE OR USE OF OR INABILITY TO USE THE COVERED CODE (INCLUDING, WITHOUT LIMITATION, ANY CLAIMS FOR LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL COMMERCIAL DAMAGES OR LOSSES, INCLUDING CostS, DAMAGES FOR LOSS OF INFORMATION OR DATA, OR INCREASED COSTS OR LIABILITIES), EVEN IF AN AUTHORIZED REPRESENTATIVE OF ANY INITIAL DEVELOPER OR SUBSEQUENT DISTRIBUTOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

10. U.S. GOVERNMENT END USERS.

Limitation on Liability.
This software is copyright (C) 1991-1998, Thomas G. Lane. All Rights Reserved except as specified below.

Permission is hereby granted to use, copy, modify, and distribute this software (or portions thereof) for any purposes, without fee, subject to these conditions:

1. Any part of the source code for this software is distributed, then this README file must be included, with this copyright and warranty notice unaltered, and in all documents and/or notices to users of the software.

2. If any executable code is distributed, then the accompanying documentation must refer to the independent JPEG Group as the original author, and must include the full name and contact information of the above email address. The original author reserves the right to publish updated versions of the accompanying documentation, and to document any contributions or modifications made by others; the original author shall not, however, be required to include such contributions in any distribution of the accompanying documentation.

3. Permission for use of this software is granted only if the user accepts full responsibility for its use. If you use the software, you ought to acknowledge us.

4. Permission is granted for the use of this software (or portions thereof) for any purposes, subject to the following limitations:

   a. The use of this software as the basis of commercial products, provided that all warranty or liability claims are assumed by the product vendor.

   b. Use of this software in applications where the integrity or reliability of the software is critical or in applications where the software may be modified or have a chance to participate in technical discussions, etc.

5. This distribution contains the sixth public release of the Independent JPEG Group's free JPEG software. You are welcome to redistribute this software, with or without modification, provided that the following conditions are met:

   a. Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.

   b. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

   c. The name "JPEG" must not be used to endorse or promote products derived from this software without prior written permission. For written permission, please contact mailto:jpeg@ijg.org.

6. You may make this software available to others under the following conditions:

   a. This software includes code written by John Gamblin, which the author wishes to distribute under the same conditions as the rest of the software.

   b. This software includes patents owned by IBM, AT&T, and Mitsubishi. Hence arithmetic coding cannot legally be used without obtaining one or more licenses.

   c. This software is copyrighted and distributed under a license; it is not free software, as specified below. The documentation for PCRE, supplied in the "doc" directory, is distributed under the same terms as the software itself.

   d. No warranty is available for this software, and no support of any kind is provided.

   e. The user is encouraged to redistribute this software as widely as possible.

   f. No liability can be assumed by the author for any damage or loss caused by this software.

   g. The author is not responsible for the effects of using this software.

   h. The author reserves the right to withdraw this license (or any other license that has been, or will be, granted under the terms of this License), and this License will continue in full force and effect until terminated as stated above.

10. The parties hereby confirm that the Publisher shall not, under any circumstances, be responsible for and shall not have any liability in respect of the subject matter of this License. The Publisher makes no warranty whatsoever whether or not the software is liable to You or any party on any legal theory for any damages which are, or may be, caused by the software.

11. Miscellaneous

   a. This License shall be governed by the laws of the location of the head office of the Author. The Author is an individual, the laws of location of the principal place of residence of the Author.

   b. If any provision of this License is invalid or unenforceable under applicable law, then any validity or enforceability of the remainder of the terms of this License, and without further action by the parties to this License, such provision shall be referred to the minimum extent necessary to make such provision valid and enforceable.

   c. No provision of this License shall be deemed waived and no breach of contract to unless such waiver or consent shall be in writing and signed by the party to be charged with such waiver or consent.

   d. This License constitutes the entire agreement between the parties with respect to the Work licensed herein. There are no understandings, agreements, or representations, express or implied, respecting the Work not specified herein. The Author shall not be bound by any additional terms or conditions communicated in any communication from You. This License may not be modified without the mutual written agreement of the Author and You.

The Independent JPEG Group’s JPEG software

Copyright (C) 1991-1997, Thomas G. Lane.

README for release 6b of 23-Mar-1998

This distribution contains the sixth public release of the Independent JPEG Group’s free JPEG software. You are welcome to redistribute this software and to use it for any purpose, subject to the conditions under LEGAL ISSUES, below.

Users of this software (particularly those incorporating it into larger programs) should contact IJG at ijg-info@ijg.org or at http://www.iijg.org to be added to the iijg-majordomo mailing list. Making list members notice updates and have a chance to participate in technical discussions, etc.

This software is the work of Tom Lane, Philip Gladstone, Jim Boucher, Lee Garth, Philip Levine, David Ross, Giulio Violitti, Ge Wilgers, and other members of the Independent JPEG Group.

It is not affiliated with the official ISO JPEG standards committee.

LEGAL ISSUES

In plain English:

1. We promise that this software works. (If you find any bugs, please let us know!)

2. You can use this software for whatever you want. You don't have to pay us.

3. You may not pretend that you wrote this software. If you use it in a program, you must acknowledge somewhere in your documentation that you used the IJG code.

In legalese:

The authors make NO WARRANTY or representation, either express or implied, with respect to this software, its quality, accuracy, merchantability, or fitness for any use. This software is provided "AS IS" and, by its use, assume the entire risk as to its quality and accuracy.

The PHP License

version 3.01

This SOFTWARE is PROVIDED BY THE PHP DEVELOPMENT TEAM “AS IS” AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE PHP DEVELOPMENT TEAM OR ITS CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

LICENSE ISSUES

The OpenSSL Toolkit stays under a dual license, i.e. both the conditions of the OpenSSL License and the original SSLeay license apply to the Toolkit. See below for the actual license texts. Also both licenses are BSD-style Open Source licenses. In case of any license issues related to OpenSSL please contact openssl-core@openssl.org.

The PHP License

Copyright (c) 1999 - 2008 The PHP Group. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the copyright notice, this list of conditions and the following disclaimer.

2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

The PHP License for use in the OpenSSL Project

Copyright (c) 1999 - 2008 The OpenSSL Group. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, is permitted provided that the following conditions are met:

1. Redistributions of source code must retain the copyright notice, this list of conditions and the following disclaimer.

2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

This software includes code developed by the OpenSSL Project for use in the OpenSSL Toolkit. (http://www.openssl.org)

The OpenSSL Toolkit and "OpenSSL Project" may not be used to endorse or promote products derived from this OpenSSL software without prior written permission. For written permission, please contact openssl-core@openssl.org.

5. Products derived from this software may not be called "OpenSSL," nor may "OpenSSL" appear in their names without prior written permission.

6. Redistributions of any form whatsoever must retain the following acknowledgment:

This product includes cryptographic software written by Eric Young (eay@cryptsoft.com). This product includes software written by Tim Hudson (tjh@cryptsoft.com).

PCRE 5 LICENSE

PCRE is a library of functions to support regular expressions whose syntax and semantics are as close as possible to those of Perl 5 itself. Release 5 of PCRE is distributed under the terms of the BSD licence, as specified below.

The PHP Group and the OpenSSL Project are the copyright holders of the PCRE 5 library. The copyright in the publicly published version of the PCRE 5 library is held by the OpenSSL Project, but the copyright in the library is held by the PHP Group.

Correct Disposal of This Product (Waste Electrical & Electronic Equipment)
(Applicable in the European Union and other European countries with separate collection systems)
This marking on the product, accessories or literature indicates that the product and its electronic accessories (e.g. charger, headset, USB cable) should not be disposed of with other household waste at the end of their working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate these items from other types of waste and recycle them responsibly to promote the sustainable reuse of material resources.

Household users should contact either the retailer where they purchased this product, or their local government office, for details of where and how they can take these items for environmentally safe recycling.

Business users should contact their supplier and check the terms and conditions of the purchase contract. This product and its electronic accessories should not be mixed with other commercial wastes for disposal.
